† Including a sum of £1,500 in respect of fisheries survey.

8. **Whaling Industry.**—The whaling industry in Natal waters was established in 1908 The species of whales found off the Natal coast include the following :—

		Oil Yield per Whale.
Humpback Whale	*Megaptera nodosa lalandii*	25–35 barrels.
Common Rorqual or Finner	*Balaenoptera physalus*	35–80 „
Blue Whale	*Balaenoptera musculus*	70–80 „
Rudolphi's Rorqual or Seihval	*Balaenoptera borealis*	10–25 „
Sperm, or Cachalot	*Physeter macrocephalus*	60–70 „
Spermaceti	—	10–15 „

Occasionally the Right Whale, or Noordkaper, is met with during the whaling period. The number of whales killed between the years 1908 and 1923 was 12,390. The Dolphin is abundant all the year round. The species found in Natal waters is *Gray's Tursiops catalania*, a species very destructive to shoal fish.

The subjoined particulars gives the results of the operations for a series of years :—

WHALING INDUSTRY, NATAL, 1920 TO 1924.

Particulars.	1920.	1921.	1922.	1923.	1924.
Companies operating.....No.	2	3	2	2	2
Capital invested.....£	424,047	524,027	428,000	427,475	427,982
Persons employed.....No.	489	736	400	521	815
Vessels employed.....No.	15	17	10	11	15
Whales captured.....No.	704	1,071	711	809	1,038
Oil produced.....Tons.	4,346	6,255	4,373	3,563	6,119
Fertilizers..... „	1,215	2,447	1,785	2,588	2,666
Boiled bone..... „	628	1,045	579	806	420
Whale finners..... „	23	27	12	19	18
Whale meat..... „	—	—	—	—	—
Value of production.....£	238,817*	188,800	126,127	147,351	191,779

* It is difficult for the companies to render accurate monthly returns, as most of the products of the whales are dispatched to European markets for sale on consignment, which necessarily means that the actual values are not obtainable until months later. Therefore, these figures must be treated as estimates only.

9. **Further Statistics.**—The following table gives the extent and value of the catch in Natal waters during a series of years, together with the average price per lb. :—

FISHERIES (EXCLUDING WHALING), NATAL, 1912 TO 1924.

Year.	Fish Landed.					Crustacea and Others.				Total Fish, Crustacea, etc.
	By Sea-going Craft.	By Seiners.	By Kraal.	By Licensed Anglers and by other means.	Total.	Prawns and Shrimps.	Crabs and Crayfish.	Turtle.	Oysters and Mussels.

Surf fishing-boats.....	55	41	41	32	35	33	45
Steam fishing-boats.....	9	6	5	6	8	9	11
TOTAL.....	64	47	46	38	43	42	56

§ 3. Fisheries Committee.

A Committee consisting of Col. G. T. Nicholson, M.Inst.C.E., Dr. J. D. F. Gilchrist, Mr. C. L. W. Mansergh, C.B.E., I.S.O., and Captain R. A. Leigh, with Mr. R. W. Fair as Secretary, was appointed by the Hon. the Minister of Mines and Industries towards the close of 1925 to inquire into and report upon—

(*a*) the construction or improvements of fishing harbours and shelters, and landing places for boats used in in-shore fisheries at suitable points on the coast, and
(*b*) the opening up and development of ports for the accommodation of—
  (1) trawlers and larger fishing boats used in deep-sea fishing; or
  (2) smaller craft used in in-shore fishing.

The report of the Committee has not yet been published.

§ 4. Inland Fisheries Survey.

The first report on the Inland Waters Fisheries Survey, dated March, 1926, has been issued by the Department of Mines and Industries, and deals with a preliminary survey of the rivers in the South-west districts of the Cape, the Cape Midlands and Border districts, Natal, and the Southern Free State, and their suitability for the introduction into and acclimatization of foreign varieties of fish. The investigator, Mr. S. A. Hey, concludes, *inter alia*, that it would be practicable to introduce successfully European or American varieties of salmon and sea trout into the rivers of the South-western Cape Province, and suggests the stocking with fresh-water trout, perch, or tench of many of the rivers hitherto unexploited in the areas visited.

CHAPTER XVI.

MINES.

§ 1. Organization of Mines Department.

The Mines Department is a separate division of the Department of Mines and Industries, which controls all mining and industrial matters within the Union, including the labour problem in certain of its aspects. The organization of the Mines Division has been built up from that of the Department of Mines of the Transvaal Republic, which was taken over by the Colonial Government at the conclusion of the South African War. When the Union was constituted the various Mines Administrations of the other Colonies were absorbed so as to form one Mines Administration for the Union under the Minister of Mines (now Minister of Mines and Industries). In the Republican days and during the régime of the Crown Colony Government, the head office of the Mines Administration was in Johannesburg under the Commissioner of Mines, but on the advent of Responsible Government in the Transvaal it was found convenient to move the head office to Pretoria so as to be in close touch with the Minister.

The organization of the Division may be summarized as follows :—

Office.	Functions.
Head Office, Pretoria—	
The Hon. the Minister of Mines and Industries Secretary for Mines and Industries..... Under Secretary for Mines and Industries	General administration of mining laws of the Union.
District Offices—	
Mining Commissioners— Johannesburg (including the Witwatersrand) Heidelberg..... Barberton..... Pietersburg..... Pilgrims Rest..... Klerksdorp..... Pretoria and Ottoshoop..... Bloemfontein..... Barkly West..... Cape Town..... Pietermaritzburg.....	Issue of all prospecting licences and mining titles under the Mining Acts of the four Provinces of the Union, including those dealing with diamonds, and carrying out local administration of those laws under the Head Office.
Registrar of Mining Titles, Johannesburg	The central registration of all Transvaal Mining Titles and Witwatersrand Township stands.
Engineering Branch— Government Mining Engineer, Government Mine Surveyor, Chief Inspector of Explosives, and Inspectors of Mines and Machinery and Explosives	1. Advisory to the Government on technical mining matters. 2. The safety of life and limb and the safeguarding of health in the working of all mines. 3. The licensing of all boilers and inspection of prime moving machinery in mines and works (*Mines and Works Act*, 1911). 4. The licensing and safety of persons in the manufacture of explosives (*Explosives Act*, 1911). 5. The issue of certificates of competency to persons employed in mining. 6. The valuation of mines and the surveillance of mines in which the Government receives a direct share of the profit.
Geological Survey, Pretoria— Director of Geological Survey and Geologists	Geological survey of the Union. Preparation of geological memoirs. Identification of minerals for the public.

§ 2. Statistics of Mineral Production.

1. **Value of Mineral Production.**—The table hereunder gives the total value of the principal minerals produced in the Union from the earliest dates of existing records. The value of gold is calculated at the standard rate of £4·24773 per fine ounce up to 1919, when the gold premium came into effect, as from the 24th July (see section 3, paragraph 16 below). Copper and tin are valued on the estimated pure metal contained in shipments according to the average current prices in London.

VALUE OF PRODUCTION OF PRINCIPAL MINERALS IN UNION UP TO 31st DECEMBER, 1924.

Classification.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	£	£	£	£	£
*Gold	21,947	86,094	835,546,724	—	835,654,765

3. **Wages Earned in Mining.**—The salaries and wages earned by European and other employees of mining and allied concerns during 1924 amounted to £17,733,534, distributed as shown in table (i) hereunder. Wages earned in lime works, salt works, and miscellaneous factories are not included in table (i). Earnings on alluvial diamond diggings cannot be ascertained with any degree of accuracy and are therefore excluded. Table (ii) shows in comparative form the earnings from 1910, and in table (iii) the amounts paid out in salaries and wages for a period of years are analysed according to Provinces and the race of the employees. In table (iv) are given particulars for a series of years of the aggregate and average earnings and payments to European employees on the Witwatersrand gold mines. These figures are calculated from the average number of persons actually in service. The actual average annual earnings of all the persons who find employment on the mines must necessarily be less :—

§ 3. Gold.*

1. **Bibliography.**—A bibliography of the principal publications recently issued dealing with the mineral resources of the country will be found at the end of this chapter. A comprehensive bibliography of publications on mineralogical subjects was included in *Official Year Book* No. 7 and previous issues, but has had to be omitted owing to demands for space.

2. **Gold and Diamonds.**—To the world at large South Africa's importance as a mineral producer is due to its being the principal source of diamonds and the most important producer of gold. The economic place of mining, therefore, in the history of South Africa is a large one, for the discovery of minerals has not only had an important effect upon the prosperity of the country itself, but has materially influenced the trade of the whole world.

3. **Historical.**—Though there is evidence that gold was worked by the ancients to a considerable extent in the northern portion of South Africa, there is little to show that there were early workings in any portion of the Union of South Africa. Going back to ancient history, southern Africa in former days was intimately connected with mining, and, all through the old records, mention is made of gold exports that did so much to

* This section (paragraphs 1 to 12) is a summary of articles by Mr. U. P. Swinburne, A.R.S.M., F.G.S., M.I.M.M., M.I.M.E., which appeared in previous issues of this *Year Book*.

enrich the eastern and north-eastern coast trade. The golden stories told by the old chroniclers were no doubt exaggerated, but they stimulated pioneering enterprise and caused numerous expeditions to be formed for penetrating the coast lands and getting into the rich gold-bearing interior of Monomatapa, Sofala, and other old African provinces. In former days the Portuguese were responsible for most of the exploration of the gold-bearing areas. Only the northern and eastern territories were exploited, and no gold had ever been obtained from the phenomenally rich Witwatersrand goldfield. Vague reports were, however, current regarding the existence of gold in the Transvaal for very many years before outputs were reported. The following are some of the cardinal dates in connexion with gold mining in South Africa :—

1868. Carl Mauch mentioned the existence of gold near the Olifants River.
1870. Gold found in the Murchison Range.
1873. Gold found in the Lydenburg District at Pilgrims Rest and extensive alluvial gold washing continued for many years thereafter.
1882. De Kaap goldfields started.
1884. The brothers Struben commenced quartz mining on the farm *Weltevreden* on the Witwatersrand and started a five-stamp battery.
1885. The Sheba Mine discovered, and Barberton founded.
1885. The first gold from the banket or conglomerate beds of the Witwatersrand panned.
1886. Johannesburg founded.
1887. The first stamp mill started working banket.
1887. Coal discovered at Boksburg.
1889. Formation of Chamber of Mines.
1890. First cyanide test works and start of the Robinson cyanide works.
1891. Chlorination works at the Robinson Mine.
1892. Extensive deep level companies formed.
1892. Opening of railway to Johannesburg via Orange Free State.
1893. Rand Victoria Borehole—Reef found, depth 2,343 feet.
1895. Bezuidenhoutville Borehole—Reef, 3,127 feet.
1905. Introduction of tube mills.
1909. *Sandfilling commenced at the Robinson Mine.
1911. Six hundred stamp mill erected at Randfontein.
1912. Successful operations on the Far East Rand attracted general attention.
1921. Deepest workings Turf Shaft, Village Deep, 6,110 feet.
1922. All-sliming process introduced.
1923. Amalgamating tables largely replaced by blanketing on the Witwatersrand.
1923. Osmiridium first won in considerable quantity on the Witwatersrand.
1924. World's deepest workings on Village Deep—6,662 feet on 31st December, 1924.

4. **Witwatersrand Gold Mining.**—The Witwatersrand goldfield is located on an elevated plateau, nearly 6,000 feet above the sea. The Witwatersrand (or Ridge of White Waters) projects somewhat above the plateau, and the outcrop of the conglomerate reefs can thus in a measure be said to be the dividing watershed between the Atlantic and Indian Oceans, the tributaries of the Vaal River draining into the Atlantic, and those of the Limpopo or Crocodile River into the Indian Ocean.

The conglomerate beds of the Witwatersrand are composed of quartz pebbles bound together by a siliceous cement containing iron pyrites. The name "banket," which has been given to the conglomerate from its general resemblance to an almond sweetmeat with this Dutch name, refers specially to the ore taken from the oxidized zone, which in the early history of the fields was called "free milling" and was found to extend to only a limited depth. The bankets occur in a series of quartzites and shales, which are known as the Witwatersrand beds, and which constitute a formation succeeding in age the archaic schists of Barberton.

The gold contained in the conglomerate is not often visible to the naked eye, occurring almost invariably in the matrix, its existence in the pebbles having been recognized only in rare instances. There are several series of these conglomerate beds in planes more or less parallel to each other. The most common designation of them, starting from the lowest geological horizon, is as follows :—Main Reef series, Bird Reef, Kimberley series, Elsburg and Black Reefs. Gold is found as an essential constituent in all the banket beds included in the foregoing list, but thus far the Main Reef series only has justified extensive exploitation, and even here only within certain limits.

Improved mechanical methods and labour organization have gradually brought all the chief gold mines to a similar basis as regards both mining and metallurgy and a very satisfactory extraction is obtained throughout the whole banket series of reefs. The success in working these large bodies of comparatively low grade ore may be assigned to the following causes :—(*a*) The adaptability of the cyanide process to the Witwatersrand ores;

* Sandfilling on the Witwatersrand is the transfer of the waste sand dumps underground through pipes and boreholes and filling up the old stopes, forming a permanent support to the excavations.

(*b*) the uniformity and character of the gold-bearing deposit; (*c*) cheap unskilled labour; (*d*) the proximity of coal deposits; (*e*) absence of heavy pumping charges; (*f*) good water supply.

Actual mining on the main gold-bearing area is greatly assisted by a very strong roof which supports all excavations made within reason and which requires a minimum of timbering and other supports in the shallower workings. This excellent roof or hanging-wall has its limits, however, and the enormous amount of ore extracted during the past thirty years is beginning to have effect over large worked-out areas causing large falls, earth tremors, and subsidences, and necessitating extensive sandfilling and other precautions to save existing workings and communication ways.

5. **Gold Production.**—(i) *Transvaal.*—The following table shows the progressive reef gold production of the Transvaal, which in 1924 contributed approximately 51·54 per cent. of the world's gold output:—

QUANTITY AND VALUE OF GOLD PRODUCED IN TRANSVAAL FROM 1884 TO 1924.

1906.....	5,792,823	24,606,336			
1907.....	6,450,740	27,400,992			

* War period. † Not including premium (*vide* paragraph 16 below).

In the early days of modern mining, accurate statistics were seldom available, but the total production of gold from the Union of South Africa from 1868, when gold was first discovered, to the end of 1924 amounts approximately to £836,000,000 including the premium, and the gold was practically all won in the Transvaal.

(ii) *World Production.*—Particulars of the world production of gold from 1913 are given in the following table:—

WORLD PRODUCTION OF GOLD, 1913 TO 1923.

ear.	Union of South Africa.		United States.	Canada.	Australia.	Mexico.	Southern Rhodesia.	British India.	Other Countries.	Total.

6. **Methods of Mining.**—The gold-bearing beds of the Witwatersrand are locally known as reefs. They are beds of conglomerate occurring in a pre-Silurian sedimentary formation and strike east and west and dip south. Speaking generally, the reefs are steep at the outcrop, flatten in depth, and again steepen somewhat in the deeper workings. In the early days inclined shafts followed the reefs from the outcrop; as depths increased either compound shafts, in which vertical shafts connected directly with underground inclines, or auxiliary underground incline shafts, provided with their own underground winding engines, were adopted. Recently many deep vertical shafts have been put down, and in some cases greater depth is being reached by auxiliary underground vertical shafts. Practically all development is done by air-driven machines, and though a good deal of stoping is still done by hand, machines—especially those of the small "Jackhammer" type—are generally used in stopes. Some mines obtain their compressed air by purchase from a large central power-station, while many use electric power developed in four central stations for hoisting and other purposes. With the increase in area from which reef has been removed and the greater depth of working the problem of securing safety from falls of rock has become more difficult and systematic building of packs, either of stone alone or stone and timber to support the hanging-wall, has had to be undertaken.

To prevent miners' phthisis, extraordinary measures by installation and use of water services for dust-allaying have for some years been adopted, and recently increased attention has been given to the provision and distribution of ventilation as a means of diluting and removing the dust inevitably formed despite all precautions.

A joint Committee appointed by the Government Mining Engineer and the President of the Transvaal Chamber of Mines to inquire into the questions relating to dust prevention, and ventilation in mine development, published its findings in an interim and final report appearing in the *Union Gazettes* of the 22nd of February, 1924, and the 15th of January, 1926. A practical method of dealing, by ventilation, with the dust produced by machine drills in development drives, was suggested, and the various precautions to be adopted to render its application effective were prescribed. A series of experiments in connexion with the ventilation of shafts, winzes, and raises was conducted and several conclusions were arrived at. Detailed recommendations were made as to the methods to be adopted in dealing with dust by ventilation under differing mine air conditions.

Previous issues of this *Year Book* (Nos. 1 to 4) contained fuller particulars as to methods of mining on the Witwatersrand.

7. **Metallurgy of Gold Production.**—The process of extracting the metal from the ore raised from the mines may be summarized as follows. In the first place, the valueless rock is sorted or picked out on picking belts or tables. The gold-bearing rock is then reduced to smaller size in jaw or gyratory stonebreakers, crushed finer in stamp mills and still finer in tube mills. Till recently the coarser free gold was recovered from the finely-crushed ore by the usual process of amalgamation on plates. In that method the ore from the stamp mills or the tube mills was carried in a stream of water over mercury-coated copper plates where the gold was caught as amalgam by the mercury. The amalgam scraped from the plates was "retorted," the mercury being distilled off and the gold "sponge" remaining in the retort subsequently melted down into bars. During 1923, however, amalgamation on plates was almost completely abandoned. Instead of using mercury on the plates, those are now covered by strips of corduroy cloth, the pile on which catches the particles of gold and other heavy minerals. The strips of corduroy are removed at intervals and washed in tanks of water from which the "blanket concentrates" or "black sands" are subsequently taken and passed over a Wilfley or other concentrating table. The richer and heavier portion separated on that table goes to an amalgamation barrel, while the poorer portion is returned to the tube mills In the amalgamation barrel the concentrate is ground by iron balls with mercury, which takes up the gold and is then "retorted" as though it were amalgam from plates. It may be mentioned incidentally that the concentrate from which the gold has been removed is again treated on a concentrating table and the osmiridium, which occurs in it in varying proportion at different mines, is separated and recovered.

The gold which escapes being caught by the corduroy is dealt with by the cyanide process. The coarser sand in the stream of pulp is separated from the finer "slime" in hydraulic classifiers. The gold is extracted from the sand by leaching in vats with cyanide solution, while the slime is agitated with cyanide solution which is separated again from the slime by decantation or filtering. The gold is obtained from both the sand and slime solutions by passing them over zinc shavings, or occasionally by mixing zinc dust with them, so that the gold will be deposited on the zinc, the resulting "gold slime" being then treated with sulphuric acid, filter pressed, calcined, and smelted.

The methods above outlined are modified at some mines. There is at present a strong tendency to resort to slime treatment only and to use tube mills rather than gravity stamps for pulverizing the ore. For instance, in new plants at New State Areas and West Springs Mines and in a later addition at Springs Mines, stamps are not used, but the ore from rock breakers and crushers passes to tube mills, where it is ground in cyanide solution, being

all eventually reduced to "slime." Zinc dust is used in each case to recover the gold from solution.

It is claimed that substitution of corduroy for amalgamated plates reduces the risk of gold thefts, and lessens the amount of gold "locked up" in the plant, as plates always retain much gold, while the percentage extraction of gold obtained is as good as with plates.

Similarly for "all-sliming," Merrill zinc dust precipitation and absence of gravity stamps it is claimed that the cost of plant, the cost of working, and loss of gold through theft, and the amount of gold "locked up" in the plant are all less, and that the extraction of gold is somewhat higher than with the older method.

The metallurgy of gold production was dealt with in fuller detail in previous issues of this *Year Book* (Nos. 1 to 4).

8. **Barberton Goldfield.**—The Barberton goldfield may be said to date from 1885 when the phenomenally rich Sheba Mine was discovered. Speaking generally, the field consists of a number of quartz mining propositions situated in an ancient schist formation and intersected by numerous dykes and intrusions of trap rock. The pay ore runs in chutes and in lenticular segregations often extremely rich at surface but becoming poorer in depth, and frequently cut off by igneous intrusions or dying away in the country rock. Some of the medium-grade mines, however, have maintained their values to the greatest depth hitherto attained by them. For a few years Barberton and the surrounding district produced a considerable amount of gold; but in late years it has taken a relatively small place in the gold production of the Union, the quartz mines being worked on a comparatively small scale by tributors, private owners, and small capitalists. In the Kaapschehoop and Jamestown districts a small amount of alluvial gold is still found from time to time, but at the present time the alluvial digger has ceased to exist in these districts.

A full account of this district will be found in Geological Survey Memoir No. 9: "The Geology of the Barberton Gold Mining District," by A. L. Hall.

9. **Pietersburg and Murchison Range.**—The quartz mines in the Pietersburg district were worked as early as 1870; and there are indications of small ancient workings on some of the gold-bearing reefs. The ore bodies here proved patchy and irregular, and the climate in the lower-lying parts of the area is very malarial in summer. An output of gold has been maintained by these outlying districts for many years past, but all the enterprises, where any considerable capital was employed, were failures, and mining, as in the Barberton district, is almost entirely in the hands of individuals working their own claims or in the hands of small syndicates. The bad climate and lack of transport facilities up to a recent date have prevented the Murchison Range and neighbouring goldfields from attaining a successful development in the hands of individuals and small parties of working miners.

For a full account of this district, *vide* Geological Survey Memoir No. 6: "The Geology of the Murchison Range and District," by A. L. Hall.

10. **Lydenburg and Pilgrims Rest.**—This is the most beautiful part of the Transvaal and has every facility for mining, including water for power and a healthy climate. Forty-five years ago Pilgrims Rest was an important alluvial goldfield, and it is the only part of South Africa that ever gave good results as an alluvial digging. Later the alluvial gold became worked out, and prospecting commenced on the mineralized bedded veins in the dolomites, quartzites, and shales found in this area. In some localities the exploitation of lodes in schist similar to that of the Barberton District has also taken place.

From a fairly early date this goldfield attracted capitalists and the more promising areas soon passed out of private hands into the possession of large companies which are still working the auriferous beds. From time to time small finds are made in areas outside the large concessions and company-owned ground, but the bulk of the present day output is obtained from the large companies.

A full account of these fields will be found in Geological Survey Memoir No. 5: "The Geology of the Pilgrims Rest Gold Mining District," by A. L. Hall.

11. **Alluvial Gold.**—At the present date it cannot be said that there are any important alluvial gold diggings in South Africa, although a few diggers still can be found prospecting the alluvial deposits in the Pietersburg, Barberton, and Pilgrims Rest districts, for in 1920 the output of alluvial gold was only 1,139 fine ounces from all Transvaal Districts. In 1873, and for some years following, a considerable quantity of so-called alluvial gold was won at Pilgrims Rest and Barberton districts until the deposits were worked out and the diggers turned their attention to the gold-bearing reefs and beds. At the Duivelskantoor the sandstones of the Black Reef series contain alluvial deposits of small extent and numerous nuggets of gold have been found in this locality. In 1898 a fifty-two-ounce nugget was found on the main coach road near the Duivelskantoor, and this nugget was shown at the Paris Exhibition in 1900. The gold from these fields has apparently been derived from the dolomites and other formerly overlying rocks which have now disappeared through erosion.

Alluvial gold recovered in the Transvaal from the date of the British occupation up to the 31st December, 1924, amounts to 34,064·543 ounces of fine gold.

Orders to the Geological Survey Office

Photolithographed at the Government Printing Works, Pretoria

In the Cape Province, from 1910 to the 31st December, 1924, 294·197 ounces of fine gold were obtained. In Natal, from 1910 to 31st December, 1924, 489·460 ounces of fine gold were obtained.

The total alluvial production of the Union to the end of 1924 was 34,848·200 ounces of fine gold.

12. **Future Production.**—The total amount of gold to be ultimately produced by the Witwatersrand has been at various times the subject of investigation and speculation, and publicity has been given to the following estimates of future production :—

(1) £325,000,000 by Mr. Hamilton Smith in 1893, from 11½ miles of the Central Witwatersrand to a depth of from 3,000 to 3,500 feet.
(2) £349,000,000 by Bergrath Schweisser in 1894, from 11½ miles of the Central Witwatersrand to a depth of 3,900 feet.
(3) £700,000,000 by Messrs. Hatch and Chalmers in 1895, to a depth of from 3,500 to 4,000 feet.
(4) £800,000,000 by Mr. John Hays Hammond in 1901, to a depth of 6,000 feet.
(5) £1,233,560,000 by Messrs. Leggett and Hatch, in 1902, to a depth of 6,000 feet excepting in the area east of Modderfontein where a depth of 4,000 feet was taken.
(6) The Transvaal Chamber of Mines in 1913 stated in evidence before the Economic Commission that from 42 of the 51 gold mines producing at that time there would be worked from a depth of 7,500 feet 550,000,000 tons of ore, which would yield in gold more than the cost of working, which would be £500,000,000 approximately.
(7) In 1914 the Transvaal Chamber of Mines repeated this statement to the Dominions Royal Commission.
(8) The Government Mining Engineer, in evidence before the Dominions Royal Commission in 1914, estimated the tonnage to be crushed from the mines producing at that time as 587,000,000 and from mines and areas not then producing as at least the same quantity.

The continuity of the Witwatersrand as a gold producer depends upon the practicability of mining at great depth and on the extension of the reef in the eastern area where great possibilities exist favourable to a large gold production. On account of the comparative great strength of the formation and the low rate of increase of temperature with depth, it should be possible to mine at greater depths than have been attained hitherto in any part of the world.

The limits of deep mining are governed by many causes and have been variously estimated at from 6,000 to 10,000 feet. It appears reasonably certain that, owing mainly to the low temperature gradient of 200 to 250 feet per degree Fahrenheit, mining can be carried on to a depth of at least 7,000 feet, where the grade of ore mined is sufficiently high to cover the high cost which must inevitably prevail at such a depth.

While unique in the extent of its resources the Witwatersrand must be looked upon as being on the average a low grade goldfield and, with only a few shillings per ton profit to work on, the question as to what companies can profitably continue to mine at great depths is inextricably bound up with the question of working costs, which is again largely dependent upon the supply and cost of labour.

The *Far Eastern Area*, referred to in the preceding paragraphs, has recently assumed a very important position in Witwatersrand mining, and it is from this district that a progressive output of gold may be looked for to take the place of the exhausted outcrop properties of the Central Rand and to counteract the diminishing output of a large group of mines that show a serious falling off in values at depth.

The *Far East Rand* contains the *Main Reef Series* over about 247 square miles, and for 203 square miles of this area the reef lies at a depth of less than 5,000 feet.

In addition to the properties at work in the developing and producing stage, the State owns a large number of undeveloped claims which are leased from time to time to companies capable of putting up the large sums of money necessary to bring these deep level mines to the producing stage.

The dip of the reef over almost all this eastern gold-bearing district is slight and there are portions of it of considerable extent in which the average dip is under seven degrees.

Mining and boring operations have shown that over almost the whole area only one reef has been or is likely to be worked and the average estimated stoping width is about 5 feet.

In most mines in this area there exist non-productive zones from which no ore is obtained, either because it has never been deposited or has been cut out through faulting or the intrusion of dykes or is so narrow in width or so low in value as to be unpayable. The percentage of non-productive zones varies from 15 to 80 per cent. in different mines on the basis of the existing relations between recovery and costs, and in estimating the possibilities of the ground still to be worked 60 per cent. of the area is assumed as non-productive.

While there are indications that the poorer ground lies in certain directions present day knowledge of the conditions does not permit any clear line of demarcation between payable and unpayable zones. The *Far East Rand* to-day contains most of the large dividend paying mines of the Witwatersrand.

The following statement from a recent report by the Government Mining Engineer affords some indication as to the probable extent of the decline in the gold mining industry on the Witwatersrand (including the Sub-Nigel) :—

The mines which crushed over 6,000 tons per annum during 1924 numbered 49 ; of these, 2 have already ceased operations and 4 have not yet had their lives determined for purposes of taxation. The official lives of the remaining 43 range from one to thirty years and average 7½ years. These official lives have been estimated upon a conservative basis and are likely to be exceeded, but if the estimates prove to be correct in five years' time 19 of these 43 mines will have ceased production, involving a decrease of 23 per cent. in the tonnage milled and of 17 per cent. in the amount of gold produced ; while in ten years' time 28 of these 43 mines will have ceased production, the resulting decrease as compared with 1924 in tonnage milled and in amount of production being 43 per cent. and 39 per cent. respectively. On the other hand, some of these mines have recently increased or are about to increase their production to an extent which will lessen the decrease in five years' time to 19 per cent. of the tonnage milled and 13 per cent. of production, and in ten years' time to 40 per cent. of tonnage milled and 35 per cent. of production.

The above forecasts take no account of unforeseen increases in the crushing capacity of existing mines, of new mines which may be opened up, or of the continuation of mining operations following on an exhaustive effort to extract the last possible remnants of ore prior to final closing down. It may be reasonably expected that these causes will operate to produce a smaller diminution of tonnage and production than is indicated. On the other hand, any substantial increase of costs whether due to taxation or to higher wages and supplies will tend to accentuate the decreases.

In the " Review of Economic Statistics," issued by the Harvard Economic Service, Mr. Joseph Kitchin estimated that the gold output of the Transvaal would fall to £29,000,000 in 1930, on the basis of an estimated production of £40,000,000 to £41,000,000 in 1924. He further forecasted that the total world production of gold would decline from £77,000,000 in 1924 to £74,000,000 in 1930. Allowance was made in this estimate for a possible variation of 5 per cent. in the actual figures.

13. **Mining Commissions.**—(i) *Report on the Development of the Mineral Resources of the Union.*—A Departmental Committee, consisting of Sir Robert Kotze, Government Mining Engineer (chairman), W. A. Caldecott, Esq., D.Sc., Department of Mines and Industries, and T. G. Trevor, Esq., A.R.S.M., Inspector of Mines, Pretoria, was appointed in March, 1924, to investigate and report upon the Mineral Resources of the Union. Owing to Mr. Trevor's absence from the Union his place was taken by Mr. A. L. Hall, M.A., Assistant Director of the Geological Survey.

The terms of reference were as follows :—

(*a*) The stimulation of mineral production in the Union.
(*b*) The existence of obstacles to the development and exploitation of the Union's mineral resources, with suggestions for the most practical way of removing such obstacles.
(*c*) The utilization of the Union's raw material products for the purpose of manufacture in South Africa.

The Committee's report is dated the 20th January, 1925, and was published in full in the *Journal of Industries* for the month of April, 1925. Its recommendations were :—

Reference (*a*)—

(i) An effective increase of the appropriation " district mining development."
(These are grants approved from time to time by Parliament for investigating the mineral possibilities of suitable areas and for allied aids to production. The appropriation for the year 1924–25 amounted to £4,000, which the committee considered quite inadequate.)
(ii) A more sympathetic policy in the matter of railway rates.
(iii) Financial relief in favour of known but undeveloped resources, by avoiding the taxation of capital devoted to supplies, equipment, and of working costs.
(iv) A bolder policy in regard to bounties, the cost in suitable cases to be met by a duty on competitive imports.
(The Committee considered that in *bona fide* instances a bounty on production would produce good results. The cost of bounties on the production of articles manufactured from South African mineral products could be met by a duty on competitive imports, which might be small at first but would gradually increase as local production expanded, until the bounty finally disappeared and the normal protective duty remained.)

(v) A comprehensive and sustained publicity campaign.

(The Committee emphasized the desirability of conducting a still better organized and more comprehensive and sustained effort to attract capital to the Union, and claimed that capital would be more readily attracted if the State gave the same practical support to the development of the country's mineral resources as it does to the agricultural industry.)

Reference (*b*)—

(vi) Amendments to the Gold Law to facilitate prospecting.
(vii) The introduction of a Reserved Minerals Bill in respect of alienated Crown lands.
(viii) The appointment of a Government agent in London to assist in the development of marketing facilities.
(ix) Provision of official grading certificates, where desirable.
(x) Taxation of the mineral industry on the basis of its net revenues only.
(xi) A progressive road policy.
(xii) Possible extension to the mineral industry of the Co-operative Societies Act, 1922.

Reference (*c*)—

(xiii) Preferential assistance; through investigation and, if justified, financial support of known but undeveloped resources.
(xiv) A more effective policy in the purchase of Government supplies.
(xv) Encouragement of oversea firms to establish local factories.

General reference—

(xvi) Provision of more effective means of inquiry and assistance through an extension of the economic functions of—
Geological Survey,
Government Mining Engineer's Branch,
Industries Division,
by the addition of staff and the general co-ordination and broadening of effort.
(xvii) Special efforts to develop the gold, coal, and iron industries, in view of their outstanding importance, actual and potential.

(ii) *Report of the Mining Regulations Commission.*—A Commission, consisting of Advocate W. Pittman, K.C. (chairman), J. H. Munnik, Esq., M.L.A., R. B. Waterston, Esq., M.L.A., and J. J. Wessels, Esq., appointed in November, 1924, to investigate—

(*a*) the effect on the accident rate and on the safety and health conditions in the Witwatersrand gold mines, in the coal mines in the Transvaal and the Natal Provinces, and in the copper mines worked by the Messina (Transvaal) Development Company, Ltd., of the present Mining Regulations dealing with the supervision of underground working-places, and the extent to which the present working of these regulations affects the good relations between employers and employees, and
(*b*) the present position on these mines in regard to the respective spheres of work of white and coloured persons,

issued its report on the 8th April, 1925 (U.G. No. 36—'25). The following résumé gives most of the outstanding findings of the Commission:—

(a) *The Regulations in Operation and their Effect upon Safety and Health Conditions.*—The Commissioners were of opinion that the regulations requiring the examination and making safe of working-places before work was commenced were not sufficiently stringent. The miner charged with the duty was seriously handicapped by being given more work than he could adequately perform in the time allowed him. A restriction of the number of working-places the miner was required to supervise was recommended, and the vagueness of many of the regulations which were found to admit of divergent interpretation was commented upon. Habitual or frequent contravention of regulations intended to safeguard the health and safety of workers was common, and attention was drawn to certain copper mines in the Transvaal and collieries in Natal where the charging of blasting holes was to a large extent performed by uncertificated natives. The causes contributing to the non-observance of regulations in the gold mines are considered by the Commission to be due chiefly to the tendency to enlarge the European miners' sphere of responsibility under the impulse of securing a maximum of output at a minimum of working costs. The growing efficiency of the native boss-boy, to whom the natives of the gang are disposed to look for supervision, has been instrumental in extending this responsibility, while reducing the European miner's control in many cases to a mere shadow. Another factor operating in the same direction is the paucity of the number of inspectors, and the resulting inadequacy of mine inspection. The character of the working relations between the Senior Inspectors, the Government Mining Engineer's Department, and the Mine Managements is vigorously

criticized, it being held that the atmosphere created by familiar association militates against the enforcement of managerial obedience to the regulations, and cases of exemption from regulations where no legal power to grant exemption existed, were observed. The very vagueness of some of the important regulations was held to be a further predisposing cause of contravention and imposed difficulties in obtaining legal convictions. Another factor mentioned as largely instrumental in producing breaches of the regulations was the "Contract System," which by reason of the incentive it gives the worker to accomplish a maximum amount of work during his shift tends to engender a disregard for considerations of health and safety.

(b) *The Ratio between European and Coloured or Native Employees.*—An examination of the figures over a series of years indicated a general tendency to increase the ratio between European and native employees in favour of the latter. This movement, attributed by the Chamber of Mines to the discharge of inefficient and redundant white workers following upon the reorganization effected after the strike of 1922, did not commend itself to the Commissioners, who, as a result of investigation and evidence taken on the subject, arrived at the conclusion that the cause was purely economic. By the introduction of machines, types of skilled labour at one time the exclusive prerogative of Europeans had passed into the category of semi-skilled, and were now almost exclusively performed by natives who had acquired considerable facility in the performance of the work. This insidious, tendency was continuing and was likely to be extended in other directions as the native acquired increased proficiency, and there existed grave temptations inciting managements to pursue this particular line of policy. For example (*a*) the *Living-in System*, which enabled the employers to feed and house the native at a minimum of cost, while subjecting him to a degree of discipline and control not possible in the case of white workers, (*b*) the *Indenture System*, which binds the native more closely to his employer and for more definite periods, and (*c*) *Compensation payable in respect of injuries and phthisis*, which is considerably less for natives than for Europeans.

A disquieting feature of the competition of natives in semi-skilled work is the gradual closing of these avenues to the white worker as a means of apprenticeship and ultimate entry into the skilled occupations. The South African-born man enters the mines with no previous knowledge of mining operations; this he acquires by a succession of experiences in the semi-skilled occupations, qualifying as best he can until he has learned enough to enable him to obtain a blasting certificate and thus become a fully qualified miner. The regulations framed under the Mines and Works Act of 1911 restricted certain employments to white employees, but in 1923 the validity of these regulations was tested in the Transvaal Division of the Supreme Court, which pronounced them *ultra vires*. No regulation can thus be framed restricting any particular occupation to white workers, and the Commissioners are of opinion from observations, despite assurances to the contrary, that in the absence of legislative prohibition the policy of replacing European by coloured workers will continue wherever economic conditions not glaringly opposed to health and safety appear to call for such substitution.

The Commissioners recommend that any legislation embarked upon should secure to mine workers generally an adequate measure of protection against accident and disease in the exercise of their dangerous and unhealthy calling, and rescue the European miner from the economic fetters which at present render him the easy victim of advancing native competition. There is a variety of occupations on the mines which the native of to-day is unable to fill without the gravest risk of danger to his fellow-workers. These for the present at least must be strictly confined to Europeans. To secure this result the *colour-bar* regulations should be re-enacted, the Mines and Works Act of 1911 being amended to this end.*

(iii) *Report by Cinderella-East Rand Proprietary Mines Commission.*—The Report of this Commission, consisting of W. S. Webber, Esq., M.L.A. (chairman), Sir R. N. Kotzé, Kt., W. E. Hudson, Esq., with G. H. Trevelyan, Esq., as secretary, appointed under the following terms of reference:—

(*a*) to inquire whether any equitable terms of amalgamation or other working arrangement between the Cinderella Consolidated Mines, Ltd., and the East Rand Proprietary Mines, Ltd., can be devised with the object of ensuring the opening up and working of the Cinderella Company's property in whole or in part, and the continuation of operations by the East Rand Proprietary Mines;

(*b*) to negotiate with the respective parties for the acceptance by them of such terms or working arrangement;

(*c*) to report to the Government the results of such inquiry and negotiations, and to make any further recommendations with reference to the matter which the Commission may consider desirable in order to achieve the object stated in (*a*),

* Enabling legislation is contained in Act No. 25 of 1926.

was issued on the 3rd December, 1925 (U.G. 18—'26). The Commissioners reviewed briefly the history of the two mining properties, and reported that after prolonged negotiations the parties had arrived at an agreement for amalgamation, which the Boards of Directors purposed submitting to their respective shareholders for confirmation. The Commissioners recommended the following conditions to the consideration of the Government :—

(*a*) That the Government should consent to the amalgamation.

*(*b*) That the Government guarantee the £250,000 second debentures of the East Rand Proprietary Mines, both as regards principal and interest.

(*c*) That as a condition of the amalgamation the Government agree to release both companies from liability in respect of undermining rights already acquired.

14. **Capital in Gold Mining Industry.**—(i) *Witwatersrand Gold Mines.*—In considering the return to investors in gold mining enterprises, opinions are at variance as to the best means of estimating the rate of profit. The usual practice with limited liability companies of quoting the percentage that the amount of dividend in any one year bears to the amount of capital issued is generally considered to be open to objection in the case of mining companies, as such capital does not usually represent the actual amount of money invested in the concern. The Actuary of the Transvaal Chamber of Mines in evidence furnished to the Mining Industry Board in 1922 took the figure of the total capital of Witwatersrand gold mines, admitted as amortizable by the Inland Revenue Department as at 31st December, 1921, and, using the amount of dividends for the year 1921 less the amount of amortization allowed for that year, arrived at a return of 4½ per cent. He, however, contended that as the amount of amortizable capital did not include capital issued for vendor's interest this figure would probably have to be doubled, thus reducing the rate of interest to 2¼ per cent. Since amortizable capital diminishes year by year, the basis of calculation, while possibly reflecting the position in the year mentioned, seems unsuitable.

Professor R. A. Lehfeldt, of the Witwatersrand University, in a paper read before the Chemical, Metallurgical, and Mining Society of South Africa in February, 1923, made a calculation based on the assumption that an imaginary investor had bought up the whole of the Witwatersrand gold mines in June, 1907, at market price, had supplied all the money required in the period for further capital, debentures, loans, etc., and had disposed of his investment at market price on 31st December, 1921. He deduced that over this period of fourteen and a half years the investor had received 6·2 per cent. on the sums invested in the beginning, and from time to time.

Taking the actual indebtedness of Witwatersrand gold mines, which includes issued capital, debentures, premiums, loans, and advances, amounting at 31st December, 1924, to £59,432,404 according to the statistics of the Government Mining Engineer, and comparing this with dividends paid, amounting to £9,557,657, a return of 16·1 per cent. is obtained for the year 1924. Similar figures for 1923 are—total indebtedness £68,137,988 and dividends £8,460,343, giving a return of 12·4 per cent. Any amounts appropriated from profits for working capital are not included in the "total indebtedness" figures quoted, as such amounts are not strictly funds received for which the industry is responsible to make some return, but may be deemed to be included in "costs." If for the two years mentioned the amounts of dividends are compared with the issued capital only, then the returns show 20·5 per cent. and 16 per cent. respectively. These figures are further analysed in the following table :—

DIVIDEND-PAYING, NON-DIVIDEND-PAYING, AND NON-PRODUCING MINES, 1923 AND 1924.

Year.	Dividend-Paying Mines.	Average Dividend on Issued Capital.†	Producing Mines Non-Dividend-Paying.	Non-Producing Mines.
	Number.	Per cent.	Number.	Number.
1923...	31	34·7	14	29
1924...	33	30·7	18	26

* The Government while agreeing to the amalgamation, which was ultimately arranged between the two mining propositions concerned, refused to guarantee the £250,000 second debentures.
† Of mines paying dividends.

(ii) *Outside Districts.*—In considering the return on money invested in mining enterprises in the districts outside the Witwatersrand, embracing gold, copper, and tin ventures, but excluding coal and diamond mines, the Inspector of Mines, Pretoria (Mr. T. G. Trevor), reviewed the operations of all the 464 concerns within his inspectorate which had been reported to the Mines Department during the ten years from 1904 to 1914. He divided the operations into four stages, viz.: (*a*) The preliminary prospecting stage, (*b*) the exploration prospecting stage, (*c*) the development stage, and (*d*) the producing stage. It was found that 141 ventures never got beyond the first two stages, 122 closed down after doing some development, and of the 201 mines which reached the producing stage, 70 were still producing at the end of the period. Of these 70, however, only 30 survived in May, 1919, the date of his review, 20 of which had been highly successful, 8 unsuccessful, and 2 doubtful. He estimated the total amount of money put into the whole 464 ventures as follows:—

	£
Stages (*a*) and (*b*)	70,500
Stage (*c*)	305,000
Stage (*d*)	5,085,000
	£5,460,500

and the value of the metals produced as:—

	£
Gold	7,740,438
Tin and Copper	2,792,721
	£10,533,159

The expenses incurred in wages and stores and on account of taxation and mining licences during the ten years were calculated at £8,766,336, leaving a balance of £1,766,823 to pay all other expenses, amortization, and interest for the period on the £5,460,500 capital, which is regarded as an insufficient return on the whole amount. Several of the successful enterprises, however, showed very handsome profits on the money invested in them, and are to be looked upon as the prizes, without which there would be no incentive to the raising of money for such speculative ventures.

The following tables, showing the liabilities and assets of Transvaal gold mines since 1911, contain particulars which are relevant to the question of the capital invested in the gold-mining industry:—

(i) TRANSVAAL GOLD MINES—LIABILITIES, 1911 TO 1924.

15. **Costs and Yield of Gold Mining (Witwatersrand).**—The following table of the number of tons milled, the yield per ton, the working costs, working profits, and dividends paid per ton milled and per fine ounce recovered for the Witwatersrand gold mines has been prepared from the annual reports of the Transvaal Chamber of Mines, and refers to the returns of member companies of the Chamber. Gold held in reserve, expenditure charged to capital account, interest on and redemption of debentures and profits tax have not been taken into account in arriving at the working profits. For various reasons the working profit shown is not in all cases the exact difference between the yield as shown and the working costs as shown, but in the yearly averages shown below the difference is very slight. The value of the gold premium has been included in the figures from 1919.

COSTS AND YIELD OF GOLD MINING—WITWATERSRAND, 1910 TO 1924.

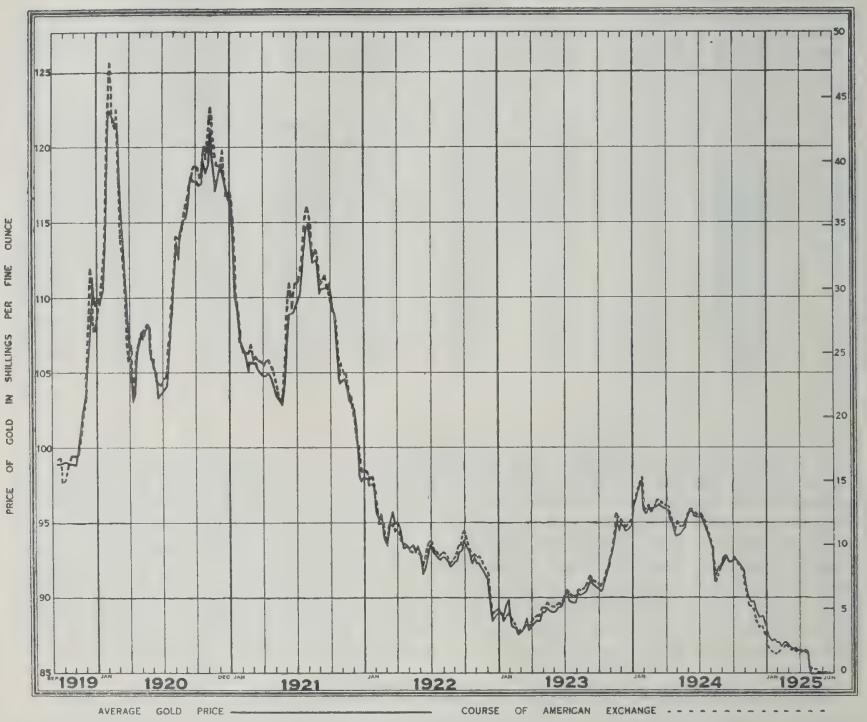
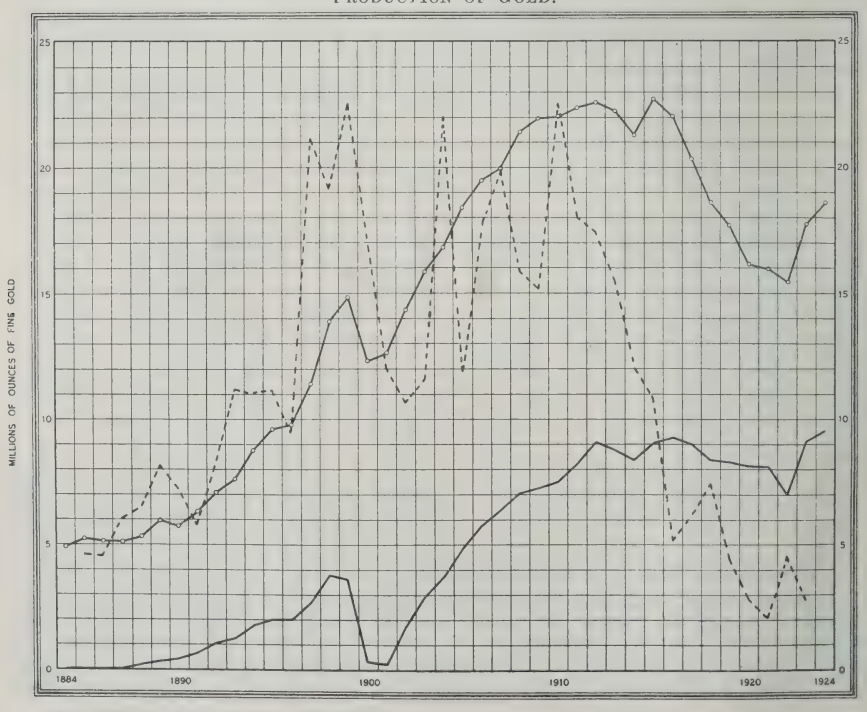
* Excluding period January to March. The cleaning up at Springs Mines and Modder "B" in December, amounting to 36,930 oz., value £141,732, is excluded from the calculations for 1922.

16. **Prices and Disposal of South African Gold.**—On the outbreak of war in August, 1914, it was deemed inadvisable to make weekly shipments of gold, but it was necessary to make arrangements whereby the mining companies could obtain cash for the payment of wages in the Union and supplies, etc., in London. An agreement was made early in August, 1914, under which South African gold was purchased by the Bank of England at the standard rate as soon as it was deposited in the South African banks in the name

COMPARISON BETWEEN THE PRICE OF GOLD IN LONDON AND THE APPRECIATION OF THE AMERICAN DOLLAR IN TERMS OF STERLING SINCE THE ESTABLISHMENT OF THE FREE GOLD MARKET IN 1919.



PRODUCTION OF GOLD.



of the Minister of Finance of the Union to the order of the Bank of England. The producers could then draw on the Bank of England advances up to 97 per cent. All charges for refining, insurance, freight, etc., had to be borne by the producers, which meant during the war increased reazliation charges of approximately £400,000 per annum. The charge for insurance and freight was fixed at 25s. per cent.

This agreement was terminated on the 25th July, 1919, from which date it was arranged that all gold deposited with South African banks would be shipped to England by the producers, consigned to the Bank of England, but sold by the producers' agents on their behalf in the best available market. Before that date 50,000 ounces of gold were released by the Bank of England for the purpose of a test or trial sale and realized, through the agents of the gold producers on the latters' behalf, 85s. 6d. per standard ounce or 93s. 5d. per fine ounce, an increase of almost 10 per cent. This was the beginning of what is generally known as the gold premium. Since then the price of gold has fluctuated greatly, reaching a maximum of 127s. 4d. per fine ounce on the 5th February, 1920, as shown in the subjoined table. As the currency of United States of America remained on the gold basis there is a close correspondence between the London-New York exchange and the price of gold. The graph on page 504 shows the variation in the price of gold and the appreciation of the dollar in terms of sterling.

The agreement made in July, 1919, was amended from the 1st August, 1923, when a new arrangement came into effect, by which producers were enabled to ship gold, including coin, to destinations other than the United Kingdom, on providing certain particulars to the Bank of England. As a result of this arrangement shipments of gold began to be made direct from Durban to Bombay.

Early in 1925 the continuous appreciation of sterling in terms of dollars, combined with the fact that the South African pound, when measured by the South African-London exchange rate, was at a premium with the English pound, made it profitable to bring gold to the mint or to sell it to the South African Reserve Bank.

Although the premium on gold in London existed until the 29th April, 1925, when Great Britain returned to the gold standard, gold was practically at parity in South Africa from the end of 1924.

The following table, showing the quarterly and yearly averages of the price of gold in London and the pound sterling in terms of dollars, has been constructed from the average of the daily quotations :—

17. **The System of Leasing of Gold Areas.**—The history of the development of the mining lease system, established under the Transvaal Act No. 35 of 1908, was recorded in the sixth issue of this *Year Book*.

Seven areas have been leased under the terms of Act No. 35 of 1908; particulars of these are given in the following table :—

GOLD AREAS LEASED (ACT No. 35 OF 1908).

Situation.	Extent of Area Leased (in Claims).	Company Working Area Leased.	Extent of Company's Holding, including Leased Claims.	Nominal Capital.
	No.		No.	£
Modderfontein No. 17	1,275	Government Gold Mining Areas, Modderfontein Consolidated, Limited	2,633	1,400,000
Modderfontein No. 17	1,358			
Brakpan No. 5	1,812	Brakpan Mines, Limited	3,387	1,020,000
Modderfontein No. 6	650	Modderfontein East, Limited	2,650 (approx.)	465,485
Rietfontein No. 14	2,236	Springs Mines, Limited	3,568	1,500,000
Elandsfontein No. 11	13	Craigie Mines, Limited	62	12,500
Doornfontein No. 5 and No. 24	27			
Geduld No. 24	932	New State Areas, Limited	2,108	1,500,000
De Springs No. 15	1,176			
Rietfontein No. 8	2,236	West Springs, Limited	2,236	1,573,190

† All these areas are on the Far East Rand with the exception of the small area of the Craigie Mines, Limited, which is in the Central Rand, on portion of the abandoned Treasury gold mine.

The terms under which these areas have been leased are practically identical, excepting those defining the share of the annual profits of the companies working the areas payable to the Government in consideration of the rights granted. The Government Gold Mining Areas, Limited, is the only lease company which is exempt from payment of taxation on profits of mining.

The share of the profits of the companies working these leased areas payable to the Government is in the case of the Modderfontein East, Limited, a fixed percentage of 10 per cent., but in the cases of other companies it varies with the ratio that the profit bears to the

recovery and is calculated upon a sliding scale so devised that the company receives a fixed proportion of any reduction in costs it may make and another fixed proportion of any increase in recovery it may effect, subject, in some of the leases, to minimum percentages.

The general form of the sliding scale is: $y = a - \frac{b}{x}$, where y is the percentage of profits payable to the Government, x is the ratio of profit to recovery expressed as a percentage and a and b are constants agreed to in the lease.

The following table shows the scale in each case and illustrates its results:—

LEASE COMPANIES—GOVERNMENT SHARE OF PROFITS.

Ratio of Profit to Recovery expressed as a Percentage.	Percentage of Profit Payable to Government.					
	Govt. Gold Mining Areas.	Brakpan.*	Springs.*	Craigie.†	New State Areas.	West Springs.
10	10·75	12·50	12·50	12·50	5·00	Nil.
20	24·08	12·50	12·50	12·50	42·50	32·50
30	35·62	12·50	15·83	14·00	55·00	43·33
40	46·33	21·25	25·62	22·00	61·25	48·75
50	53·56	27·00	31·50	26·80	65·00	52·00
60	58·39	30·83	35·42	30·00	67·50	54·17
Scale y =	‡	$50-\frac{1150}{x}$	$55-\frac{1175}{x}$	$46-\frac{960}{x}$	$80-\frac{750}{x}$	$65-\frac{650}{x}$

* During the first five years of the lease the percentage is the fixed one of 5 per cent., and after wards the scale is subject to a minimum of 12½ per cent.

† Subject to a minimum of 12½ per cent.

‡ $y = 5{\cdot}467 + 1{\cdot}06487\ x - \frac{53{\cdot}66}{x}$, where x is less than 36·1702, $y = 82{\cdot}5 - \frac{1446{\cdot}81}{x}$, where x is greater than 36·1702, subject to a minimum of 10·75 per cent. and a maximum of 61·25 per cent.

All seven of these companies had reached the producing stage by 31st December, 1924, and the Government's share of their profits up to that date amounted to:—

	£
Government Gold Mining Areas (Modderfontein) Consolidated, Limited	6,143,413
Brakpan Mines, Limited	303,086
Springs Mines, Limited	380,779
Craigie Mines, Limited	Nil.
Modderfontein East, Limited	17,497
New State Areas, Limited	117,689
West Springs	Nil

Under section 46 of the 1908 Act the powers of the Governor-General in regard to the leasing of mineral ground were restricted to areas each large enough, in the opinion of the Government Mining Engineer, to make one workable mining proposition, but in sections 2 and 3 of Act No. 30 of 1918 these powers are widened to permit the grant of leases of the undermining rights insufficient in extent to constitute workable propositions. These smaller areas are not advertised for tender, but are applied for by adjoining mining companies who are in the best position to work them. All such applications are submitted to the Mining Leases Board (the statutory body appointed to deal with all questions connected with the mining lease system) for report and recommendation, before the final approval by the Governor-General is given.

The Mining Leases Board deals also in a similar manner with applications for the under-mining rights of ground, such as *bewaarplase*, water-rights, machine stands, townships, railways etc., which have been vested in the Crown in terms of section 52 of Act No. 35 of 1908, and which are too small to constitute in themselves workable mining propositions.

Since the promulgation of Act No. 30 in June, 1918, to the 31st December, 1924, there have been disposed of to adjoining mines, under the terms of this Act and of section 52 of Act No. 35 of 1908, twenty-five areas, each of which was too small to constitute a workable mining proposition. Of these, fifteen, comprising 805 claims, have been sold for cash, and ten, comprising 1,430 claims, have been leased, including an area of 449 claims contiguous to a *mynpag* and leased to the owners thereof in order that the combined area should form a workable mining venture.

18. **Rand Refinery, Limited.***—This is a private company, the shareholding being confined to gold mining companies, members of the Transvaal Chamber of Mines. The works are situated at Germiston and the principal operations consist of refining the gold bullion produced by the gold mines on the Witwatersrand and elsewhere. The refinery was completed in December, 1921, and a note on its organization and activities will be found in the sixth and seventh issues of the *Year Book*.

The following is a summary of its operations since its inception on the 22nd December, 1921, to the 30th September, 1924 :—

§ 4. Copper.†

1. **General.**—Copper occurs in the Union in the Transvaal, Cape, and Natal Provinces but in Natal the deposits discovered have not been commercially exploitable. In the Cape Province the only deposits that have proved of much economic importance are those of Namaqualand, but at Areachap, to the west of Upington, a copper lode has been opened up in the Kheis quartz schists, whilst quartz veins carrying copper are also present in various parts of Hay, Gordonia, and Prieska, in the same and younger formations.‡ In the Mount Ayliff district of East Griqualand, copper pyrites and pyrrhotine have also been found, in association with nickel, and a certain amount of platinum, along the junction of the Karroo sediments with the great mass of intrusive norites forming the Insizwa Mountain.‡ In the Transvaal, the only producer so far has been the Messina Company, operating in the Zoutpansberg district, but there are numberless ancient surface workings for copper in the northern districts, and as development of the country proceeds, some at least of these will doubtless prove workable propositions. As this copper area lies in latitude 22° 15′ and at an altitude of less than 2,000 feet, it was at one time regarded as uninhabitable by white families, and in the early days the Messina Mine was frequently shut down owing to all hands suffering from malaria. Stringent anti-malaria precautions have since been taken, and it is satisfactory to note that the health conditions for several years past have been excellent, and that fever no longer causes any appreciable inconvenience.

2. **Discovery of Copper and Development of Mining.**—It is known that copper, tin, and iron deposits were worked by the ancients. Owing possibly to a lack of interest there is, however, very little information available as to the history of any such ancient industry in these metals, but very large workings for both are in existence and are probably partially contemporary with the gold workings. The copper deposits of Katanga (Belgian Congo) are enormous, having already a large output, although the producing stage has only recently been reached. The old copper workings of Rhodesia can be classed as comparatively small and have no great output at present. They cover a very large extent of country, but owing

* An article on the Royal Mint at Pretoria, which was established conditional upon the mining industry erecting a refinery, will be found in Chapter XXIII.

† This section is a summary of articles by Mr. U. P. Swinburne, A.R.S.M., F.G.S., M.I.M.M. M.I.M.E., Mr. T. G. Trevor, A.R.S.M., F.G.S., and Mr. G. E. B. Frood, M.A., M.I.M.M., which appeared in previous issues of this *Year Book*.

‡ Rogers and Du Toit: "Geology of Cape Colony."

to the low price of the metal have not been very extensively exploited. Further south and in the same class of mineral belt the Messina Copper Mines, situated on ancient workings, produced a steady output of mineral for a number of years. So-called ancient copper workings are also abundant elsewhere in the Transvaal, but whether these are the work of natives or of prehistoric miners of Indo-European stock has not been satisfactorily determined.

The existence of copper ore in Namaqualand seems to have been known since the earliest days of colonization, and in the days of Governor Simon van der Stel a futile attempt seems to have been made to turn the knowledge to account. The earliest shipment of copper ore took place in 1852 and was won at Springbokfontein, in Namaqualand.

The early efforts of the miners and prospectors do not appear to have been very successful, and it was only with the start of the great companies, with which the subsequent production of copper in the Cape Province has been almost exclusively associated, that the possibilities of the mines began to attract general attention. Of these companies, the Cape Copper Mining Company, Ltd. (now the Cape Copper Company, Ltd.) was registered in 1863, whilst the Namaqua United Copper Company, Ltd. (reconstructed since into the Namaqua Copper Company, Ltd.), followed in 1887. The success attending the operations of these two companies places them high amongst the great copper mines of the past. Their financial success, in particular, is evidenced by the former having returned to its shareholders between 1864 and the end of 1915 no less than £4,675,450, whilst the latter has distributed up to the end of 1916 dividends equal to 438¾ per cent. of its issued capital. In gauging these results, it has to be kept in view that, owing to the remoteness of the district and other circumstances, the working expenses and costs of realization have always been comparatively high.

At least a dozen mines have contributed appreciably to the copper output of this field, but the most important have been those of O'okiep and Nababeep, belonging to the Cape Copper Company, and Tweefontein owned by the Namaqua Copper Company. Each company, however, still owns smaller workings, which are called upon as occasion demands. The great decline in the price of copper, which commenced in 1918, led to the cessation of operations in the Namaqualand mines in April, 1919. Smelting operations were restarted towards the end of 1922.

Owing to local conditions, no attention was paid to base metals in the Transvaal until 1901, when a group of very extensive ancient surface workings on the lower Limpopo Valley attracted the attention of some Rhodesian capitalists. After several years of unsuccessful work, these were developed into the present Messina Copper Mine. Progress was rapid for a time as, starting with a production of 165 tons of copper for the year 1906, the output of metal had risen to 5,970 tons for the company's financial year 1914–15. Owing to the fall in the price of copper, however, production was suspended in May, 1920, but in the latter part of 1922 operations were resumed, and the mine was working at its full capacity from 1923.

3. **Production of Copper.**—The following table gives particulars of the value of copper sold in and shipped from the Union from 1857 :—

COPPER ORE SOLD OR SHIPPED, UNION, 1857 TO 1924.

* No record. † Average of 1911–14. ‡ Mining practically at a standstill.

4. **Ore Deposits and Methods of Mining and Treatment.**—Particulars of ore deposits and methods of mining and treatment were given in previous issues of this *Year Book*, but have not been repeated owing to exigencies of space.

§ 5. Tin.*

1. **Discovery and Mining of Tin.**—There is evidence to show that tin was worked in the past and some of the tin mines of to-day are on areas that were mined fairly extensively by the ancients. The ancient tin workings of the Transvaal and surrounding country are, so far as has been ascertained, confined to deposits and tin-bearing lodes in the granites, quartzites, and felsites, and none of the present-day alluvial tin areas had ever been worked by the ancients.

Cassiterite was discovered both in the Cape Province and in Swaziland in the final decade of the last century, but it was not till 1902 that serious attention was turned to its exploitation. Later, in 1904, cassiterite was also found in the Bushveld area of the Transvaal, a discovery which has since developed in an extremely satisfactory manner, so that the Transvaal has taken its place as a permanent and important producer of tin on the markets of the world.

Three areas are now producing tin: (i) Cape Province; (ii) Eastern Transvaal; and Swaziland (though this native territory is not politically incorporated in the Union, economically it has no separate existence, and is therefore mentioned in this statement); (iii) Transvaal Bushveld.

(i) *Cape Province.*—Cassiterite has been found at various points in the west of the Cape Province, but has only been worked to any extent in the neighbourhood of Kuils River, sixteen miles from Cape Town, on the Stellenbosch railway line. The tin is there found chiefly in association with quartz, but to a small extent also with greisen, in broken lodes traversing the granite of the Bottelary-Stellenbosch mass, close to its junction with the Malmesbury slates. Wolfram is also prominent in the lode matter, especially near the surface. These lodes have been opened up to some extent, and are said to have proved rich in places, but the very broken character of the deposits has hitherto militated strongly against successful exploitation. As the result of the denudation of the lodes, detrital accumulations of cassiterite have been found in the creeks leading down from the hills, and in the lower lying ground, towards the south. This alluvial has been worked with some success, as much as 300 tons of high grade concentrates having been reported as produced in the years 1906 and 1907.

The total tin shipped from the Cape Province up to 31st December, 1924, was valued at £61,427.

(ii) *Eastern Transvaal and Swaziland.*—The cassiterite in this area is only worked as alluvial, but it is undoubtedly derived from the many large pegmatite veins that traverse the older, or grey granite, which here makes the escarpment of the South African plateau. These pegmatites have not yet been found workable, though cassiterite crystals are not uncommon in them. This area is subject to a very heavy rainfall and strong denudation, and in the valleys running down into Swaziland ideal conditions exist for natural concentration. The tin fields extend on both sides of the border, but at present the production of tin is entirely confined to Swaziland, where one corporation holds a practical monopoly of the stanniferous area.

The ground is worked by hydraulicing and sluicing. The cassiterite is very coarse, and no mechanical dressing is required. About half a million cubic yards of ground is annually treated, giving about 1·8 lb. black tin per yard. The value per yard is given in normal times (with tin at £139) at 2s. 2d., and the total working cost at 11·6d. The concentrates shipped carry 71 per cent. metallic tin, and are remarkably free from any deleterious impurity. Many of the rarer minerals of thorium and tungsten are found in the concentrates, but not in commercial quantities. At the present rate of working it is stated that the known deposits are sufficient for twenty years. The export from these fields is about 300 tons cassiterite per year; but this is not included in the returns for the Union.

(iii) *Transvaal Bushveld.*—In the central or Bushveld area of the Transvaal, cassiterite was first discovered in 1904. This area is geologically notable as consisting of an immense lacolite of red granite, intrusive between the Pretoria and the Waterberg formations. With its subsidiary felsites and contact zones of metamorphic alteration this covers an area some 250 miles from east to west, by 100 miles from north to south. Cassiterite is found both in the granite and in the felsites and sedimentary rocks in direct contact with it. In the felsites the mineral occurs irregularly along joints and bedding planes, and so far the workings in this rock have never been attended with success.

In the sedimentary rocks, the Rooiberg and Leeuwpoort mines have been working most successfully in fissure veins, traversing a mass of quartzites and shales, of undoubted sedimentary origin, which are enveloped in the granite. At Rooiberg these veins are vertical, and do not carry more than 1 per cent. to 1·5 per cent. of tin, but their value consists of lateral enrichments which pass off into the bedding planes of the country rock

* This section is a summary of articles by Mr. U. P. Swinburne, A.R.S.M., F.G.S., M.I.M.M., M.I.M E., and Mr. T. G. Trevor, A.R.S.M., F.G.S., which appeared in previous issues of this *Year Book.*

and give pockets and bonanzas of phenomenal richness. Unfortunately these offshoots have only so far been found near the surface, none of importance having been encountered below 100 ft. At Leeuwpoort the veins are not highly inclined, and are richer in themselves than at Rooiberg, but, on the other hand, only one notable enrichment in the country rock has been found.

Besides pyrites, specularite, and a small amount of mispickel, no other metallic minerals are of obvious occurrence in these deposits.

The character of the deposits at Rooiberg and Zaaiplaats and the methods of mining were more fully described in previous issues of this *Year Book* (Nos. 1 to 4).

The crushing and dressing plants on the larger mines are thoroughly well equipped and up to date. After the preliminary concentration the concentrates are calcined and redressed, the resultant cassiterite for export containing from 65 per cent. to 70 per cent. metallic tin. All the cassiterite produced is exported to the Malay States, a more favourable market for the class of product being obtained there than in England.

In 1917 the Zaaiplaats Tin Mining Company began smelting tin for consumption in the Union. This was a war measure, and was successful during the war, but was discontinued in 1921, when normal conditions returned.

Smelting was also started at Leeuwpoort and was continued during the period of the war, but, owing to the impure nature of the ore, work was discontinued soon after peace was declared.

With regard to the permanence of the production of tin in the Transvaal, the area over which it occurs is so large and the difficulty of locating the outcrops of the pipes so great, that though it seems unlikely that any great expansion will occur, at any one period, yet it is probable that the discovery of new properties will go on for very many years.

2. **Production of Tin.**—The production of cassiterite in the Union since 1911 has been as follows :—

PRODUCTION OF TIN IN UNION, 1911 TO 1924.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons. (2,000 lb.)	£		Tons. (2,000 lb.)	£
1911.....	3,533·729	411,871	1918.....	2,206·042	440,995
1912.....	2,932·208	367,699	1919.....	1,630·168	277,925

1917.....	2,678·560	346,016	1924.....	2,051·120	305,398

§ 6. Other Metals.*

1. **General.**—The exploitation of the mineral resources of South Africa has been of such recent growth, and the expansion of the gold, diamond and coal industries has been so rapid and so profitable, that nearly all the available capital had been devoted to those industries, and in the past it has usually been only as a matter of accident that the presence of other minerals has been recorded. In the last ten years, however, the profitable exploitation of the tin mines and of the Messina Copper Mine has turned more attention to the question of base and rare metals, with the result that valuable finds of the rare metal platinum have been made, and these discoveries will lead to increased activity in prospecting for other minerals. The Union of South Africa is undoubtedly exceptionally rich in minerals of every description.

2. **Antimony.**—This occurs as antimonite in the gold reefs of the northern line of the Murchison Range in the Zoutpansberg District of the Transvaal, in a very pronounced contact zone. The reefs extend for some thirty miles. They are to a certain extent lenticular, but occurring again and again on the same horizon, and being up to 20 feet in width, make workable masses of ore, which have been developed down to a depth of 200 feet.

* Summarized from articles by Mr. U. P. Swinburne, A.R.S.M., F.G.S., M.I.M.M., M.I.M.E., and Mr. T. G. Trevor, A.R.S.M., F.G.S.

The ore contains from 6 per cent. to 60 per cent. antimonite, and from 3 dwt. to 1 oz. of gold to the ton. Formerly the antimony was regarded as worthless, and as preventing the working of the gold. Recently a railway has penetrated the neighbourhood, which is only some 200 miles from the port of Delagoa Bay, and a considerable quantity of hand-picked antimonite was exported during the early part of the war period. An attempt was also made to work one mine by a wet process, which included the solution of the antimonite in caustic soda and the recovery of gold from the residues by cyanide. This process, however, failed, and the mine is now shut down.

During the war period a certain amount of fused antimonite was produced by one mine. This was reduced to antimony in Johannesburg, and was used by the South African Railways for the production of white metal. Since the declaration of peace this work has been closed down.

Antimonite also occurs and has been opened up, showing a workable mass of ore, in the Steynsdorp Division of the Barberton district.

3. **Arsenic.**—This occurs as arsenical pyrites in certain gold and tin ores, and is won as arsenious oxide by the condensation of the fumes obtained when these ores or their concentrates are roasted for further metallurgical treatment. Hitherto only three mines, the Consort and the Maid of de Kaap gold mines, near Barberton, and the Stavoren tin mine in the Waterberg District, have produced arsenic.

The Union consumes close on £100,000 worth of arsenic per annum, for sheep and cattle dips and for poisoning locusts and other insects, and it is very desirable that further arsenic deposits should be developed.

4. **Asbestos.**—In the Cape Province, the Cape Asbestos Company, the first producer, commenced operations in 1893. In the Transvaal very promising deposits of asbestos of excellent quality have recently been found. The output from this Province, as well as from the Cape, has increased considerably during recent years. Asbestos occurs in Natal, and the deposits have recently received attention.

5. **Barium.**—The existence of barytes has been noted in the Transvaal at several points in the bushveld area, and also at Saltpetre Kop and Spiegel River in the Cape Province, but so far there has been no attention paid to this mineral.

6. **Bismuth.**—The occurrence of bismuth has been reported in some of the gold ores of the Sabie district, and in one of the tin mines (Stavoren), but neither occurrence is of commercial importance.

In 1897 a very rich mass of bismuthite, from which several tons were extracted, was found on the farm Geweerfontein No. 604, in the bushveld granite area of the Transvaal. A certain amount of work has recently been done on this deposit, but with indefinite results, and the work is now suspended, though indications point to the fact that this is one of the pipe-like deposits of this area from which any results may be obtained.

7. **Chromium.**—For several hundreds of miles along the margin of the bushveld granite area in the Transvaal, pseudostratified segregations of chromite have been noted.

In the Lydenburg District these segregations are several feet in thickness, and are being worked. The deposits usually contain from 35 per cent. to 45 per cent. chromic oxide, but samples have been obtained yielding up to 54 per cent. Until recently these deposits were fifty miles from rail-head and transport expenses prevented the working of them successfully.

With the completion of the Lydenburg–Steelpoort railway, the difficulty of transport has been solved, and while the output of chromite is not great at present, it is steadily increasing as the product becomes known in the overseas markets.

8. **Cobalt.**—Cobalt was one of the first minerals to be worked in the Transvaal, an extremely valuable complex ore, which fetched several hundred pounds per ton, being exported from the farm Kruis River, in the north Middelburg District of the Transvaal, in the early eighties of the last century. The deposit occurred in the contact zone of the bushveld granite, but owing to its irregularity, the mine soon closed down, and has not been reopened. Several other cobalt deposits, also connected with the bushveld granites, were opened in 1906 near the railway at Balmoral. These mines were never carried to the producing stage, but, with the attention which is now being paid to this mineral, it is probable that they will soon receive renewed attention.

Some notes by Dr. E. T. Mellor, on the field relations of these Transvaal cobalt lodes were published in the Transactions of the Transvaal Geological Society for 1915.

9. **Iron.**—Iron deposits exist all over South Africa and have been worked in bygone ages by a varied class of worker whose traces are still distinguishable, but whose records are too faint to form any reliable history. All through the country the inhabitants and others have probably worked the richer iron deposits in a crude way, smelting large quantities of iron for tools, and as a medium of exchange, while making various pigments from the iron oxides. As all the smelting was done with charcoal, an excellent class of iron was obtained.

The interest taken in South African iron deposits is gradually increasing. With high working costs and a limited market there did not until recently seem to be any prospect of an iron industry for many years to come. The continued shortage of supplies of iron and the high price due to the War have, however, put a new complexion on the case, and three smelting propositions are now being developed. Two establishments, at Vereeniging and Boksburg, for the working up of scrap iron have been in successful operation for some years, and have proved of great utility in the general scarcity of steel and iron.

Previously to the year 1910 it was believed that the huge masses of magnetic iron ore, which are obvious throughout the margin of the Transvaal bushveld and in many of the older schistose areas, were valuable iron ores. The great beds of siliceous ore, which occur in the Transvaal system especially around Pretoria, were also regarded in the same light, and, therefore, no further work either in prospecting for iron ore or in recording deposits was ever undertaken. In that year Mr. Harbord was brought out to South Africa by the Union Government to report on the prospects of starting an iron industry on these deposits.

Mr. Harbord's report was distinctly discouraging, as he pointed out that a titaniferous ore is not at present workable under economic conditions, while the siliceous ores were of themselves too siliceous to be payable. This report, while condemning the deposits then known, has had the most beneficial results. Finding that these obvious deposits were unworkable, attention was immediately drawn to other deposits, of which up to that time no notice had been taken, and extremely good ores have, as a result, been found in vast quantities.

Several companies have been formed for the smelting of ores and production of steel. These are :—

(1) *Vereeniging* and (2) *Newcastle, Natal.*—The smelting works of the Union Steel Corporation of South Africa, Ltd., at Vereeniging, work up iron and steel scrap, and during 1924 produced 21,051 tons of a value of £330,640. The bulk of the output is produced by smelting in open-hearth furnaces, but there is also one Heroult electric furnace for special steel castings. The company recently amalgamated with a company which erected smelting works at Newcastle,* but did not reach the producing stage. These works are being brought to completion, and it is intended to smelt iron from ores in northern Natal. The capacity of the plant is 50,000 tons of pig-iron per annum.

(3) *The South African Iron and Steel Corporation, Ltd.*—This company has works for the smelting of iron from ores at Pretoria, but these are standing idle pending the raising of further capital.

(4) *The Dunswart Iron and Steel Works, Ltd.*, and

(5) *The Witwatersrand Co-operative Smelting Works, Ltd.*—These two concerns are established on the Witwatersrand and produce steel from scrap.

The total amount of iron and steel goods produced in 1924 by the companies mentioned under (1), (2), (4), and (5) was 31,828 tons of a value of £522,549. They gave employment to 343 white persons and 919 coloured.

Very large deposits of iron ore of excellent quality occur at various places in the Union, but some of the best are not yet easily accessible by rail. Coke suitable for smelting is available, as is also limestone for fluxing.

A general report by Professor Stanley on the iron and steel industry in South Africa appeared in the *South African Journal of Industries* for May, July, and August, 1920.

10. **Lead.**—Before the introduction of breechloading arms and fixed ammunition, lead for bullets was smelted in the Transvaal, but the introduction of fixed ammunition killed that embryo industry. Later, in 1892, an argentiferous galena was mined, and smelting works were erected, near the present railway station of Argent, some fifty miles east of Johannesburg. Owing to the circumstances existing at the time, these works shut down in 1896. Recently they have been reopened and productive operations have been initiated. There is in this locality a small mass of intrusive granite, similar to that of the bushveld, and surrounded in a similar manner with a norite margin. In this norite highly inclined galena-bearing fissures occur. These are up to a few feet in width.

Galena also occurs very widely diffused in irregular deposits in the dolomite. Formerly these deposits were only exploited in a very small way to supply some local ore reduction work on the Rand. Recently, however, it has been discovered that some of the deposits, in the outcrop at least, are rich in vanadium.

11. **Mercury.**—Traces of native mercury have been reported from various parts of the country, but most of these are probably due to accidental salting. In the Barberton district, cinnabar occurs in the contact zone between the sedimentary formation, and the granite that is intrusive in it. The quantity of cinnabar in the ore (an altered quartzite)

* This company commenced producing pig-iron smelted from South African ore in June, 1926.

appears almost payable. The claims containing the deposit have been held for years, and a good deal of money spent in developing them, but so far no attempt actually to extract the mercury has been made.

12. **Manganese.***—Manganiferous earth of inferior quality is of frequent occurrence in the Transvaal. Pyrolusite of good grade occurs in the form of veins in the older rocks of the Cape Province, and in the neighbourhood of Pretoria, but the veins are in all cases small and much mixed with gangue. At the present time a few tons per month are being mined at Pretoria for use in the cyanide works of the Rand, but otherwise no commercial attention is being paid to the mineral. In the Krugersdorp district, on the farm Elandsvlei, and on neighbouring farms, there are large lateroidal deposits of high grade pyrolusite from which cobbed ore containing 59 to 63 per cent. Mn O2 can be obtained. These deposits, which occur in areas from which the dolomite has been almost but not quite denuded, appear to be of very considerable extent, and are easily mined. Supplies of this mineral quite equal to any local demand which may spring up, will, therefore, be obtainable at an economic price, but it is doubtful whether it will be possible to develop a profitable export trade.

All the known details with regard to manganese in the Union appear in the article on manganese in the *Journal of Industries* for January, 1919.

13. **Molybdenum.**—This occurs in Natal as molybdenite, disseminated through a horizontal sedimentary sandstone of Karroo age in the neighbourhood of certain igneous intrusions, but its extent is not yet known. It also occurs in the northern Transvaal and in Namaqualand, disseminated through pegmatite veins in the granite and gneiss, also in the tin pipes of the bushveld area.

So far this mineral has not been sought for, nor have occurrences been developed, and it is quite possible that payable deposits may be found if attention is directed to it.

14. **Nickel.**†—The occurrence of nickel has been noted in many parts of the Transvaal bushveld complex, in the Barberton area, in the Cape Province, and also in Natal, but the only three deposits which appear at the present time to have prospects of economic importance are those at Insizwa in the Cape Province, at Vlakfontein No. 902 in the Rustenburg District of the Transvaal, and in the Barberton district. At Insizwa and Vlakfontein the ore occurs as pyrrhotite mixed with calcopyrite and pentlandite, and is apparently formed by a magmatic concentration in the base of large norite sheets.

At Vlakfontein a considerable amount of prospecting has been done, and the results justify further work, but this is unfortunately beyond the means of the present owners, who are attempting to get more capital into the venture.

At Insizwa development is proceeding by means of a long adit calculated to tap the deposit at depth, but this adit has not yet reached its objective.

At Barberton a sedimentary bed has recently been discovered carrying a nickel ore of up to 25 per cent. The bed is up to 3 feet in thickness, and though not yet developed, appears to be permanent in character. The ore appears to occur in the form of an entirely new mineral—a magnetic iron-nickel oxide. Sulphur is absent, and the mineral reduces easily and runs down into a metallic button carrying about 54 per cent. nickel. If the deposits open up well, the mine should prove valuable.

A full description of the occurrences of nickel known in the Union at that date, and of these deposits in particular, appeared in the *Journal of Industries* for November, 1919, while a preliminary report on the Barberton occurrence was published in the same Journal for June, 1920.

15. **Platinum, Etc.**—The occurrence of platinum and the allied group of metals has been noted in some of the igneous rocks of the country, and in the black sands derived from the concentration of the Rand conglomerates in the process of extracting the gold. In the last few years a considerable quantity of osmiridium has come into the market from this latter source. The quantity is likely to increase as the processes by which osmiridium is recovered become adopted on a greater scale.

In 1924, the amount of osmiridium recovered on the Rand was 4,107·481 ounces, valued at £102,886, and in 1925 the recovery was 6,055·260 ounces, of a value of £170,995.

In 1923, platinum was discovered in a brecciated quartz lode near Naboomspruit in the Transvaal; the values, however, were very erratic, and at present this reef is not being worked.

At the end of 1924 platinum-bearing rocks were located in the Bushveld Igneous Complex in the Lydenburg District of the Transvaal. A bed of norite was there found containing from 2 to 5 pennyweights of platinum per ton over a width of 3 feet and upwards.

---

* See *Journal of Industries*, January, 1919. † See *Journal of Industries*, November, 1919.

This reef, which dips at 12 degrees to the west, runs roughly north and south, and has been traced from 12 miles north of the little town of Dullstroom to the Olifants River, a distance of roughly 60 miles. This reef, known as the Merensky Reef, is uniform in character, both as regards widths and values. In the same area, small koppies or hillocks are found, composed of an igneous rock known as hortonolite-dunite, three of which have been proved to be very rich in platinum.

In the middle of 1925, the platinum-bearing rocks were located near the town of Potgietersrust in the Transvaal; here several reefs have been proved. The reefs in this area, while of greater width and higher value than the Merensky Reef at Lydenburg, are not so consistent, but are likely to yield much platinum.

Perhaps the most important source of platinum in the volcanic rocks of the Bushveld Complex will be found in the Rustenburg area of the Transvaal. Here the norite reef has been found to extend continuously from 30 miles east of Rustenburg, passing that town and on north to the Crocodile River, a distance of roughly 100 miles. The reef is very consistent, and averages 5 pennyweights of platinum over a width of 4 feet.

While at present only pilot reduction plants are at work, it is not anticipated that the extraction of the platinum will yield any insuperable difficulties.

16. **Silver.**—The winning of silver has been chiefly confined to that contained in the gold bullion, of which it forms about 10 per cent. by weight. A considerable quantity was also extracted at the lead mines near Argent in the Transvaal, the galena of these mines carrying up to 80 ounces of silver to the ton; at the present time these mines are not working.

17. **Thorium.**—Monazite occurs in many places in more than samples around the margin of the Transvaal Bushveld Complex, as do various other rare minerals; but no attention has so far been paid to these, though the monazite is reported to have very distinct radio-active qualities. The mineral is also found along with cassiterite in the alluvial workings of Swaziland.

18. **Titanium.**—Hand samples of almost pure rutile have been obtained from the Barberton district, but as yet no information is public as to its method of occurrence. The titaniferous iron ores of the Transvaal already mentioned contain up to 14 per cent. titanium, and occur in enormous quantities.

19. **Tungsten.**—Specimens of wolframite have been obtained from various localities in the Transvaal, and from the Kuils River tin mine, but no quantity has been discovered. Scheelite occurs in considerable quantities in the Stavoren Tin Mines, and about 50 tons were recovered during the war period. The scheelite occurs quite irregularly mixed with tin and the associated minerals in pipe-like deposits. It may be the predominant mineral or may be entirely absent. It is not likely that any large quantities of this mineral will be obtained, but it is probable that a small output will always accompany that of tin.

A small quantity has been won in the neighbourhood of Leydsdorp.

20. **Vanadium.**—This mineral has been found associated with the lead ores of the Marico district in quite considerable quantities. So far, it is impossible to say much about the prospects of sucessful mining, but it appears certain that there are at least several hundred tons of vanadinite in the old dumps and visible in the surface workings which can be extracted at a good profit. In April and May, 1923, there was a production of 54 tons of concentrates, containing about 7 per cent. of vanadium.

21. **Zinc.**—Zinc, like lead, occurs in irregular deposits throughout the dolomite area of the Transvaal, but, with the exception of one property, no attention has been paid to its occurrence. At Witkop, in the Marico district, a zinc mine was opened.

22. **Radio-Active Minerals.**—So far, pitch blend has not been found in the Union, and, with the particl exception of monazite, no commercial attention has been paid to the rarer radio-active minerals which are found in the neighbourhood of the Swaziland and Transvaal tin fields, and which were described by Dr. A. W. Rogers in a paper read before the Geological Society of South Africa in April, 1915.

23. **Graphite, Corundum, Mica.**—All these exist in the Transvaal and Cape Province and have been worked during the past few years. The output, however, is small and no large export trade has been developed. With improved transport facilities and cheaper working costs it is probable that a considerable industry in these minerals will eventually be created.

§ 7. Diamonds.

1. **Discovery of Diamonds.**—The history of the early diamond discoveries in South Africa was given in some detail in the fourth and previous issues of this *Year Book*, in the course of an article by Messrs. G. E. B. Frood, M.A., M.I.M.M., and T. G. Trevor, A.R.S.M., F.G.S., of which this section is a summary.

The diamondiferous occurrences now known are spread over a large area, but have an apparent tendency to cluster, the chief centres being Barkly West and Kimberley in the Cape Province, Boshof, Koffiefontein, Jagersfontein, Kroonstad, and Theunissen in the Orange Free State, and the Premier Mine in the Transvaal.

Altogether, considerably over 250 occurrences* of Kimberlite (by which general term the rock of the diamond mines is now commonly known) have been located in South Africa, including Rhodesia, South-West Africa, and the Belgian Congo, all of which, however, are confined to the South African plateau, no payable mine having been discovered north of the Premier Mine.

Much the most important development since the original opening up of the mines of the Kimberley group has been the discovery, already alluded to, of the great Premier Mine, which lies about twenty miles east-north-east of Pretoria. The pipe is roughly an oval, 2,900 feet long by 1,500 feet across, giving an area of nearly 80 acres, or 3,570 claims. The enormous surface extension thus represented, as compared with other pipes, will be realized from the consideration that it amounts to only a hundred claims less than that of the three largest mines of the Kimberley group together. Down to the present depth of the working, the walls are practically perpendicular, and have shown no disposition to cave. This mine is at present working a day and a night shift of 48 hours per week each. The number of employees is 410 whites and 3,200 natives. The number of loads washed averages about 11,100 per day and the weight of diamonds recovered per load washed averages one-fifth of a carat.

The mine is so large that at the present rate of working the average depth only increases 8¾ feet a year, and, as the average depth is now only 305 feet, and the walls are massive, it is clear that the present method of working may continue for many years to come.§

2. **Production of Diamonds.**—(i) *Union.*—The table given below gives the annual output and value of diamonds in each Province, from the earliest date for which records are available.

According to official records, the value of the diamond output during this period was £236,238,832. The production of diamonds since the date of discovery, 1870, may, however safely be taken to have amounted in value to over £259,000,000.

3. **Geology (Diamonds).**—Kimberlite occurrences, though their distribution is apparently limited geographically, are not confined to any geological horizon, but pierce the rocks of various series. They are found as (1) pipes or necks, (2) dykes or fissures, and (3) blows or enlargements of dykes. In shape they are as a rule quite irregular, but with a tendency to the round or oval in case of the larger pipes. The section at depth also changes considerably, according mainly to the hardness of the successive strata of the enclosing rock, and in some cases there is found to be considerable deflection from the vertical. Comparatively with the areas found at the present surface, there is a general tendency to shrinkage at depth, but there are notable exceptions provided in some of the smaller occurrences. The enormous variation in surface extension is shown in the following table, giving the area in claims of 30 by 30 Cape feet of some of the principal mines.

AREA IN CLAIMS OF PRINCIPAL UNION DIAMOND MINES, 1918.

Mine.	Claims.	Mine.	Claims.
Premier	3,570	Jagersfontein	1,128
Dutoitspan	1,441	Bultfontein	1,067
Koffiefontein	1,428	Crown Diamonds	271
Wesselton	1,162	West End	147

A fuller account of the geology of diamond formations was given in previous issues of this *Year Book* (Nos. 1 to 5), which also contained particulars of the methods of mining and treatment of diamonds.

4. **Economics of Diamond Production.**—As the diamond is almost entirely an article of luxury, and as the mines of South Africa are capable of meeting much more than the demands of the world's markets, it has been found essential to have, instead of internecine competition, an equitable arrangement whereby the mines agree to a joint production sufficient to meet these demands. Periodical agreements have accordingly been entered into between the London Diamond Syndicate and the four chief producers in South Africa, viz. De Beers, South-West Africa, Premier, and Jagersfontein, whereby the syndicate undertakes to buy from them at agreed-upon prices diamonds to a certain total value, which are supplied by each of the four producers in agreed-upon proportions. Of the sales during 1924, amounting to £6,752,499 for the Union and £1,260,500 for South-West Africa, making a total of *£8,012,999, there were sold under these agreements diamonds to the value of *£8,981,000.

* The difference is accounted for by the fact that the Syndicate had a surplus of stones upon which to draw.

South Africa is, however, no longer in the happy position it was some years ago of having practically a world monopoly of the supply of diamonds, as the production of other parts of the world has risen until it is now approaching one-quarter of the total, the principal contributors being :—

	£
Angola	500,000
Belgian Congo	1,500,000
British Guiana	1,350,000
West Africa	250,000
TOTAL	£3,600,000

5. **Prices of Diamonds.**—For the three last full years previous to the war, viz. 1911, 1912, and 1913, the average prices obtained for mine stones, as produced in the Union, were respectively 32s. 9d., 36s. 2d., and 40s. 4d. per metric carat of 200 milligrams. Although the times were not normal, with the establishment of the control referred to above greatly enhanced values were obtained up to the latter end of 1920, the Union average price for mine stones in that year being 103s. 4d. At the end of 1920, however, there was a complete collapse of the diamond market owing to the world wide financial depression, in which the diamond trade suffered in common with other luxury trades, and as a result of persons in necessitous circumstances in Europe placing on the market diamonds they had acquired in more prosperous days. Prices dropped for the next two years, and only in 1923 was there a recovery to an average of 48s. 5d. per metric carat for mine stones in the Union, rising to 54s. 8d. in 1924. The average prices given are lowered considerably by the inclusion of the Transvaal production, which is of comparatively poor quality. Thus, for the year 1920, Cape stones realized 127s. 5d., Orange Free State stones 116s. 8d., and Transvaal stones 59s. 6d. The difference in the price obtained by the respective areas is not so marked, however, as the market gets lower, the average prices realized in 1923 being—Cape, 56s. 4d.; Orange Free State, 51s. 9d.; and Transvaal, 31s. 9d.; and in 1924—66s. 10d.; 63s. 10d.; and 30s. 2d. respectively.

In the case of alluvial stones, which on the average are much more valuable than mine stones of equal weight, prices generally follow the fluctuations of the market for mine stones. In 1913 the average price realized was 105s. 11d. per metric carat, which rose until 1919, when 254s. 9d. was obtained, and receded again with the general slump to 118s. 1d. in 1921, recovering again to an average of 135s. 8d. per metric carat for the year 1923, and to 149s. 7d. in 1924.

6. **Costs of Diamond Mining.**—Early in 1921, owing to the depression in the diamond market, the winning of diamonds by underground mining almost entirely ceased and up to the middle of the year 1924 it had not yet been resumed on a large scale. Consequently there were no working costs for this class of mining available to compare with the 4s. per load ruling before the war. On the other hand, the Premier working in the open on a scale only one-third of that before the war, was doing so at a cost of 3s. 1d. per load as compared with 2s. 6d.

7. **Labour in Diamond Mines.**—To the above results, the excellent management of labour on these mines largely contributes. The white employees are well paid and treated with much consideration, with the result that the mining population has become more settled and contented than is generally the case in large mining areas. The chief feature as regards the employment of natives and coloured persons is the establishment of a compound system, which entails confinement during limited periods of contract in closed compounds out of working hours. This system has been attended by the most satisfactory results, both from the employer's point of view in saving theft and securing the highest physical efficiency, and from that of the employee, in that having been well fed and cared for in the meantime, he is able to return to his home at the end of his engagement with all his earnings practically untouched. In consequence of the latter, aided a little perhaps by the attraction of the rewards paid for finding and delivering up stones, no mines are so popular with the native population, and most of the labour comes in practically free of cost to the companies.

8. **Alluvial Diamonds.**—Starting from Prieska, about eighty miles below the confluence of the Vaal with the Orange River in the Cape Colony, alluvial digging has gradually spread eastward and northward over a large area of the Western Transvaal. Along the Vaal river basin operations have been carried on extensively in the neighbourhood of Christiana, Bloemhof, Wolmaransstad, Klerksdorp, and latterly, between Parys and Vereeniging. From the Vaal, operations were extended up the banks of the smaller rivers, and digging on a large scale was carried out on farms up to and north of Schweizer Reneke.

Recently diamonds have been discovered in the Lichtenburg District between the towns of Lichtenburg and Ventersdorp and digging operations are in active progress there

The digging and prospecting already completed appears to indicate that a larger proportion of the huge area lying in the triangle between Prieska, Lichtenburg, and Vereeniging, carries alluvial gravel, in which patches occur where diamonds are concentrated and with considerable barren or poor intervals. Speaking generally, north of the Vaal River the diamond-bearing gravel lies near the surface and is of comparatively shallow depth. South of that river the gravel is generally found at some depth below the surface. Finally, passing by certain isolated occurrences such as that at Kameelfontein, near the Premier Mine, reference has to be made to a recent revival in interest in the gravels of the Orange River, from which some thousands of carats of diamonds were extracted in the year 1917. Of all these, the diggings of Griqualand West, on the lower Vaal, have all along been the great stand-by of the alluvial digger, in spite of the sometimes dazzling, if generally ephemeral, attractions of other fields. The value of the Griqualand West deposits is much enhanced by the fact that there is here, in addition to the usual surface gravel, a great development of the so-called deep gravels, which are really stiff conglomerates representing ancient river beds. These attain a considerable thickness in places, allow of safe mining by underground methods, and afford generally a more permanent basis for work. It is also here that the deposits contained within the present channel of the river appear most prolific, and admit of most profitable exploitation. In the last complete year before the War, viz., 1913, an average of 4,602 Europeans and 16,194 non-Europeans were employed on alluvial diggings throughout the Union, and were responsible for an output of 211,514 metric carats of diamonds, valued at £1,120,227. This output represented in value nearly 10 per cent. of the whole production of the Union.

The figures for 1924 show that 6,812 Europeans and 23,971 non-Europeans were engaged in alluvial operations. The diamonds found amounted to 287,555 metric carats, valued at £2,150,373, giving an average value per carat of 149s. 7d. The estimated value of alluvial stones in this year was 27 per cent. of the value of the whole diamond production of the Union.

Alluvial diamonds are, as a rule, much superior to the average of the stones recovered from the mines. In the year 1913 the average value of alluvial stones was 105s. 11d. per metric carat, as against 40s. 5d. for mine stones. In 1924 the average price of alluvial stones was 149s. 7d. per carat, as against 54s. 8d. for mine stones.

The problem of the derivation of the river or alluvial diamond is by no means fixed. The stones of every known mine are represented, as no doubt also are those of mines yet undiscovered, but there would in addition appear to be stones derived from other sources, amongst which is the amygdaloidal andesite of the Ventersdorp system.

All diamonds are now subject to export tax, but, apart from this, the only financial obligation required of the digger by Government is payment of his claim licence. In the Transvaal, claims measure 45 feet square, and are subject to a monthly tax of 5s. In the Cape Province the standard claim is 30 feet square, but this has been increased by proclamation to 30 feet by 60 feet as regards Griqualand West. The latter is subject to a licence costing 5s. monthly. In the Orange Free State £1 is charged on the full claim of 90 feet square.

9. **General.**—Koffiefontein having of recent years come under the control of De Beers Consolidated Company, and the small mines of the Boshof district being of comparatively little account, the great producing concerns may be considered as at present consisting only of De Beers Consolidated, the Premier, and Jagersfontein. These corporations have all been eminently successful financially, and in view of their enormous reserves of ground, have long lives in front of them.

The Government of the Union holds a six-tenths interest in the Premier Mine, in terms of the Transvaal *Precious Stones Ordinance*, No. 66 of 1903, but, apart from some small leasehold rents and payment of claim licences, De Beers and Jagersfontein are only subject to taxation in the form of the Profits Taxes applying to all mining concerns, and to the export tax of 10 per cent. required to be paid on all diamonds leaving the country.

Under the *Precious Stones Act*, 1904, of the Orange River Colony, the Government, under certain slight modifications, retains a four-tenths interest in all mines discovered after the promulgation of that Act. In the Cape Province, prospecting and mining are regulated by the *Precious Stones Act*, No. 11 of 1899, and the *Precious Stones Amendment Act*, No. 27 of 1907, of that Province, and in case of a mine being discovered on private land, one-half becomes the property of the Crown. In the Transvaal, under the ordinance referred to above, the Government takes the same interest in all future diamond mines as has been stated with regard to the Premier Mine. In all three Provinces prospecting is permitted in terms of the above Acts on liberal terms.

10. **Diamond Cutting.**—Two small diamond cutting and polishing factories were started in Johannesburg in 1909.

In 1917 there was imposed an export duty of 5 per cent. on rough diamonds, but it had no perceptible effect in encouraging the industry, and in 1919 there were still only two actories—one in Johannesburg and one in Pretoria. In 1919 the export tax was raised

to 10 per cent. and, in addition, an Act was passed making provision for the establishment, carrying on, regulation, and control of a diamond-cutting industry in the Union, and for ensuring a supply of rough or uncut diamonds to persons engaged therein. The local cutter thus secures the advantage of the 10 per cent. export duty plus the cost of selling rough stones in Europe, or altogether about 12½ per cent. of the value of the rough diamonds. Since the passing of the 1919 Act twelve licences have been granted to diamond-cutters, of which four are still in force and being exercised at two factories in Johannesburg, at one in Pretoria, and at one in Kimberley, which between them during 1924 employed twenty-two whites and purchased or otherwise obtained rough diamonds to the value of £26,589 and sold or otherwise disposed of polished diamonds to the value of £41,415.

§ 8. Gem Stones other than Diamonds.

1. **Garnets.**—Garnets of very good quality, and several varieties of spinel occur in the Zoutpansberg district of the Transvaal, but so far these have not been exploited.

2. **Verdite.**—A variety of serpentine which has obtained the local name of verdite, has been worked in the Barberton district of the Transvaal. This is an extremely beautiful stone of a green colour, suitable for all manner of small ornaments, clock-cases, etc., but too soft for architectural purposes.

3. **Crocidolite.**—In South Africa, this term has been commonly applied to the "chatoyant" hard variety of the mineral used in jewellery, and for ornamental purposes, and also known as "tiger's eye" and "cat's eye." The distribution of the valuable species is comparatively limited, little being found away from the farm of Naauwpoort in the Hay District of the Cape Province. Enough is available there, however, to supply the world's requirements for an indefinite time.

4. **Jade.***—The so-called South African "jade" is found in the Transvaal, between Pretoria and Rustenburg. It possesses all the qualities of a semi-precious stone, and has been found well suited for the manufacture of articles of stone jewellery. The commonest colour is green, not much different from that of true jade, but pink and other lighter shades are also found. The mineral occurs under conditions and in quantities which are encouraging.

§ 9. Coal.

1. **Coal.**—The discovery of coal in South Africa had very far-reaching effects upon the trade and prosperity of the country. There are no old records as to the extraction of this mineral, but it is probable that both natives and colonists won a little from the outcrop seams some years before any of the coal beds were put to commercial use. In 1878 Dunn and North reported upon the existence of workable coal in the Stormberg beds of Cape Colony, and at Indwe, Molteno, and other localities seams of second-rate coal have been mined for many years.

In the Transvaal coal was first opened up near Boksburg in 1887, and the finding of this mineral in close proximity to the Witwatersrand gold fields was of the greatest importance, as the high plateau in which the gold-bearing beds were discovered was practically destitute of timber, and there was no railway communication to the coast or to other coal fields. Following upon the discovery at Boksburg, large seams of good coal were opened up in the Middelburg district, and with good railway communication to Johannesburg, the Middelburg collieries now supply the bulk of the coal used by the mines and other industries.

Natal, speaking generally, produces the best coal in the Union, and does a large shipping trade. The seams, however, are smaller and deeper than those of the Transvaal; gas and dust exist in some pits, and working costs are higher than in the other Provinces. It is probable that the large bodies of anthracitic coal which exist in Natal will also be worked in the future, and that some of the poorer seams now discarded will be utilized for the extraction of by-products.

South Africa has made its name through the production of gold and diamonds, but it is mainly due to the existence of cheap coal that the large output of gold and diamonds has been made possible. On the Witwatersrand proper only a few mines would be working at the present time if a plentiful supply of cheap steam coal was not available.

2. **Production of Coal in Union.**—The following statement shows, in respect of the Union and each Province, the annual output of coal from the earliest date for which complete records are available and the value of the annual output:—

* From a memoir by Dr. A. L. Hall, published in the Transactions of the Geological Society of South Africa, Vol. XXVII, 1924.

ANNUAL OUTPUT OF COAL, VALUE, AND VALUE PER TON, FROM 1885.

Year.	Quantity.					Value.	Average Value per Ton.

* For year 1889 only. † Average for years 1893 and 1894. ‡ For year 1904 only.

3. **Geology and Occurrences.**—The coal fields of South Africa have not yet been geologically surveyed. It was formerly considered that all the coal measures belonged to the Stormberg Series, but recent investigation tends to the conclusion that there are two horizons, the one of Stormberg age, the other in the older Ecca Series.

A general comprehensive report on the coal resources of the Union is now being prepared by the Geological Survey. In the meantime Memoir No. 3 of the Geological Survey—"The Geology of the Transvaal Coal Measures," by E. T. Mellor—gives a detailed account of the Witbank fields.

(i) *Coal Resources of the Union.*—The following extract from "The Coal Resources of the World" (p. 415) adequately describes the existing knowledge of the Union coal fields :—

> The state of our knowledge regarding the various coal fields of South Africa is so meagre that anything like an accurate estimate of total quantity of coal available is quite impossible. The various coal-bearing areas have not been accurately mapped, and it is not known whether or not the coal in these presumably coal-bearing areas is of economic importance.
>
> The reason for this lack of knowledge is not far to seek. The exploitation of coal is of comparatively recent growth, not extending further back than one generation, and even at present the annual output of coal is only about 10,000,000 tons, an amount which is insignificant compared to the total resources of the country. Coal is, therefore, comparatively speaking, a drug in the market, and the competition is so keen amongst various producers, that the pit's mouth price, in the Transvaal, of about 5s. per ton, is as low as it is anywhere in the world.

(ii) *Cape of Good Hope.*—The workable occurrences are confined to the Molteno beds of the Stormberg Series and are found at three well-defined horizons, known as the Indwe, Guba, and Molteno seams. Practically the whole output, however, has been obtained hitherto from the first and third of these. Generally, the coal occurs in comparatively small layers, much interlaminated with shale, with the consequence that a great deal of sorting has been necessary, and working expenses have been high. It has at the same time a high ash and low volatile content, resulting in a low calorific value, placing it out of competition, except for purely local purposes, with the higher grade coals that are now available. Such as they are, these coals have played a useful part in the development of the country and have been used in the past to great advantage, especially by the De Beers Company and the railways. Gradually, however, they have been forced out of the market and there are now only two or three small companies continuing operations.

(iii) *Natal.*—The collieries are situated in the districts of Klip River, Newcastle, Utrecht, and Vryheid. Altogether there are 31 producing collieries in Natal, and the number is steadily being added to.

The area of the coal field from which coal is now being raised is roughly 2,000 square miles, although probably only 50 per cent. of this area is coal-bearing. Until much additional boring has been done it is impossible to estimate with any attempt at accuracy the area and coal contents of this field. Taking Hatting Spruit as the centre of this coal field, the distance by rail to Durban, to which the bulk of the output goes, is 240 miles.

A colliery was started and worked at Somkele, in Zululand, some 20 miles from the coast, but the coal was too anthracitic and dirty to enable the colliery to continue working with success. Much coal exists in Zululand, but owing to the distance from railways, and the

uncivilized state of the country in the known coal fields of Zululand, very little prospecting has taken place. The Zululand coal field is therefore an unknown quantity, which may however, become of the utmost importance as that country develops and additional railways are constructed therein.

The Natal coal is of excellent quality. The following are analyses of typical Natal coals :—

ANALYSES OF NATAL COALS.*

Name of Colliery.	Moisture.	Volatile Matter.	Fixed Carbon.	Ash.	Calorific Value as per Mahler Bomb Process.	Sulphur.

* Report of Coal Commission, 1921.

One colliery (Dewar's Anthracite) supplies nothing but anthracite, which is found very suitable for suction gas-engines, etc.

(iv) *Transvaal.*—Coal in the Transvaal is known in four geographical districts :—

(*a*) *The High Veld.*—This is in the section made by the Natal–Johannesburg railway in the west, by the Delagoa Bay–Johannesburg railway in the north, and a line drawn south from the Belfast to the Natal boundary at Paulpietersburg on the east. This is the only area on which coal is at present mined, with the exception of the small area at Vereeniging on the south side of the Orange Free State boundary where the measures detached from the Main High Veld area nevertheless belong to it. This area is probably not less than 9,000 square miles in extent.

(*b*) *The Bushveld Area.*—This is an area beginning some thirty miles north of Pretoria. Coal measures, which have in various places been proved to overlie coal, occur over an oval-shaped area some seventy by twenty miles in diameter. Coal seams of considerable thickness have been struck in boreholes and in one shaft. The coal where struck appears of an inferior quality, but would be a useful fuel if a calorific value of ten were accepted. This area is about 750 square miles in extent.

(*c*) *The Lebombo Area.*—This contains a strip of coal measures which outcrops over a width of some six miles along the whole eastern boundary of the Transvaal and Swaziland, some twenty miles west of, and parallel to, the Portuguese border. This coal has not yet been worked, but where opened it appears of good average South African quality, but anthracitic in character, and much disturbed by the neighbouring igneous mass of the Lebombo Hills.

(*d*) *The Limpopo Area.*—Coal measures occur over a very considerable area in the northern Transvaal, stretching from the Lebombo westwards along the Limpopo Valley. The coal in these measures is only opened in one place, Liliput, where the Messina Copper Company worked a small pit for fuel for their smelter. The seam worked is 3 feet wide and is rather inferior, the selected coal having probably a calorific value of not more than 10·5. Neither the Lebombo nor the Limpopo areas are sufficiently well known to attempt an estimate of their size, but 2,000 square miles would probably be a conservative estimate.

(*e*) *The North Waterberg Area.*—This is an extension of the Limpopo area. In the country lying between the Matlabas River on the west and the Palala on the east, coal has recently been struck in boreholes which were being sunk in connection with a search for water. A core drill was sunk in 1921 to prove these measures on the farm Grootgeluk No. 1360. From the surface down to 140 feet eight coal seams were encountered. Of these the following were of workable dimensions :—

Seam.	Depth.	Thickness.
B.	45 feet.	5 feet 6 inches.
C.	57 feet.	7 feet 0 inches.
D.	75 feet.	10 feet 1 inch.
F.	134 feet.	6 feet 8 inches.

From 134 feet to 302 feet no definite coal seam was encountered, but at that depth seam " G " of 22 feet was proved and at 136 feet seam " H " of 13 feet. The borehole was continued to 500 feet, but no further coal was found.

The analyses of these coals, which are in the possession of the Mines Department, show that the lower seams are of the ordinary South African quality and quite up to the usual standard. The upper seams, however, are extremely bituminous and of a very much better coking quality than any yet encountered in the country.

The area underlain by coal in the Transvaal appears to be about 60 miles from east to west, and 30 miles from north to south, but stretches an unknown distance into Bechuanaland in the neighbourhood of Palla Road Station on the Rhodesian railway.

The following analyses may be taken as representative of Transvaal coals :—

ANALYSES OF TRANSVAAL COALS.*

Name of Colliery.	Moisture.	Volatile Matter.	Fixed Carbon.	Ash.	Calorific Value as per Mahler Bomb Process.	Sulphur.
Apex	5·28	17·27	50·09	27·36	9·03	1·14
Bellevue	3·75	31·47	52·46	12·32	12·34	1·50
Breyten	2·75	30·42	50·87	15·96	12·03	1·00
Largo	4·50	24·50	52·00	17·50	10·50	1·50

Transvaal and Delagoa Bay	1·38	22·38	59·40	15·58	12·56	1·26
Witbank	0·94	27·04	56·96	13·82	13·01	1·24

* Report of Coal Commission, 1921.

(v) *Orange Free State.*—The chief producers are the Cornelia Colliery on the Vaal River opposite Vereeniging, and the Clydesdale, about fifteen miles to the south, but there are also two small pits working at Vierfontein, about eighty miles to the south-west, on the Klerksdorp–Kroonstad railway line. The Orange Free State field is of great extent, but no serious attempt appears to have yet been made to delimit the probable area. So far, also, not more than one workable seam has been discovered at any point. The average width of the coal worked is much the same in the different collieries and may be taken at about 7 feet 6 inches. The coal is only of second grade quality, the average evaporative efficiency of the present output (1 lb. of water per lb. of coal as ascertained by Mahler bomb) being about 10·65. At the same time, it is otherwise a useful steam coal, whilst for household purposes it is generally preferred to any other.

4. **Methods of Mining.**—The methods of mining followed in the Natal, Transvaal, and Orange Free State coal mines were briefly described in previous issues of this *Year Book* (Nos. 1 to 4).

5. **Coke, By-Products, Tar, Etc.**—(i) *Coke.*—The manufacture of coke is at present confined to the Province of Natal, which supplies all the coke used in South Africa, and also exports a considerable quantity.

In 1924 the output of coke was 74,101 tons, valued at £90,537.

Natal coke is of excellent quality especially for foundry work, being very dense and hard. Analyses of a typical Natal coke taken over a period of two years gave the following results : Fixed carbon from 88·60 per cent. to 89·40 per cent ; ash from 10·4 per cent. to 9·80 per cent. ; sulphur, 0·60 per cent. to 0·50 per cent. ; calorific power, 13·12 per cent.

(ii) *By-Products.*—The Dundee Coal Company is producing the following by-products at its Waschbank Factory, Natal : tar, sulphate of ammonia, light creosote oil, naphtha salts, and solvent naphtha.

The South African Carbide and By-Products Co., Ltd., is producing calcium carbide at the Ballengeich Colliery, Natal. The Natal Ammonium Company, near Vryheid, which was the first colliery to produce by-products, has a large plant for the production of sulphate of ammonium.

(iii) *Tar.*—During 1924 the Dundee Coal Company in Natal sold 186,171 gallons for £9,180.

6. **Employment and Accidents in Coal Mining.**—The number of persons employed in coal mining in each of the Provinces during the year 1924 is shown below. The table also shows the number of persons killed and injured, with proportion killed per thousand employed :—

EMPLOYEES AND ACCIDENTS—COAL MINES, 1924.

Province.	Persons Employed in Coal Mining.		Accidents.		Death-Rate from Accidents per 1,000 Employed.
	European.	Other.	Persons Killed.	Persons Injured.	
Cape of Good Hope....	8	79	—	—	—
Natal.....	818	18,301	53	282	2·77
Transvaal.....	780	14,312	24	93	1·59
Orange Free State.....	130	2,413	8	22	3·15
UNION.....	1,736	35,105	85	397	2·31

7. **Labour in Union Collieries.**—In the collieries, the white miner is in the position of a supervisor, having usually from 50 to 100 natives employed under him. He does little manual work, beyond conducting blasting operations and examining the places before the natives enter and start work.

Natives (the aboriginal inhabitants of South Africa) do all the harder work, such as hewing the coal, filling, and tramming. In Natal, Indians are largely employed, and are efficient in supervising stationary engines, running coal-cutters, erecting timber underground, pipe and track laying, etc.

8. **Wages (Coal Mines).**—White miners' wages vary from 20s. 6d. to 24s. a day. The hours of labour were reduced progressively to 54 and then to 51 per week as from 1st July, 1920. In the Witbank district the hours were reduced to 48 per week. Natives draw from 40s. to 60s. a month, with free quarters, rations, and medical attendance. Indians' wages are the same as natives, but the Indian, as a rule, remains longer at the collieries, and gets more proficient. He, therefore, in some cases receives a higher remuneration.

The following statement shows the wages earned on the collieries in 1924 :—

WAGES PAID IN COLLIERIES OF UNION, 1924.

Province.	European.	Asiatic.		Native and Other.	
		Males.	Females.	Males.	Females.
	£	£	£	£	£
Cape of Good Hope.....	713	—	—	2,065	82
Natal.....	327,137	65,538	17	434,860	57
Transvaal.....	314,328	289	—	407,106	137
Orange Free State.....	48,038	—	—	69,177	—
UNION.....£	690,216	65,827	17	913,208	276

9. Capital (Coal Mines).—The subjoined statement shows the capital invested in collieries in the Union and the dividends arising therefrom in 1924 :—

COAL MINES—CAPITAL, 1924.

* Includes a company whose capital is largely employed in business other than coal mining.
† Includes a company whose capital is largely invested in estate property.

10. International Comparison of Production.—Compared with the enormous coal production of such countries as the United States of America, the United Kingdom, and Germany, the coal output of the Union is small. The following table gives the production in tons of 2,000 lb. of some of the chief coal-producing countries of the world, during a series of years :—

OUTPUT OF COAL IN VARIOUS COUNTRIES, 1915 TO 1924.

YEAR.	United Kingdom.	India.	Canada.	Australia.	U.S.A.	Germany.	France.	Belgium.	Japan.	UNION.

§ Including the Ruhr.

11. Union Coal Trade and Coal Consumption.—Being such a long distance from any of the important coal fields of the world, the South African coal deposits are of the utmost value, not only to the Union but to Africa generally, and to the large numbers of ships which now call and coal at Union ports. South Africa is anything but a well-wooded country, and if no coal had been available in the Union itself, it is improbable that the gold and diamond mines, which have so largely contributed to the development of the country, could have been successfully carried on. New industries are being started in the Union, all of which will benefit largely by cheap fuel, and as water power is not available, the country would be unlikely to secure industrial prosperity were it not that it has an ample supply of the cheapest coal in the world.

The chief present consumers of coal are the mines, the Government railways, and the ships which coal at Union ports.

There is every reason to anticipate a bright future for the coal industry. The Union is only in an early stage of development. With the increase of railway communication, and the opening up of the numerous industries for which South Africa has the means and facilities, a large demand for coal must follow. As the Union develops, the amount of shipping coming to the country will increase, and such shipping will coal at Union ports. The export of coal from the Union increased during the War, and such countries as the Argentine Republic, Mauritius, and Madagascar are likely to require steadily increasing quantities of Union coal.

It is as yet too early to estimate the ultimate dimensions of the coal by-product industry. It is unlikely that such countries as the South American Republics, Madagascar, and Mauritius will go to Europe and the United States of America for coal by-products if they can obtain them at less cost in South Africa.

For many years to come South Africa should be able to supply coal at a cheap rate; while wages are likely to increase in older countries, the native of South Africa will probably remain content to work for far less than a European. This fact, taken together with the favourable geographical situation of the Union, enables the country to compete on advantageous terms with the other coal-producing countries of the world.

The following table shows the quantity of coal imported into, exported from, and consumed in the Union during a period of years :—

COAL—UNION IMPORTS, EXPORTS, AND CONSUMPTION, 1911 TO 1924.

Year.	Consumption of Coal.			Coal Imported.	Coal Exported.	Coal Bunkered.†
	Total.	Railway.*	Mines.

* Steam coal only. † Shipped in vessels cleared overseas only.

12. **Price of Coal.**—The price of coal varies very much in the different Provinces. The reason for this difference in prices is largely due to the situation of the collieries. Thus, the Cape Province coal, which is the most inferior in the Union, fetches the highest price, because coal from the other Provinces has to be transported by rail to the Cape Province, thus enabling the local coal to maintain its high price.

Natal coal is the best in the Union, and the up-to-date Port of Durban being now a large coaling station, the considerable bunker and export trade done at this port, and the high quality of the coal supplied, enables the Natal collieries to command comparatively high prices for their output.

There has been no great fluctuation in prices in recent years, except in Natal. The Transvaal and Orange Free State coal is mostly consumed in those Provinces, and as the demand is no greater than the supply, there has been little opportunity for prices to increase. In Natal it is different. Much coal is consumed by passing ships, willing to pay good prices for it, and this, coupled with the rise in the price of coal in the United Kingdom, has tended to raise the price of coal in Natal. From the following table it will be seen that while the price at the pit's mouth has remained almost stationary in the Transvaal, Cape, and Orange Free State Provinces, there has been a rise in the price of Natal coal up to 1921, but a setback in subsequent years.

AVERAGE PRICES OF COAL (PIT'S MOUTH), UNION, 1911 TO 1924.

* 2,000 lb.

13. **International Comparison of Prices.**—Apart from the price of Cape coal, which is relatively high on account of the scarcity of coal in that Province, the price of coal in the Union compares very favourably with the prices in other parts of the world.

The average pit's mouth price in the United Kingdom in 1922 was approximately 19s. 2d.

The following table provides a comparison of the retail prices of coal in the Union and various other countries :—

14. **Coal Commission and Coal Act.**—The Coal Commission was appointed in 1920 to report upon the measures required for :—

(*a*) The effective grading and pooling of South African coal intended for export and for bunkering.
(*b*) The equitable distribution of the cost amongst the participating collieries ; and
(*c*) The discouragement of the export of low grade coal.

The Commission was also required to report upon the necessity of safeguarding the supply of coal for local consumption, and for the use of Railways and Harbours and other public services.

The Report was issued in May, 1921, and was summarized in *Official Year Book* No. 4.

The *Coal Act*, No. 27 of 1922, which came into effect on the 1st September, 1922, followed the lines of the Coal Commission's report. Its main provisions may be thus summarized :—

(i) No coal produced within the Union is to be used for export or bunkering unless it has been graded and a certificate in the prescribed form has been granted in respect thereof.
(ii) A committee to control the grading of coal may be appointed, consisting of a chairman, nominated by the Minister, and four members, either all nominated by the collieries or two nominated by the collieries and two by the Minister. Members and officers of the grading committee may enter any colliery or place where there is coal at any time. Reasonable assistance in the work of grading and inspecting must be given by the officers and servants of the colliery or place concerned with the bunkering and export of coal.
(iii) A monetary levy is to be made on the collieries by the grading committee at the commencement of its operations, this levy to be based upon the tonnage shipped by the several collieries during the preceding six months. Every quarter afterwards the amount levied is fixed in proportion to the amount of coal supplied during the preceding quarter by each of them for export and bunkering.
(iv) Export and bunkering of coal may be restricted or prohibited by the Minister if there is any real or apprehended scarcity.

Provision is also made for the requisition of coal by the South African Railways and Harbours Administration in times of scarcity of available coal, and for the issuing of regulations. Penalties for the contravention of the Act are laid down.

15. **Grading of Coal.**—*Coal Grading Committees* for Natal and the Transvaal, each consisting of a chairman and four members, were appointed by the Minister. These Committees started work towards the close of 1922 and drafted regulations which were published in the *Government Gazette* of the 5th December, 1922, under Government Notice No. 1965. The collieries wishing to export coal in these two Provinces of the Union were sampled and the calorific value of the product was in each case decided. Standards were next fixed, the following being adopted :—

NATAL.—First grade.—13·5 with a permitted variation of 2 per cent., thus making the lowest first grade to pass a standard of 13·25 calorific value.
All below this was graded second class.
If the ash of any coal fused below 1300° C, a note to this effect was inserted in the grading certificate.

TRANSVAAL.—Witbank A.—12·75 or above.
„ B.—Below 12·75 but 12·25 or over.
Ermelo A.—12·00 or above.
„ B.—Below 12·00 but 11·5 or over.

Experimental work in connection with fusibility of ash and absorption of oxygen is proceeding in the Transvaal.

§ 10. Non-Metallic Minerals, other than Coal.*

1. General.—The remarks in Section 6 as to the lack of interest taken until recent years in the occurrence of any other minerals but diamonds and gold, applies with even more force to the non-metallic minerals. Up to ten years ago, asbestos, common salt, and lime were practically the only non-metallic minerals the existence of which was noted. The present position, however, is improving, and is as follows :—

(i) *Asbestos.*†—Asbestiform crocidolite, commonly known as *blue asbestos*, has been worked in the Cape Province for over twenty years, having been first brought upon the market by the Cape Asbestos Company, which was formed for the purpose in 1893. For many years this company continued to be the only channel for production, and operations were largely confined to its mines in the Prieska and Hay Districts. More recently, a large number of independent producers have entered the field, and the fibre now reaches the market from various sources.

---

* By T. G. Trevor, A.R.S.M., F.G.S., Inspector of Mines, Pretoria.
† See Memoir No. 12, G.S., "Asbestos in the Union of South Africa," and also *Journal of Industries*, November, 1918.

Blue asbestos is found in the lower Griquatown beds, which, so far as regards the exposures of the parent rock, may be taken as identical with the range of hills known as the Asbestos Mountains, and the continuation north of these in the Kuruman-Honingvlei range. The mineral has been found from the border of the Bechuanaland Protectorate to thirty miles south of Prieska; and it is believed that its extension over this distance of more than 300 miles is practically continuous. The lateral range of the asbestos-bearing rocks varies from four to upwards of twenty miles. Only small portions of this enormous area are being exploited in the meantime; but with the further opening up of the country, and improvement in facilities, an indefinitely large expansion in the production must inevitably result.

The Cape Asbestos Company has two large mines developed on normal lines, and a few other companies are also starting to mine by underground methods. Generally, however, the recovery is effected by surface quarrying. The distribution of the asbestos, both as regards the number of seams found from point to point and the length of the fibre, has been found to be very irregular, but in the general case no serious cause has been found for apprehension that the recovery will cease to be payable when underground methods have to be resorted to.

Beyond rough cleaning and classification, no preparation of the fibre is yet attempted previous to shipment to the European markets. Over some portion of the asbestos area, a proportion of the material mined is found to be rusty or discoloured. The former is rejected altogether, but the latter, after the usual classification, is accepted on the market at a reduced price.

Owing to differences in classification and other circumstances it is scarcely possible to form a reliable estimate of the length of the fibre being produced, but it is believed that nearly 25 per cent. of the whole production is of the length of 1 in. or over. It is equally difficult to arrive at an estimate of the asbestos yielded per ton of rock mined, but the proportion certainly exceeds that of most of the other producing fields of the world.

The crocidolite variety of asbestos differs greatly from the white or chrysotile in respect of its relatively high iron and low magnesia and water content, and naturally essential differences in its commercial qualities are disclosed. The greater resistance offered by the white variety to very high temperature is unquestioned, as also is its greater softness, making its milling and reduction much easier than in the other case. On the other hand, the crocidolite, amongst other virtues peculiarly its own, is credited with higher efficiency as an insulating material, both as regards heat and electricity, and with being unaffected by ordinary acids, chemical solutions, and, in particular, by sea water. The fibre is also lighter, and is claimed to be at the same time stronger, finer, and more elastic. It is mainly upon how far these qualities that are claimed for blue asbestos approve themselves in the world's markets that the future of the industry in South Africa is dependent.

In the North Lydenburg District of the Transvaal, and stretching into the southern portion of the Pietersburg District, asbestos occurs over a large area in the form of interbedded veins in a highly ferruginous metamorphous shale in the lower Pretoria Series, which is considered to be geologically identical with the Griquatown formation of the Cape Province. The extension of the mineral is very considerable, as it has been found to occur over an outcrop length of about sixty miles. Difficulty was at first experienced in getting the market to accept this variety of asbestos, but it has now been taken up both in America and Europe.

The main mine at Penge has now been opened for some 2,500 yards along the outcrop and 400 ft. in depth. The average section of asbestos in this area is certainly 9 in., and the quality appears to improve with depth. Nearly 40 miles away on the same line, a similar section has been exposed, and there seems every reason to believe that these fields will rank with the best in the quantity of available mineral. The quality of this asbestos is, however, different from any in the market. A very large proportion is over 4 in. in length, and this has so far proved an objection, as factory machines are arranged to take short fibre. In the course of time suitable machinery will doubtless be erected, but at present the fibre at Penge is actually being cut into short lengths to suit the market. The composition of this asbestos is different from the ordinary crocidolite variety, being higher in iron; and it is proposed to describe it as *amosite asbestos*. In texture the mineral, though fine, and easily fiberized, is harsher to the touch than the Cape variety, but the fibres are quite as strong and to a certain extent elastic. As this fibre can be put on the market at a very much lower price than any similar material, and occurs in extremely great quantities, it is certain that it will in the future create its own market. In the meantime the market is restricted, though a local use for the waste qualities is being found in the manufacture of asbestos tiles at a factory at Cape Town.

The chrysotile deposits of the Carolina District have been known in the market for many years. The mineral is there found in veins in a bed of noble serpentine, over a length of outcrop of some twenty miles. The fibre is of excellent quality, and commands a very high price, but working conditions have not hitherto proved favourable, and production has been small and spasmodic.

The value of the asbestos produced in the Union in 1924 was £110,075.

During the years 1922 and 1923 a group of chrysotile asbestos mines was developed at Kaapsche Hoop in the Barberton District, and during 1923 some 200 tons of very high-grade fibre were exported per month. The leading mine is developed to a depth of some 400 feet, both by incline and shafts and drives, which show a unique section both in quantity of asbestos and quality of the fibre. The mining of this is already highly payable, and it appears certain that the output will increase very considerably.

For a description of these deposits see Memoir No. 12, Geological Survey, "Asbestos in the Union of South Africa," and also the *Journal of Industries* for November, 1918, and Proceedings of the Geological Society of South Africa, 1921, page 168, on the "Asbestos Occurrences near Kaapsche Hoop in the Barberton District," A. L. Hall, and 1923, page 31, "Further Notes on the Asbestos Occurrences near Kaapsche Hoop in the Barberton District."

Asbestos of the several varieties also occurs in Natal and Zululand. These deposits are now attracting attention, but no reliable details as to their possibilities are available.

The following statement gives particulars regarding the sales and shipments of asbestos from the Union during the years 1919 to 1924 :—

SALES AND SHIPMENTS OF ASBESTOS FROM UNION, 1919 TO 1924.

* 2,000 lb.

(ii) *Corundum.*—The existence of corundum in the gneiss and schists of the Zoutpansberg and Barberton areas has been known for some years, but was not regarded as of commercial importance till the demand for abrasives created by the European war brought it into prominence. For the past ten years there has been a continuous but spasmodic production from the Bandolierkop District. The corundum occurs in the form of broken crystals in the surface detritus derived from certain belts in the gneiss. The origin of these crystals lies in plumasite veins below, the decomposition of which has set free the corundum crystals. The crystals are won by screening and washing the gravel in rotary pans. The gravel is commonly up to two feet in thickness, and may contain 5 to 10 per cent. corundum. The area covered by these deposits is unknown, but over 150 separate occurrences have already been worked. There is now an excellent demand both in America and in Europe for these crystals, but the market has been spoilt again and again by consignments being forwarded which are not up to sample. Gradually, however, the producers are learning their lesson, and a steady export is being obtained.

During 1921 a five-stamp battery and dressing plant were erected by the Zoutpansberg Grain Corundum Company, at Bandolierkop, to crush the corundum rock underlying the the above eluvial deposits. This plant produces about three tons a day of crushed and graded corundum for which a ready market can be obtained if only the grading is correct. Unfortunately, however, owing to lack of knowledge and insufficient capital, this Company has met with very great difficulties, many of its consignments being rejected owing to incorrect grading. Proper steps are now being taken to overcome these difficulties, and the future of the industry appears to be secured.

There is also a similar occurrence of corundum in the sillimanite gneiss at Steinkopf, in Namaqualand, but attempts to exploit this have not been attended by success.

The deposits and the industry are scientifically described in Memoir No. 15 of the Geological Survey of South Africa (see also *Journal of Industries*, May, 1918).

(iii) *Flint.*—Flint in the nodular form does not occur in South Africa, but as chert it makes very well-defined bands up to two feet and more in thickness in the dolomites. It has been worked for liners for tube-mills, but the introduction of steel and composite liners has checked the growth of this industry.

(iv) *Fluorspar.*—Fluorspar, calcium fluoride, is an important non-metallic mineral which is found to occur in workable deposits in the dolomite formation near Ottoshoop, Zeerust District. The deposits at present being worked are roughly circular in shape,

varying from 70 feet to 150 feet across, extending from surface downwards to a depth not yet determined. The deepest workings are at present about 60 feet. Each deposit consists of extremely high-grade mineral, averaging approximately 99·5 per cent. fluorspar with a maximum of 0·3 per cent. silica. The greater proportion is colourless, but purple, greenish, yellow, and brown samples are found.

Fluorspar is used in the smelting of iron, steel, and aluminium, and in the manufacture of enamelled ware, glazed tile and brick, opalescent glass, certain chemical products, and, to a small extent, for optical lenses. The local product is particularly suited to the manufacture of hydrofluoric acid on account of its unusual purity. This acid is extensively used by the aluminium industry in the preparation of fluorides necessary for the reduction of aluminium.

The mineral has been worked for some years on a small scale for local purposes, the market for which is limited. Latterly an export trade has been opened up, and this shows signs of a large increase, the extraordinary purity of the ore having excited keen interest amongst foreign manufacturers. The deposits are so consistently pure and unencumbered throughout their extent with any foreign substance that no preparation is necessary before the product is marketed.

(v) *Graphite.**—Impure graphite is of fairly common occurrence, both in the older sedimentary rocks and in the gneissic rocks, but so far it is only worked in one place—in the Zoutpansberg District. This little mine turns out about six tons per month. It is worked up by the owners into material for furnace linings and forge facings. The mineral occurs in a lens in gneiss; so far as opened, the deposit is over 200 feet long by 30 feet wide, and is mostly a fairly pure carbon. Certain veins in it give a very pure flake graphite, but not in large quantities.

(vi) *Gypsum.*—The cement factories of the Union have a constant need of gypsum and a good deal of work has been done searching for the mineral. Up to the present the only deposits found have been irregular segregations in the soil of some valleys and pans in the more arid districts of Natal and the Orange Free State.

The chief deposit hitherto discovered in the Orange Free State is on, and in the neighbourhood of, the farm Vrede (part of Fouries Rust), about 16 miles south-east of the town of Boshof, and is now held by the Gypsum Supply and Products Company, Ltd., recently constituted. It has only been opened up at one or two points, but is said to have been proved over an area exceeding 400 acres. A thickness of from 18 to 20 feet has been found at one point, but this represents the maximum and the average is not likely to exceed 5 or 6 feet at most. The material, which is obviously the result of deposition from surface waters, is much immixed with earth, but the portion retained on a 1-ft. square sieve, after being broken down and roughly cleaned, is over 90 per cent. pure. This mineral is also found along the Bloemfontein–Kimberley line, in the neighbourhood of Boschvark siding, and at a number of other places in the Orange Free State, but the deposits have in no case been opened up to any extent and very little is yet known of them. A few hundred tons have been turned out as a by-product in the process of salt-making and this represents a probable source of future supply.

(vii) *Kieselguhr.*—Kieselguhr occurs in the Amsterdam District of the eastern Transvaal, also near Krugersdorp, and in Griqualand West and Gordonia. It occurs as a deposit in the beds of certain small fresh-water marshes, and its occurrence may be very much wider, for it is not a material which attracts attention either by its appearance or its mode of occurrence. It has so far only been worked to a small extent, mainly for use in boiler-lining materials.

(viii) *Kaolin and Clays.*—Kaolin occurs as a decomposition product of the granite over very large areas, but has not yet been worked, except on a very small scale on the Cape Flats, where, however, its occurrence is not directly associated with granite, and in Natal.

(ix) *Fireclays.*—Fireclays are associated with all the coal measures of the country, and many are of excellent quality. These do not usually occur directly underlying coal, but are often separated from it by a hundred feet or more. Firebricks and crucibles of excellent quality are being manufactured from such clays near Boksburg.

A good firebrick is also made from the matrix of the glacial tillite underlying the coal seams at Vereeniging.

(x) *Pottery Clay.*—Most of the coal measure clays are suitable for pottery work. A deposit of these was worked at Olifantsfontein, between Pretoria and Johannesburg, and very excellent articles of domestic potteryware were produced. A difficulty was experienced in producing a white china, but it is believed that that could have been overcome by scientific methods. Owing, however, to the cheap price, and great variety, of imported pottery, these works have been closed down for some years.

(xi) *Common Clay.*—Good common clay for brickmaking is almost universal throughout the Union, and near the large centres beds of shale have been found giving a uniform and

* See *Journal of Industries*, February, 1918.

satisfactory clay for pipes, tiles, etc., which are now being produced in the Union on a large scale, and which are competing as roofing materials with the formerly universal galvanized iron.

(xii) *Lignite.*—A form of lignite occurs in the Knysna District of the Cape Province, in an extensive deposit, and impure peat is fairly common in the marshes on the edge of the Transvaal and Basutoland escarpment.

Inferior coal is common in all the Karroo formations. In the Karroo horizon in the Beaufort West and Laingsburg Districts of the Cape Province, veins up to five feet in width, both vertical and inclined, occur, filled with a coal-like substance, which appears to be an inspissated and carbonized bitumen, much in the same way as veins filled with manjac occur in the petroleum districts of other countries. This substance is not at present used, but it is of great scientific interest.

(xiii) *Lime.**—Three forms of limestone are at present known and worked :—

(a) *Magnesian Limestone.*—This is the common dolomite which covers vast areas in the Transvaal and Cape Provinces. It contains up to 40 per cent. carbonate of magnesia. It is largely burnt in ordinary kilns, and yields the common blue building lime of those Provinces.

(b) *White Lime.*—This is a pure white lime used for chemical purposes, and for the cyanide works of the Rand. It is usually obtained from stalagmitic deposits and cave fillings in the dolomite. At Potgietersrust a small area in the dolomite has been found where the beds are free from magnesia, but the deposits are unsatisfactory in size and continuity.

At Taung, in Bechuanaland, an extensive deposit of pure white limestone, said to contain not less than 7,000,000 tons, is now being opened up and connected with the railway. This will prove a most satisfactory development, for, up to date, there has been no adequate and suitable supply of pure limestone, for metallurgical purposes, available in the Union.

(c) *Desert Limestone.*—Vast areas in all the Provinces are covered by a desert limestone of considerable thickness. This, however, generally contains up to 20 per cent. silica and other impurities. It is largely worked near Pretoria, Mafeking, and in the Orange Free State, for cement making. For other purposes it does not generally yield a good lime.

Particulars of the output of lime in the Union will be found in Chapter XVII (Manufacturing Industries).

(xiv) *Magnesite.*†—Magnesite in workable quantities occurs in several places in the Transvaal, notably at Kaapmuiden, where a railway traverses the deposits. It occurs as a " stock-werk " of veins in serpentine. An attempt to work it on a large scale in 1906 failed, but in 1918 the output reached an average of nearly 70 tons per month. This is used for carbonic acid making in Johannesburg, the residue being turned into cupels. The deposits are extensive, but not continuous, and very favourably situated. At the time of the outbreak of war hopes were entertained of an export trade to America, which, however, were not realized owing to the increased freightage.

(xv) *Marble.*—Up to a few years ago the existence of pure marble in the Union was unknown. An inferior marble, or marbleized dolomite, occurs at Port Shepstone in Natal, but attempts to work it systematically have never been attended with success.

Of recent years attention has been called to the existence of a very considerable deposit of marble at and in the neighbourhood of the farm " Marble Hall," in the North Middelburg district. This marble is of great variety, and much of it is of excellent quality. It is fully reported on in the *Journal of Industries* for July, 1919. Unfortunately this deposit is at present some seventy miles from the railway, and it has not, therefore, been developed, although two or three small quarries have been opened on it. With the further development of the railway system of the country, this marble will probably become of great importance—more especially as it, or much of it, gives a pure metallurgical lime, good deposits of which are very scarce in the country.

In the Cape Province marble also occurs in the coast districts of Namaqualand and Van Rhynsdorp, and a black marble at Cango. None of these deposits has, however, been opened. The railway is now approaching the Van Rhynsdorp deposits, and these will probably be exploited.

(xvi) *Mica.*‡—Excellent mica occurs in the Transvaal along the Oliphants River, below the Berg in the Leydsdorp division of the Pietersburg district. The mica here occurs in large books up to 100 lb. and more in weight, in pegmatite lenses in the gneiss. The lenses occur in a line of country over a couple of miles in width and fifty miles long.

---

* See Memoir No. 11, " Limestone Resources of the Union."
† See *Journal of Industries*, March, 1918.
‡ See *Journal of Industries*, April, 1918; also Geological Survey Memoir No. 13.

The mica can be cut in any size up to twelve inches, the majority of it cutting over three inches. It is usually slightly smoky in colour, but has excellent electrical resisting properties. It is now being worked on a small but steadily increasing scale, and there is no reason, now that the product is becoming known, why the industry should not develop steadily.

Mica has also been worked on a small scale at Steinkopf, in Namaqualand.

(xvii) *Mineral Oil.**—Mineral oil occurs in vesicles associated with the intrusive rocks of the Karroo formation. This is probably a distillation product from the carbonaceous beds below. The indications of flowing mineral oil existing in commercial quantities in the Union are not considered favourable.

(xviii) *Oil Shales.*—Beds of oil shale up to 4 feet in thickness, associated with the coal measures, occur in the Transvaal, Natal, and Cape Provinces. Experiments with these shales show that they yield a distillate up to 36 gallons to the ton from representative samples. At the present time a company has been formed to exploit those lying in the Wakkerstroom District of the Transvaal, and a bulk sample has been sent to England for a practical test. The outcrop of these shales extends at intervals for about 200 miles, running along the slopes of the great escarpment.

In 1922 a Committee, consisting of Dr. H. J. van der Byl (chairman), Professor Otto Hehner, Mr. H. J. Ibbotson, Sir R. N. Kotzé, Mr. K. B. Quinan, C.H., and Colonel J. G. Rose was appointed to investigate the question of liquid fuels in South Africa. The terms of reference were briefly to inquire into the possibility of manufacturing power alcohol from South African raw materials (oil shale and coal) and to determine the cost of manufacture, in order to ascertain whether Government support and encouragement were deserving to establish such an industry in the country. The Committee was required to report to Government upon the methods of retorting oil shales and coal submitted to it, to arrange for comparative tests on different South African shales, and to report upon the economic possibility of carbonizing South African coal for the production of motor fuel.

The Committee issued an interim report in March, 1925, which was published in the *Journal of Industries* in May of that year. This report makes a brief survey of the oil industry of the world, and observes that with the exception of the relatively small output from oil shale in Scotland, the world's supply of oil is at present drawn exclusively from oil wells. Oil shales, the report proceeds, are found in unlimited quantities throughout the world, and of these, as well as of coal, the United States possesses vast resources, which, however, are not utilized owing to the enormously greater capital expenditure and high cost of working as compared with wells.

South Africa possesses a considerable area of oil shale conveniently situated and of workable economic value, but it will require very considerable capital expenditure to carry on the industry. The Committee took oral evidence and obtained reports from several torbanite and oil shale companies, who regard the prospects of building up an oil industry as favourable. After making due allowance for what appeared to be over-estimates, the Committee agreed that there was a possibility of establishing a paying industry, especially if Government assistance were forthcoming. Geographically, South Africa is favourably situated for building up an oil shale industry, as all the important oil well centres are far distant, and the inland producer of oil would have in his favour the advantage of many thousand of miles of sea transport as well as cheaper local rail facilities. If the Scottish industry is able to survive under less favourable conditions the South African position should not be hopeless, but great caution would need to be observed in embarking upon the venture.

The final portion of the report was published in the *Journal of Industries* in November, 1925, and recommended a scheme of bounties arranged on a sliding scale and assessed on the market value of the products sold.

(xix) *Nitrates.*—Nitrates have been reported from all the more arid districts of the Union, but on investigation the deposits have never proved more important than cave fillings, where the mineral has been formed from the excreta of animals. An attempt has recently been made to exploit nitrate deposits of this description in the Prieska district, but it did not meet with success.

Geological Survey Memoir No. 14 gives a scientific description of the above deposits.

(xx) *Phosphates.*†—No phosphates were worked in the Union until the last few years, when attention has been called to a very important group of deposits in the neighbourhood of Saldanha Bay. These are of very considerable extent, and their quantities may be estimated by hundreds of thousands of tons. An attempt made to work them during the war period

---

* See Report on Petroleum Prospects of the Union, by E. H. Cunningham Craig, October, 1914.

† See *Journal of Industries*, January, 1918.

met with failure, as the percentage of phosphoric acid did not come up to expectations, though the process used was successful. Since the war the price of imported phosphates has fallen to such an extent that it has not been deemed expedient to reopen the works, though in the future this will probably be done. A full report on the occurrence, by Dr. A. L. du Toit, Field Geologist to the Union Government, is published by the Geological Survey, in Memoir No. 10, 1917.

In the Transvaal, at Lulukop, in the Zoutpansberg District, is a limestone containing some 10 per cent. of apatite, which may also become of economic value.

(xxi) *Pigments* (*Mineral Paints*).—Red haematites and ochres of all descriptions, as well as specularite, occur in the older rocks of the Union.

(xxii) *Salt.*—No deposits of rock salt are known to occur, but in the Cape, the Orange Free State, and the Transvaal Provinces a very large quantity of rough salt is made from the liquor of salt pans. These pans are shallow depressions, often of several square miles in extent, in the surface of the more arid districts. They are without outlet and retain the inflow of water received in the rainy season, with the result that in many cases an excellent supply of brine remains available close to the surface. Such occurrences are worked now in practically every case where the brine is found to be of suitable quality and reasonable transport facilities are available. The great bulk of the salt is obtained entirely by solar evaporation in shallow dams, though, in case of one or two producers, artificial heat has been adopted for final precipitation of the concentrated liquor. The coarse salt obtained by solar evaporation is subject to contamination from dust, and has to be graded in course of recovery according to its apparent quality. A portion of the purest grade is subsequently ground fine for household and dairy purposes and put on the market in suitable form. The quality of this approximates to that of the European article. The Union is now almost self-supporting in this important commodity, but new calls are likely to arise, and there will doubtless be considerable further expansion in the salt industry.

Particulars of the output of salt in the Union will be found in Chapter XVII (Manufacturing Industries).

(xxiii) *Sulphur.*—There are no sulphur deposits of anything but scientific interest in the country, nor are any large deposits of massive pyrites known, except at Areachap in the Cape, near Upington. This mine, however, is in such an inaccessible position that its product cannot hope to compete on equal terms with the imported article.

There are many gossan outcrops in the older formations of the country which have not yet been opened up, and which may lead to sulphide deposits of magnitude. At present the auriferous concentrates from certain mines constitute the only source of sulphur for the sulphuric works attached to the explosives factories. These concentrates carry up to 45 per cent. sulphur, with about 1 oz. of gold to the ton. The supply at present is only some 400 tons per month, while the demand is at least 1,500 tons, the balance being made up by importation.

A comprehensive article on this subject appears in the *Journal of Industries* for November, 1920.

(xxiv) *Soda.*—There is only one notable occurrence of soda in the Union, that at the Pretoria saltpan. This pan is a crater-like depression some 200 feet below the surrounding country, and about 28 acres in extent. The bed of the pan, from which in the dry season all the liquid evaporates, consists of a black mud containing masses of trona. or solid crude carbonate of soda. The mud, which has been proved by boreholes to be at least 200 feet deep, has the following analysis :—

Moisture at 120° C.	50	per cent.
Na_2CO_3	16	,,
NaCl	15	,,
$CaCO_3$	3	,,
Insoluble	12	,,
Organic matter	4	,,
	100	,,

Recent geological work has proved the pan to be an explosion crater, similar to those which have formed the diamond pipes, and of post Karroo age.* The pan contains three valuable ingredients :—

(*a*) Saline mud, described above.
(*b*) Layers of trona or crystallized carbonate of soda.
(*c*) Saline liquor containing approximately 10 per cent. soda and 15 per cent. common salt.

* See Geological Survey Memoir No. 20 : "The Pretoria Salt-Pan : A Soda Caldera." By Dr. P. A Wagner.

In 1912 the South African Alkali Company started to work these deposits. For the first six years the trona only was worked, as that obviously gave the greatest immediate profit, and some 21,000 tons were won. The trona at the surface then gave out, and the Company turned its attention to the mud. So far, it has been found impossible to treat this, as the liquor obtained by artificially leaching the mud will not filter, neither will the impurities settle in a reasonable time.

In 1919, the original company came to the end of its resources, but a further sum of £50,000 was raised, and the control was taken over by another company. The plant was rearranged and completed, and started production in June, 1923. It produced at the rate of 130 tons soda ash per month of a purity of 98·5 per cent. plus some 45 to 50 tons of salt. In so far as the production of salt and soda went, the plant was entirely successful, but the price of production and marketing was not sufficiently below that of the imported article to command success. The local market for soda is nearly all under contract for six months' supplies. When those contracts expired in February, 1924, the company had 900 tons of soda on hand, but their price was undercut by the importers, and they failed to secure the contracts. The Company had, therefore, to suspend operations, as they were not successful in marketing their products.

The question of the dumping of soda was placed under the consideration of the Board of Trade and Industries, and a protective dumping duty imposed, but subsequently removed in April, 1926, when the conditions necessitating the additional protection ceased to operate.

The company is at present (1925) confining its attention to the production of soda. The plant for winning it has been remodelled. Brine is obtained from a series of boreholes in the pan and is subjected to a refrigerating process whereby sodium carbonate with 10 molecules of water is crystallized out. This decahydrate is centrifuged, remelted, evaporated in a vacuum pan and finally calcined.

(xxv) *Steatite** (*Talc*).—Steatite of excellent quality occurs in the Barberton district in very large quantities. Two companies are now producing steatite powder for all purposes, and an export trade is being started.

§ 11. State Aid to Mining.

The fifth and previous issues of this *Year Book* contained full particulars of State aid granted to mining in the various Provinces of the Union at different times. Owing to exigencies of space the information has not been repeated in the present issue.

§ 12. Mineral Laws of the Union.

Particulars of the mining laws of the Union and Provinces were published in previous issues (Nos. 1 to 6) of this *Year Book*, but have not been repeated owing to exigencies of space.

§ 13. Bibliography of Mineral Resources.

The following classified list contains the titles of the principal publications recently issued dealing with the minerals of South Africa. An extensive list was published in No. 7 and previous issues of the *Official Year Book* but has not been repeated here owing to limitations of space.

(i) *Gold.*

CHAPTER XVII.

MANUFACTURING INDUSTRIES.

§ 1. Industrial Censuses.

1. **Industrial Censuses, 1891-1911.**—Although certain manufacturing industries have long been established in South Africa (see § 2 hereunder), the first statistical data in this connection for the Colonies now comprised within the Union were obtained for the Cape Colony at the Population Census of 1891, and for all four Colonies at the Population Census of 1904. These returns were rendered by manufacturing establishments, the annual production of each of which amounted in value to £100 or more. Returns were similarly called for and tabulated at the first Union Census of 1911. The summarized results of these inquiries are given in paragraph 4 below.

2. **Annual Industrial Censuses under the Statistics Act.**—A census of manufacturing industries was undertaken under the *Statistics Act* in 1917, and formed the first special inquiry of the kind in the Union. This is being repeated annually in terms of the Act. The period covered by the first census was the calendar year of 1915, or the business year ended not later than the 30th June, 1916. The large majority of returns were rendered for at least a part, many of them for a full half, of the year 1916, and the census may be taken therefore to have covered substantially the Union business year 1915–16. The scope of the inquiry was directed to the inclusion of all manufacturing establishments within the Union employing four or more hands, or utilizing any form of mechanical motive power. For the census covering the year 1916–17 and subsequent inquiries, the scope has been extended to cover establishments employing three or more hands, or utilizing any form of mechanical power or boilers for steam-heating purposes.

The results of the various censuses have been published in the form of annual reports, which have been supplemented since the end of 1923 by a series of special reports dealing with particular industries.

3. **Classification of Manufacturing Industries.**—Industries relating to the following matters have been specified, and returns obtained accordingly, the classification having been based as nearly as possible upon that adopted by, and in force in, the various States in Australia. In the classification adopted in the first census (for 1915–16), Tanning was included in Class I, Boots and Shoes in Class VI, and Harness and Saddlery in Class VIII. These have subsequently been grouped together under a new Class XV—Leather and Leatherware.

CLASSIFICATION OF MANUFACTURING INDUSTRIES.

CLASS I—RAW MATERIAL.

Boiling down, Tallow Refining, and Bone Milling.
Fellmongering and Wool-scouring.
Chaff-cutting and Corn-crushing.
Other Industries.

CLASS II—STONE, CLAY, ETC.

Bricks, Tiles, Earthenware, and Pottery.
Glass.
Lime Works.
Marble, Stone, Slate Dressing.
Cement Factories, Modelling in Cement, and Plaster.
Other Industries.

CLASS III—WOOD.

Brushes and Brooms, Basket and Wicker Work.
Carpentry and Joinery.
Cooperage, Packing Case and Box Works.
Saw Mills.
Other Industries.

CLASS IV—METALS, ENGINEERING, ETC.

Brass and Copper, Cutlery.
Engineering, Foundries, Blacksmithing (including Mine, Railway, and Tramway Workshops).
Galvanized Iron Works and Plumbing.
Wire Working (including Gate and Fence Making)
Other Industries.

CLASS V—FOOD, DRINK, ETC.

Bacon and Ham Curing.
Butter and Cheese Making.
Fish Preserving.
Meat Preserving.
Ice and Refrigerating.
Bread and Biscuit Making.
Confectionery and Sweet Making.
Flour and Grain Mills.
Fruit Preserving and Jam Making.
Coffee Roasting and Grinding, Tea, Pickle, Sauce and Spice Making.
Sugar Mills and Refineries.
Salt Pans, Salt Works.
Aerated Water Factories.
Breweries and Malt Works.
Distilleries.
Tobacco, Cigar and Cigarette Factories.
Other Industries.

CLASS VI—CLOTHING, TEXTILES, ETC.

Dressmaking and Millinery.
Hats and Caps, Hosiery, Shirts, and Ties.
Tailoring.
Other Clothing.
Bags and Sacks, Mats and Matting, Rope, Cordage and Twine.
Tarpaulins, Tents, and Sails.
Other Textile Industries.

CLASS VII—BOOKS, PRINTING, ETC.

Printing and Binding.
Photo Engraving and Lithographing.
Paper Bags and Cardboard Boxes.
Other Industries.

CLASS VIII—VEHICLES, ETC.

Coach and Wagon Building.
Cycle and Motor Repairing.
Spokes, Wheels, Yokes, Tyres, and other Industries.

CLASS IX—SHIP BUILDING, ETC.

Ship and Boat Building and Repairing.

CLASS X—FURNITURE, ETC.

Chair Factories.
Furniture, Cabinetmaking, and Upholstery.
Mattress Factories.
Picture Frames.
Other Industries.

CLASS XI—CHEMICALS, ETC.

Chemicals, Drugs, Perfumery, Disinfectants, Insecticides, Sheep and Cattle Dips.
Explosives and Matches.
Fertilizers.
Oil and Grease.
Paints, Varnishes.
Soap and Candles.
Other Industries.

CLASS XII—SURGICAL INSTRUMENTS, ETC.

Opticians.
Surgical, Dental, etc., Instruments and Appliances.

CLASS XIII—JEWELLERY, ETC.

Gold and Silver Smiths.
Other Industries (including Electro-Plating).

CLASS XIV—HEAT, LIGHT, AND POWER.

Electric Light and Power Stations.
Gas Works.
Other Industries (including Electrical Engineering).

CLASS XV—LEATHER AND LEATHERWARE.

Tanneries.
Boots and Shoes.
Harness and Saddlery.
Portmanteaux and Bags.

CLASS XVI—BUILDING AND CONTRACTING.

Building and Contracting (including new railway, road, waterworks and irrigation works construction from 1919–1920).

CLASS XVII—OTHER INDUSTRIES.

Miscellaneous.

4. Statistics of Manufacturing Production from 1904.—The main results of the inquiries taken in 1917, and each subsequent year covering the years 1915–16 to 1923–24 are given in the table hereunder in conjunction with those obtained in 1904 and 1911. Comparisons with these two years (1904 and 1911), however, cannot be pressed too closely. It seems probable that in the census of 1904 the returns included in some cases at least figures relating to merchanting, as well as manufacturing; and in the report of the census of 1911 no attempt was made to reconcile the results on that occasion with those for 1904. Clearly, too, the enumeration of distinct works, and the methods of valuing land, buildings, and improvements differed considerably in 1904 and 1911, and again in the regular annual censuses begun in 1917.

Beyond the statement hereunder of the total figures under various main headings as to the returns for the Union and each of the Provinces in 1904 and 1911 no further comparisons between these figures have been attempted, for the reason that those for preceding censuses must be taken with considerable reserve. The annual census under the *Statistics Act* taken for the first time in 1917 has the advantage of a specialized inquiry taken on a basis which will admit of close comparisons being made annually from that date. The value of cotton seed and of the finished article is not included under the headings "Materials used" and "Articles manufactured" as heretofore.

MANUFACTURING PRODUCTION IN THE UNION.—GENERAL SUMMARY—1904, 1911, AND 1915–16 TO 1923–24.

Year.	No. of Establishments.	No. of Employees.		Salaries and Wages Paid to		Fuel Used, etc.	Power Used.	Materials Used.	Value of Gross Output.	Value Added by Process of Manufacturers.

§ 2. Factory Production.*

1. **Number of Factories.**—Particulars are given hereunder as to the number of factories in each Province, and in the industrial centres of the Witwatersrand, Cape Peninsula, Durban, and Port Elizabeth. The classes of industry with which factories are connected in the Union are set out in § 1 (3) above. Factories have been separately enumerated, even when under the same management as other establishments, if concerned with a clearly distinct class of work. In many cases, however, factories have been engaged upon various, often dissimilar, operations, for which it has been found impossible to render separate returns. In such cases the establishment has been enumerated in the subjoined return as a single factory, classified according to the character of the principal industry with which it was concerned.

(i) NUMBER OF FACTORIES IN UNION, 1915-16 TO 1923-24.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1915–16.....	1,970	597	1,157	274	3,998

1919–20.....	3,008	976	2,355	551	6,890
1920–21.....	3,048	1,058	2,355	544	7,005
1921–22.....	3,028	1,155	2,356	516	7,055
1922–23.....	2,975	1,180	2,349	525	7,029
1923–24.....	2,989	1,164	2,440	519	7,112

* A detailed analysis of the results of the Industrial Censuses from 1915–16 to 1920–21 was published in the sixth issue of this *Year Book*. The author of the article is Professor R. A. Lehfeldt, D.Sc., of the University of the Witwatersrand. Owing to considerations of space it has not been possible to repeat the section in subsequent issues.

(ii) NUMBER OF FACTORIES OF EACH CLASS IN CERTAIN INDUSTRIAL CENTRES, 1923-24.

CLASS OF INDUSTRY.	PROVINCES.				UNION OF SOUTH AFRICA.	PRINCIPAL INDUSTRIAL CENTRES (included in Provinces).

2. **Dates of Establishment of Factories.**—The subjoined table indicates the distribution of factories in various sections of industry, classified in each case according to the date of establishment. In a number of cases, principally those of the smaller concerns, the date of establishment is not known, owing generally to the fact that there has been transfer from the original owner. The table illustrates the development of industries of various classes during recent years; and although the mere increase in the number of factories is by itself no sure criterion of industrial progress, the table affords a record of the initiation of new concerns during the various periods specified.

NUMBER OF FACTORIES IN THE UNION, 1923-24, CLASSIFIED ACCORDING TO DATE OF ESTABLISHMENT.

Class of Industry.*	Before 1890.	1890–99.	1900–09.	1910–18.	1919.	1920.	1921.	1922.	1923.	Not stated.	Total.

* For description of industry see § 1 (3) or other similar tables in this chapter.

3. **Capital of Factories.**—The returns asked for in respect of factories in the first two Industrial Censuses included particulars as to capital, made up of (*a*) the value of land and buildings, (*b*) the value of machinery and plant, and (*c*) other capital (outstandings, stocks, cash in hand and in bank, and all movable assets).

The particulars required in respect of land, buildings, machinery, and plant were accepted as reasonably accurate; but in many cases it was found that establishments encountered difficulty in arriving at the true figure as regards total capital; particularly where a manufacturing and a trading business were combined under one amount of capital, or where the capital covered some other class of industry carried on in the same or even in a separate locality. For this reason it was decided to discontinue returns as to capital, and instead to confine the returns to the value of land and buildings, machinery, and plant.

4. **Land and Buildings (Factories).**—The value of land and buildings owned by the occupiers and used as factories is arrived at by giving the Government valuation where such exists, or the municipal or other recognized valuation, or failing such, the price at which the owner is prepared to sell. In the majority of cases a recognized valuation exists and is given, the amount falling under the last alternative being inconsiderable. The following tables give (i) the value as returned in each of the Provinces; (ii) in respect of each class of industry in the Union in each of certain important industrial centres.

(i) VALUE OF LAND AND BUILDINGS OWNED BY OCCUPIERS AND USED AS FACTORIES, 1915-16 TO 1923-24.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

10. **Value of Materials Used in Factories.**—Particulars are given hereunder, in tables (i) and (ii) and (iii), as to the value of materials used in factories of each class of industry, and in tables (iii) and (iv) the value of materials the product of South Africa, included in the value stated in table (i). Difficulty has been experienced in supplying information represented by tables (iii) and (iv), which can only be regarded as roughly approximate.

* Classes combined in industrial centres, owing to small number of establishments concerned.
† Includes Classes XII and XIII.

11. **Gross Value of Factory Production.**—The tables given hereunder show the gross value of production in each class of industry in each Province, and in certain important industrial centres. It must be noted that this return in certain respects represents duplicated values. For example, in such an industry as the manufacture of boots and shoes is included again the value of leather produced by tanneries. Every effort was taken, however, to preclude any duplication of value in respect of any particular industry. The average output per employee, per European employee, and per head of the mean European population, is also given.

(i) GROSS VALUE OF FACTORY PRODUCTION, 1915–16 TO 1923–24.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
	£	£	£	£	£

Average Value of Output per Head of Mean European Population	83	94	157	114	51

* Classes combined in industrial centres, owing to small number of establishments concerned.
† Includes Classes XII and XIII.

12. **Value Added in Process of Manufacture.**—By deducting from the gross value of the output of factories the cost of materials used, is obtained the value added in the process of manufacture, which practically eliminates any such duplication of values as that referred to in the preceding paragraph. The following tables give returns of such value in the case of each class of industry in each Province, and in certain important industrial centres. Particulars are also given in table (ii) as to the average value added, (*a*) per employee, (*b*) per European employee, and (*c*) per head of the European population.

(i) VALUE ADDED IN PROCESS OF MANUFACTURE IN FACTORIES, 1915–16 TO 1923–24.

* Classes combined in industrial centres, owing to small number of establishments concerned.
† Includes Classes XII and XIII.

13. **International Comparison of Factory Returns.**—Some interest and value attach to the comparison represented in the following table as to certain values and other particulars in regard to factory production in the Union, Canada, New Zealand and the Commonwealth of Australia. The basis of returns undoubtedly differs in the various Dominions, economic conditions vary greatly, and the elements of the population are dissimilar, so that the comparisons must not in all respects be taken to be exact. Nevertheless, they afford some indication of the relative importance of manufacturing industries in the countries mentioned.

INTERNATIONAL COMPARISON OF FACTORY RETURNS.

* Excludes working proprietors.

14. **Monthly Index of Industrial Activity.**—Commencing in July, 1922, the Statistics Office initiated the compilation of a monthly index of industrial activity in consultation and co-operation with various manufacturers' associations. The data are obtained from returns rendered monthly by a number of selected establishments in the four principal industrial centres in the Union, viz., the Cape Peninsula and adjoining areas, Port Elizabeth, Durban and adjoining areas, and the Witwatersrand (including Pretoria); and the figures show, by comparison with the results of a base year, the relative condition of employment and activity in each of the principal classes of industry in the different centres concerned. Publication is effected through the medium of the *Monthly Bulletin of Union Statistics.*

§ 3. Individual Industries.

1. **Principal Manufacturing Industries.**—The tables given hereunder furnish particulars of the principal manufacturing industries of the Union. Certain important industries, owing to their small number, have been regrouped in order to avoid disclosure of their identity and operations.

PARTICULARS AS TO PRINCIPAL INDIVIDUAL MANUFACTURING INDUSTRIES 1915-16 TO 1923-24.

YEAR.	Number of Factories	Value of Land and Buildings.	Value of Machinery, Plant, and Tools.	Number of Employees.	Amount of Salaries and Wages Paid.	Cost of Fuel, Light, and Power.	Value of Materials Used.	Value of Output.	Value Added to Materials during Process of Manufacture.
BACON AND HAM CURING ESTABLISHMENTS.

3. **Railway Workshops.**—Particulars are given below as to the output of the workshops of the South African Railways from the year 1915–16. The figures relating to the industry carried on in each establishment have been incorporated with the general returns for the Union, but in view of the special interest and importance which attach to them, the principal figures are given in separate form hereunder, and indicate the magnitude of the productive operations involved. The actual value of the output, measured by the standard which would apply to the usual classes of industrial establishment, would undoubtedly and with perfect legitimacy be placed at an altogether higher figure. It will be observed that as set out in the returns, the value does not greatly exceed the total expenditure on wages, fuel, light, power, and materials.

NOTE.—In most cases "Capital" represents the combined value of land and buildings and machinery, plant, and tools.

§ 4. Board of Trade and Industries.

1. **Division of Industries.**—Upon the constitution of the first Ministry of the Union a portfolio of Commerce and Industries was created which provided for the control of customs and excise, and also of industrial and commercial matters. This portfolio was successively held by Sir Frederick Moor, late Prime Minister of Natal, and Colonel Sir George Leuchars, during whose tenure of office, on a rearrangement of portfolios, the Department of Commerce and Industries was abolished, Ministerial control of customs and excise being vested in the Department of Finance. Matters connected with commerce and industry were then dealt with by a branch of the Customs Department designated as the *Commercial Section.* Simultaneously with these changes the portfolio of Mines, which already included in its administration machinery regulations and the manufacture of explosives, was extended to include industries, with special reference to labour organization as a result of the rise of labour problems connected with the mining and allied industries, the title being altered to that of "Mines and Industries." This arrangement as regards the commercial section of the Customs Department and the industrial side of the Mines Department continued until the middle of 1916, when, owing to the growing importance of questions affecting industrial production as a result of the War, further alteration was found to be necessary, and the work of the commercial section of the Customs Department was transferred to the Department of Mines and Industries, thus concentrating and developing in the one Department the work previously carried on by the two branches.

A further change occurred in July, 1924, in that, upon the constitution of a Ministry of Labour in that month, the Department of Labour took over from the Department of Mines and Industries the existing Labour Division and with it the Control of Relief Works, the Administration of the Industrial Conciliation Act, the Apprenticeship Act, the Juveniles Act, and the Regulation of Wages Act.

In May, 1925, the control of the Trade Commissioner Service, which up to that date had been exercised by several Departments of State, was definitely vested in the Department of Mines and Industries and the Service then formed a section of the Division of Industries.

On the 1st December, 1925, the Board of Trade and Industries assumed control of the functions formerly exercised by the Division of Industries which from that date ceased to exist.

2. **Advisory Boards.**—In October, 1916, an Industries Advisory Board, designed to advise the Minister in regard to the industrial development of the Union, was appointed, and early in 1917, a Scientific and Technical Committee, to deal with scientific methods of research and management, was created. In October, 1918, these bodies were amalgamated under the title of the Advisory Board of Industry and Science. This final Board, having completed the work for which it and its predecessors were constituted, dissolved in January, 1923.

The *Research Grant Board* was instituted by the Government in 1918. It was at first associated with the Advisory Board of Industry and Science, but on the dissolution of the latter became a separate body attached to the Division of Industries, and reporting to the Minister of Mines and Industries and the Minister of Education.

The duties of the Board are generally to advise the Government regarding the practical measures necessary to the encouragement of research within the Union, and to administer all Government grants in aid of research. (See also page 198.)

3. **Publications of Industries Division.**—The publication of a *Journal of Industries** was commenced in September, 1917. This *Journal* served as a medium not only for the dissemination of current information, but for the reports which were being prepared

(*a*) on the natural resources of the Union;
(*b*) by the Board of Trade and Industries;
(*c*) by Departmental Committees.

Reports on the following subjects have already been published in the *Journal.*

A.

1. The Economics of Agricultural Production in South Africa.—(R. A. Lehfeldt, D.Sc.)
2. Hides, Skins, and Leather Manufacture.—(E. R. Swale.)
3. Mineral Oil, Solid Bitumens, Natural Gas, and Oil Shale.—(P. A. Wagner, Dr. Ing., B.Sc., F.R.S.S.A., M.A.I.M.E.)
4. South African Fibre Plants: I. Ambari, or Deccan Hemp; *Hibiscus Cannabinus L.*—(I. B. Pole-Evans, M.A., D.Sc., F.L.S.)

Mechanical Transport in Rural Areas.

The following have been published, not in the *Journal*, but as special memoirs :—

1. The Base Metal Resources of the Union of South Africa.—(Wm. Versfeld, B.A., D.Sc.)
2. Report on Trade Conditions in British East Africa.—Uganda and Zanzibar.—(T. Sleigh, M.B.E.)
3. Native Timber Trees.—(T. R. Sim, Hon. D.Sc., F.L.S., F.R.H.S.)

4. **Board of Trade and Industries.**—The first Board of Trade and Industries was established on the 6th July, 1921. In 1923, the Board was placed on a statutory basis by Act No. 28 of 1923. The first Board was replaced on the 1st October, 1924, by a Board established under Act No. 33 of 1924. On the 1st December, 1925, the Industries Division of the Department of Mines and Industries ceased to exist, and the Board, acting subject to the direction of the Minister of Mines and Industries, assumed control of the functions formerly exercised by the Industries Division. From this date also the Board was authorized to act as the co-ordinating medium between the public and the Trade Commissioners for the Union in matters relating to overseas trade.

The Board consists of a chairman and not more than three other members, who hold office for a period not exceeding three years, and who may be reappointed from time to time for a further period not exceeding three years. The appointment or re-appointment of members provides for their retirement by rotation. The chairman and members receive such salaries or remuneration (out of moneys appropriated by Parliament for the purpose) as the Governor-General may determine.

Subject to the direction of the Minister, the functions and duties of the Board, as defined by Act No. 33 of 1924, shall be to inquire into and advise the Government on all matters concerning the economic development of the natural resources of the Union and its industries and trade, and in particular on—

(*a*) the payment of bounties or other forms of State aid for industries ;
(*b*) fiscal policy in so far as it bears on commerce and industry ;
(*c*) the recasting and revision of the customs tariff ;
(*d*) the removal of anomalies from time to time in the customs and excise tariffs ;
(*e*) complaints or recommendations on the working of the customs and excise tariffs ;
(*f*) combinations, trusts, monopolies, and restraints of trade tending to affect the general interest injuriously, especially by restricting production or maintaining or raising prices ; and the prevention thereof ;
(*g*) the dumping of imported goods whereby Union industries are likely to be unfavourably affected ;
(*h*) the supply of raw materials, labour and technical knowledge for industry, and the encouragement of the investment of capital in industry ;
(*i*) transport and markets for the requisites and products of industries ;
(*j*) the relation between factory, wholesale and retail prices :
(*k*) commercial legislation ;
(*l*) such other matters as the Minister may refer to it for report.

The Board shall report to the Minister on the matters referred to it and on such matters as may be referred to the Board by statutes and, in doing so, it is the duty of the Board

to report as fully as possible on all aspects of any matter referred to it in so far as they may affect the revenue, trade, and commercial and economic conditions, with special reference to the probable effect of any action recommended, on the consumer and those employed in industry.

The Board may take evidence under oath for the purpose of any inquiry falling within its functions and duties and may subpœna witnesses and may examine books, records, or documents which any witness has been required to produce. Penalties are provided for failure to obey a subpœna or for giving false evidence. Penalties are also provided in the case of any member or officer of the Board who discloses information acquired by the Board in the exercise of its powers of hearing evidence on oath.

The recommendations and reports made by the Board upon any matter under the Act must be submitted to Parliament.

The new Board was constituted on the 1st October, 1924, as follows: A. J. Bruwer, M.A., Ph.D. (chairman); Mr. F. J. Fahey; M. H. de Kock, M.A., Ph.D.; Professor H. E. S. Fremantle, M.A. (resigned, 31st July, 1925); G. S. H. Rossouw, M.A., Ph.D. (appointed to the Board on the 1st November, 1925, *vice* Professor Fremantle); Mr. W. F. McMullen (secretary).

The first Board submitted forty-two reports to Government on various matters connected with the trade and industry of the country (Nos. 1–40 below). The second Board has submitted nineteen reports (Nos. 41–57 below). Of these documents those asterisked have not been published. The majority have been made available to the public in the numbers of the *Journal of Industries*, indicated in brackets. Three have been published as "White Papers" by the Government Printer, Pretoria. The following is a full list of the reports issued up to the present:—

Report No.
* 1. General.
* 2. Footwear and Tanning Industry.
* 3. The Cork Industry.
* 4. The Wire Rope Industry.
* 5. The Chicory Industry.
* 6. Butter Making Industry. Maize Exports. Macaroni and Vermicelli Manufacturing Industry.
Table Jelly Powder.
Salt Industry.
* 7. Bounty System (Iron and Steel).
* 8. Boot and Shoe Schedule.
* 9. The Paper Industry.
10. Calcium Carbide Manufacturing Industry, (February, 1924.)
* 11. Bounties on the Export of Meat.
12. Wheat and Flour. (October, 1925; November, 1925.)
* 13. The Footwear Industry.
14. Motor Fuel (increased duty on packed fuel). (November, 1923.)
15. Condensed Milk Industry. (September, 1923.)
16. Bottles and Glass Containers. (January, 1924.)
17. Plywood Manufacturing Industry. (October, 1923.)
18. Acetylene Lamp Manufacturing Industry. (November, 1923.)
19. The Enamelled-ware and Printed and Lithographed Tinplate Industry. (February, 1924.)
20. The Asbestos-Cement Manufacturing Industry. (November, 1923.)
21. Confectionery. (December, 1923.)
22. Golden Syrup and Treacle. (August, 1924.)
23. The Maize By-products Industry. (October, 1923.)
24. The Paint Manufacturing Industry. (November, 1923.)
25. Detonators. (March, 1924.)
26. Raw Materials and Requisites for use in Industry—Rebate of Customs Duties. (November, 1923.)
26*a*. Raw Materials and Requisites for use in Industry—Rebate of Customs Duties. (November, 1923.)
27. Bacon and Ham Industry. (December, 1923.)
27*a*. Bacon and Ham Industry. (January, 1925.)
28. Shirt, Collar, and Pyjama Suit Manufacturing Industry. (February, 1924.)
* 29. Adulterated Leather Bill and Imported Footwear.
30. Cement Dumping. (May, 1924.)
* 31. Leather Goods. (Adulteration of Leather.)
32. Wattle Growing and Wattle Tanning Extract Industries. (September, 1924.)
33. Carbonate of Soda Manufacturing Industry. (October, 1924.)
34. Restraint of Trade. (June, 1924.)

* 35. The Cigar and Cheroot Manufacturing Industry.
* 36. Re-organization of the Board of Trade and Industries.
37. Working of the Beef Export Bounties Act, No. 12 of 1923. (November, 1924.)
38. Dumping. (December, 1924.)
* 39. Cigarette Manufacturing Industry (Alleged Unfair Competition).
40. Work of the Board of Trade and Industries, 1921–1924. (January, 1925.)
41. Dumping Duty on Wrapping Paper. (January, 1925.)
28*a*. Silk Shirting—Free Admission of. (July, 1925.)
42. Dumping or Unfair Competition. (July, 1925.)
43. The Rise in the Price of Bread. (April, 1925.)
44. The Salt Industry (Interim Report). (July, 1925.)
* 45. "Contex" Floor Covering.
46. South Africa and Imperial Preference. (White Paper.)
47. Acetic Acid for Industrial Purposes. (July, 1925.)
48. Dumping Duty on Mozambique Cement. (July, 1925.)
* 49. Dobo Grass in Pondoland for Manufacture of Pulp and Paper.
* 50. Harrismith Woollen Mills—Application for Financial Assistance.
51. Revision of the Customs Tariff. (White Paper.)
* 52. Nutresco Meat Extract.
* 53. Adulteration of Leather.
* 28*b*. Free Admission of Shirting.
54. Meat, Fish, and other Foodstuffs—Inquiry into Trade Combinations, Supplies, Distribution, and Prices. (White Paper.)
* 55. Ostrich Feather Industry.
* 56. Dumping of Sugar from U.S.A.
* 57. Dumping of Mozambique Sugar.

§ 5. Miscellaneous.

1. Iron and Steel Industry Encouragement Act, 1922.—Following the lines of a report submitted by the Board of Trade and Industries in June, 1922, this Act (No. 41 of 1922) makes provision for the payment, out of the Consolidated Revenue Fund, of bounties in respect of pig-iron and steel produced in the Union from ores mined in the Union. These bounties are to be paid only if the plant is capable of producing at least fifty thousand tons of pig-iron or steel per annum. Advances, if desirable, may be made to the producer prior to the stage of production having been reached, provided that these advances do not exceed in any one year the amount of bounties which would be obtained if the stage of production had been reached. Every producer desirous of obtaining a bounty under the Act must notify the Minister of his intention to commence production and furnish particulars of the company and the plant. The Act further provides (1) for the nomination by the Governor-General of a representative on the board of directors of any company receiving a bounty; (2) for the examination of the books and accounts of any producer desirous of obtaining a bounty; and (3) for the preparation by the Treasury of annual returns of particulars of bounties paid.

The Schedule to the Act sets forth the rates at which the bounties are to be paid, as shown in the following table:—

IRON AND STEEL BOUNTIES (ACT NO. 41 OF 1922).

Financial Year.	Per Ton of Pig-Iron or Steel Produced.
	s. d.
1924–5	15 0
1925–6	15 0
1926–7	15 0
1927–8	12 6
1928–9	10 0
1929–30	7 6
1930–1	5 0
1931–2	2 6

2. **Electricity Act, 1922.**—This Act (No. 42 of 1922) provides for the appointment of a Commission of from three to five members to establish, acquire, maintain, and work undertakings for an efficient and cheap supply of electricity in the Union, and to investigate new or additional facilities for that supply. The powers of the Commission are wide, and include the appointment of officers, the purchase or sale of plant and property, the purchase or sale of coal, steam, water, and other materials and stores, and the manufacture and sale of by-products. The Commission was appointed on the 1st March, 1923, and is composed of the following members: Dr. H. J. van der Bijl (chairman), J. R. Fulton, and R. Niven, with A. C. McColm as secretary.

The Act further provides for the appointment of a Board to control the supply of electricity by the Commission or any private undertaking. The Electricity Control Board was first appointed under the Act on the 28th August, 1922, and now consists of the following members: Dr. Hans Pirow, D.Sc., Government Mining Engineer (chairman), C. J. Lansdown, K.C., and C. Mullins, Chief Inspector of Machinery, with R. Stourton as secretary.

Regulations under the Act were published on the 8th December, 1922.

The Electricity Supply Commission commenced its activities in March, 1923, and since that date a number of electrical undertakings were made the subject of investigation by the Commission, which has had in view from the outset the possibility of assisting industries by means of cheap power. In consultation with the other interests concerned the Commission entered into the following undertakings:—

(1) The erection of a power station (capacity 60,000 kw. maximum continuous rating) in the Witbank area, at an estimated capital cost of £1,079,500, to be built and operated by the Victoria Falls and Transvaal Power Company, Limited, for and on behalf of the Commission.

(2) The establishment of an electrical undertaking (capacity 30,000 kw.), at Cape Town, primarily to supply the power required for the proposed electric working of the Cape Peninsula suburban railways, but also to serve the whole of the Cape industrial area. The estimated capital expenditure for which the Commission is responsible is £977,500.

(3) The control of the Colenso power station (capacity 60,000 kw.) erected by the South African Railway Administration in connexion with the electrification of portion of the Natal main line.

(4) The erection of a power station in the Durban area, to supply power to the Durban Corporation and ultimately to be linked up with any electrical undertaking necessitated by the proposed extension of the electrification scheme of the Durban–Pietermaritzburg railway line.

(5) The provision of a hydro-electric power scheme in the Sabie area, Northern Transvaal, in the interests of the numerous small mining concerns in that area.

Under the *Electricity Act* the Commission is required to report upon any proposals by a municipality for the establishment of a new electricity undertaking or the enlargement of an existing scheme to an extent exceeding, within a period of twelve months, 10 per cent. of its existing rated generating capacity. Up to June, 1925, forty-nine municipal schemes were reported upon by the Commission.

CHAPTER XVIII.

COMMERCE.

§ 1. Customs Unions and Conventions.

1. **Customs Union Conventions.**—The first Customs Union Convention was entered into between the Colony of the Cape of Good Hope and the Republic of the Orange Free State in 1889. An account of the terms of this Convention, of the Customs Conference at Bloemfontein in 1896, the Customs Conventions of 1898 and 1903, the Conference of 1906, and of the Customs Convention which resulted, is given in the fourth and previous issues of this *Year Book*. The particulars have not been repeated owing to exigencies of space.

2. **Transvaal–Mozambique Convention.**—The Transvaal–Mozambique Agreement was a Convention entered into between the Transvaal Government* and the Government of the Province of Mozambique in 1909 (2nd April), to remain in force for ten years from that date, and thereafter until either party to the agreement gave one year's notice of intention to terminate it. The Convention replaced the *Modus Vivendi* which had been signed on the 12th December, 1901 (with addition signed on the 15th June, 1904), and dealt with customs matters, the circulation of commerce, native labour, and railway traffic between the two territories. Under these heads it provided for the free entry into the colonies of the products of the soil of either and for the recruitment of native labour in Mozambique for the Transvaal mines. It was also provided that by the periodical revision of railway rates it would be ensured that from 50 to 55 per cent. of the railway traffic to what are known as the *competitive areas* of the Transvaal, should come through Lourenco Marques. These percentages from 1914 were as follows :—

1914 : 48·79 ; 1915 : 36·17 ; 1916 : 31·19 ; 1917 : 35·41 ; 1918 : 27·86 ; 1919 : 33·33 ; 1920 : 37·97 ; 1921 : 43·99 ; 1922 : 52·86 ; 1923, 47·41.

The Convention was denounced by the Union Government by notice dated the 1st April, 1922, negotiations for a new agreement being subsequently initiated. As no agreement was arrived at by the 31st March, 1923, when the notice expired, the Convention in its old form lapsed on that date. It was, however, arranged by the two Governments that Part I of the Convention, dealing with native labour, should be prolonged provisionally, subject to six months' notice. The text of this part will be found in the sixth issue of this *Year Book*, Chapter XXVII.† Furthermore, by agreement between the two Governments, the following articles of Part III of the Convention, relating to commercial intercourse and customs, remained temporarily in force, in view of the magnitude of the transit trade between the Union and Mozambique :—

XXXV. Merchandise of any origin or nationality imported through Lourenco Marques and bound for the Transvaal shall be entirely exempt from any charges whatsoever, excepting port and warehousing charges and the charges now known as Industrial Contribution.

XXXVI. Goods *ex* bond and *ex* open stocks within the Lourenco Marques district shall be admitted into the Transvaal upon payment of the duties in force in the Transvaal at the time of entry thereto, such duties being estimated on the oversea value of goods in the case of goods under the *ad valorem* classes.

For the purpose of this article, importers will be required, on arrival of the goods at Lourenco Marques, to pay the Transvaal duties to the Transvaal Customs, or to satisfy such Customs as to the due payment of those duties. Importers will be required to produce, when necessary, proof to the satisfaction of the Transvaal Customs as to the values of the goods, and to furnish any further information which may be required for the protection of the Transvaal revenue. In the case of goods on which Transvaal customs have been paid not entering the Transvaal, the amounts so paid shall be refunded by the Transvaal Customs to the importers.

XXXVII. With respect to goods imported into the Transvaal and exported therefrom through the port of Lourenco Marques, no higher export duties shall be imposed either in the Transvaal or in Lourenco Marques than are levied on similar goods exported through the ports of the Cape Colony and Natal.

XXXVIII. No higher duties or other taxes shall be levied in the Transvaal on goods imported thereto through the port of Lourenco Marques than are levied on similar goods imported into the Transvaal through the ports of the Cape Colony and Natal.

XXXIX. It shall be lawful to re-export from the bonded warehouses in Lourenco Marques any merchandise imported thereto, and the said merchandise shall be exempt from any export or re-exportation duty, and shall only be liable to the payment of warehouse charges and fees and of port dues. The provisions of this article shall apply only to such merchandise as the Portuguese Customs authorities are satisfied has been bona fide ordered for the Transvaal.

---

* After the constitution of the Union in 1910, the terms of the Convention became applicable to the whole of the Union.

† The complete text of the Convention was published in the fifth and previous issues of this *Year Book*.

In addition, potatoes, onions, malt, coal, fresh fruit, fresh vegetables, fresh butter, eggs and poultry, the produce of the Union, are admitted into Mozambique free of duty.

3. **East African Trade Delegation.**—A delegation, consisting of Sir Ernest Chappell (chairman) and Messrs. J. D. Heddon and W. H. L. Pybus, was sent in October, 1922, to investigate and report on reciprocal trade relations between Kenya, Uganda, and Tanganyika, and the Union of South Africa. A draft agreement was drawn up, which was given in detail in the sixth issue of this *Year Book*.

4. **Madagascar Trade Conference.**—In response to the invitation of the French Government, Mr. J. D. Heddon, representing the Union Government, and Mr. A. Buchanan, on behalf of the Associated Chambers of Commerce of South Africa, visited the first exhibition (La Foire Commerciale) held in Madagascar in 1923. The opportunity was taken to hold an Economic Conference, at which representatives of Madagascar, Réunion, Mauritius, and the Union of South Africa were present. The principal obstacles in the way of an export trade to Madagascar are (1) an unfavourable Customs tariff, (2) an infrequent and irregular steamship service, and (3) the low exchange value of the franc. The second obstacle will to some extent disappear if the volume of trade increases, and with that object in view the Conference adopted two resolutions, recommending that the Colony of Madagascar should accord the benefit of the minimum tariff to certain goods of South African origin exported from the Union of South Africa, in return for which the Union of South Africa should allow special rebates of duty in respect of certain goods of Madagascar origin exported from Madagascar. Further details will be found in the report on the Madagascar Trade Conference published in August, 1924.

§ 2. Union Customs Management and Tariff.

1. **Customs Management.**—In terms of section 136 of the *South Africa Act*, 1909, there is free trade throughout the Union. The application of customs control, therefore, affects only the trade of the Union with other countries, carried on in the main with countries overseas.

The management of the Customs of the Union is provided for by Act No. 9 of 1913 (*Customs Management Act*), which became operative on the 1st August, 1913, in substitution for numerous laws previously in force in the various Provinces. The control and management of the collection of duties is vested in a Commissioner of Customs. Every person employed on any duty relating to customs by order or with the concurrence of the Governor-General, or of the Commissioner of Customs, is an officer of customs. Provision is made for the boarding and searching of ships, the sealing of goods, the taking of samples, and the appointment of ports and landing places—free warehousing ports, or ports for limited purposes.

All duties collected are paid into the Union Treasury and are levied on weights and measures established by law in the Union. When notice is given in the House of Assembly by any Minister of State of a resolution to affirm the expediency of increasing any customs dues, the officer of customs is empowered to demand a bond from importers to cover the payment of any such increase which may thereafter be imposed; but such bond may only extend over a single session of Parliament.

(i) *Prohibitions of Importations.*—The goods enumerated in the following list are prohibited to be imported into the Union:—

(*a*) Goods which, being foreign manufacture, bear the name, mark, or brands of manufacturers resident in the United Kingdom or any British possession, or which, whether of foreign manufacture or not, bear marks contravening the provisions of any law in force in the Union relating to merchandise marks.
(*b*) Coins, base or counterfeit.
(*c*) Indecent, obscene, or objectionable prints, paintings, photographs, books, cards, lithographic or other engravings, or any other indecent, obscene, or objectionable articles; in the event of any question arising as to whether such articles are indecent, obscene, or objectionable, the decision of the Minister shall be final.
(*d*) Prison-made and penitentiary-made goods.
(*e*) Printed books, music, and newspapers which are unauthorized prints of any works which are copyright in the United Kingdom or the Union or any British possession.
(*f*) All animals, articles, matter or things, the importation of which is from time to time prohibited by or under the authority of any law.
(*g*) Carbide of calcium which, when treated with water, yields less than 250 litres of gas from one kilogram, the gas being measured at 15° C. under a pressure of 760 millimetres of mercury.
(*h*) Second-hand boots and shoes.

Restrictions are imposed upon the importation of habit-forming drugs. In addition to forfeiture a penalty is imposed on any person importing prohibited goods.

(ii) *Obligations of Importers.*—No importation of goods into the Union may be made without due entry and the payment of any customs dues. Every person carrying on business in the Union is required to keep within the Union reasonable and proper books or accounts of his tranactions in one of the official languages of the Union, and within two years after the date of any importation may be required to produce bills of lading, invoices, and other documents relating to the goods. The particulars to be contained in invoices are prescribed by regulation. Any person offering goods for sale, or removing them, or having such goods entered in his books, may be required to produce proof as to the person from whom the goods were obtained, and, if he is the importer, as to the place where the import dues were paid.

(iii) *Entry Inwards.*—The master of every ship is required to report in person, or by his authorized agent, within twenty-four hours after the arrival of his ship in a Union port. Due entry of goods must be made before landing. Importers must effect entry within fourteen days of a ship's arrival. In default, the goods may be conveyed to the *King's Warehouse*, and, if not cleared within three months, may be sold.

Station masters on the railways are required to report the arrival of goods from without the Union by train. Similarly, persons arriving overland with goods are required to report.

Undervaluation of goods is punishable with fine.

Provision is made for bonded warehouses under licence of the Commissioner of Customs. Heavy penalties are imposed in respect of unlawful warehousing and smuggling.

(iv) *Exportation of Goods.*—The exportation or carriage coastwise of arms, ammunition, military and naval stores, or goods being capable of conversion into such stores, may be prohibited. Entry outwards has to be made in respect of every ship bound from the Union, delivery being made to the officer of customs of a content of goods loaded in such ship with other particulars. Exporters are required to deliver a bill of entry, and export duty (if any) must be paid.

Special provisions are made in respect of coasting trade between Union ports.

(v) *Ports of Entry.*—Under the *Customs Management Act* the following places have been proclaimed ports of entry for the Union to or through which goods may be imported, or through which alone they may be exported :—

Cape Province.—Cape Town, Port Elizabeth, East London, Mossel Bay, Port Nolloth, Knysna, Simonstown, St. John's River, Kimberley.

Natal.—Durban, Manyoka Gate, Mtini, Ingwavuma.

Transvaal.—Johannesburg, Pretoria, Germiston, Boksburg, Krugersdorp, Roodepoort, Main Drift (on the Rhodesian-Transvaal border), Komatipoort, and Liebig's Drift.

Orange Free State.—Bloemfontein.

South-West Africa.—Walvis Bay, Luderitz.

In addition to the above the following ports have been proclaimed ports of export only :—St. Helena Bay, Hout Bay, Struys Bay, Hondeklip Bay, Saldanha Bay, Lambert's Bay, Port Beaufort.

(vi) *Free Warehousing Ports.*—The following places have been proclaimed free warehousing ports for the purpose of warehousing and securing goods :—Cape Town, Port Elizabeth, East London, Mossel Bay, Simonstown, Kimberley, Durban, Pietermaritzburg, Johannesburg, Pretoria, Germiston, Komatipoort, Bloemfontein, Walvis Bay, Luderitz.

(vii) *Declaration of Value.*—(a) *Imports.*—For goods subject to an *ad valorem* duty, the value of such goods shall ordinarily be taken as—

(i) the market price at which at the time of exportation such or similar goods are offered for sale, for consumption in the country from which the goods are exported, to all purchasers in the usual wholesale quantities in the ordinary course of trade in the principal markets of such country, including the cost of packages ordinarily used in these markets, but not including excise duties payable in that country, or

(ii) the f.o.b. cost of the goods to the importer, including agents' or buying commission in excess of 5 per cent., whichever is the greater.

b) *Exports.*—The value of South African goods exported is their current value in the open market at the port of shipment, including the cost of packing and packages. For *re-exports* from open stocks, the f.o.b. price is given, and in the case of exports from bond, the value recorded is that at which the goods were originally warehoused.

(viii) *Customs Investigation Officer in U.S.A.*—Since the beginning of 1923 a Customs Investigation Officer for the Union of South Africa has been established in New York for the purpose of examining the invoices and shipping documents of American and Canadian exports to the Union, inquiring into the domestic value of similar goods in America and investigating into the country of origin of Canadian goods shipped *via* the United States.

A similar officer was stationed in London at the beginning of 1926 for the purpose of investigating the values of goods shipped from the United Kingdom and the Continent of Europe.

(ix) *Duties on Spirits.*—An amendment of Act No. 9 of 1913 was effected by Act No. 27 of 1919, the main provision of which was to make retrospective any increase of duty resolved upon under the Excise Act (1913) and under the Customs Acts as regards spirits (beverages) in stock on the date of any notice of proposed increase issued under the law.

2. **Statistics of External Trade.**—Prior to July, 1905, each Colony or Territory in the Customs Union had its own statistical department recording particulars of its import, export, and inter-colonial trade. In addition, each maintained what was generally known as a Customs Union Office, where records were compiled of the trade between the parties to the Union. From such records was ascertained the amount of Customs duty due to each party in the Customs Union. In 1904 the Governments of the countries in the Union decided that it was desirable that statistics relating to the import, export, and inter-colonial trade should be kept on a uniform basis and by an office created for the purpose.

Since the coming into operation of the *South Africa Act* the compilation of trade statistics has been continued under the Union Government.

It should be noted that for statistical purposes the Protectorates of Basutoland, Swaziland, and Bechuanaland are regarded as integral parts of the Union of South Africa, and no separate information is available for their trade, whether direct to or in transit through the Union, other than the estimates for Basutoland given in Chapter I of Part II of this *Year Book.*

3. **Preference.**—The first record of preferential rates of duty is to be found in the records of the Cape Colony. From 1821 to 1830 the duty was approximately 3 per cent. *ad valorem* on British goods, and 10 per cent. on foreign goods and those imported from the East.

Again, in 1840, by an Order-in-Council, dated the 10th August, differential rated duties were imposed on certain articles and these early differential tariff rates were continued, subject to variations, until 1855, when they were abolished by the Customs Tariff Act of that year. From that time until 1903 duties of Customs were levied equally on all goods and articles imported irrespective of the country of origin or manufacture. In that year, under the Customs Union Convention concluded between the Cape Colony, Natal, the Orange River Colony, the Transvaal, and Southern Rhodesia, it was agreed as follows :—

> A rebate of Customs duties shall be granted on any goods and articles the growth, produce, or manufacture of the United Kingdom imported therefrom into the Union for consumption therein, and that a rebate should also be granted on goods and articles the growth, produce, or manufacture of any British Colony, Protectorate, or Possession granting equivalent reciprocal privileges to the Colonies and Territories in the Customs Union.

Rebates of duty were continued in subsequent Conventions, and have been continued since the constitution of the Union in favour of the United Kingdom and those British dominions which have afforded reciprocal treatment, viz., Canada, Australia,* and New Zealand.

The *Customs Tariff and Excise Duties Amendment Act*, No. 36 of 1925, makes provision for preference as a fundamental factor in the general tariff policy of the country, but its application is based upon an entirely different principle from heretofore. In addition to extending preference to a list of scheduled goods produced and manufactured in the United Kingdom (second schedule, Part I of the Act), it further provides for the extension of equivalent reciprocal privileges as between the Union and any* British dominion, colony or possession, and for tariff agreements to be entered into with foreign nations, on the principle of the most favoured foreign nation treatment, in consideration of the extension by the contracting State of equivalent reciprocal tariff privileges in respect of goods imported into its territory from the Union. These agreements are, however, subject to the limitation that they may not apply to such goods or articles, named in the second schedule, Part I, of the Act, to which preference has been granted to the United Kingdom.

The amounts of rebates permitted are set out in the customs tariff given in paragraph 5 below.

The principle of Imperial preference was adopted by the British Parliament in 1919. Preference is given on the duties in force in the United Kingdom to the following articles, the produce of countries within the British Empire, at the specified rates :—

One-third of the duty on clocks and watches, motor cars and accessories, musical instruments and accessories, cinematograph films, cutlery, gloves, lace and embroidery, hops and heavy wines.

One-fourth of duty on tobacco, cigars, cigarettes, and snuff.

---

* On the 1st July, 1926, the Commonwealth Government withdrew the preferential tariff on goods produced or manufactured in the Union, and from that date the preference on Australian goods named in Part III of the Second Schedule to Act No. 36 of 1925 ceased to operate.

One-sixth of duty on chicory, cocoa, tea, coffee, silk, and artificial silk.
One-half of duty on sparkling wines, and two-fifths on light wines.
Brandy, rum, gin, and unsweetened potable spirits are rebated 2s. 6d. per proof gallon.
Sweetened wines, naphtha, and methylic alcohol, 2s. 8d. per proof gallon.
Perfumed spirits, 4s. per proof gallon.
Sugar, glucose, chutney, dried, preserved, and crystallized fruits, jams and jellies, condensed milk (sweetened), the rebate varies from 2s. to 4s. 3d. per cwt.
Saccharine and like substances, 22s. per lb.

4. **Protection.**—*Normal Tariff.*—Act No. 36 of 1925, which amends and supersedes the customs tariff formerly in force, has been designed primarily for the purpose of encouraging industrial development within the Union. A distinctive feature of the new tariff is its division into maximum and minimum rates or duties. Normally, the maximum rates are imposed and collected on all goods subject to the tariff imported into the country, but provision is made that in the event of its being reported to the Minister through the appropriate official channel that any protected industry is—

(*a*) charging unduly high prices for any product; or
(*b*) acting in a manner which tends to such restraint of trade or the establishment of such a monopoly as is injurious to the public interests; or
(*c*) maintaining unsatisfactory labour conditions;

the Governor-General may, by proclamation, after due notice has been given to the industry, declare that the minimum duty shall be levied and collected in respect of the article concerned.

Suspended Duties.—In addition to the maximum and minimum rates provided for in the tariff, provision is also made for a scheme of suspended duties to be imposed upon certain imported manufactured goods when occasion arises. These duties may be brought into force by proclamation on any specified article whenever the prevailing imposts are found to provide an inadequate protection to the industries which they are designed to assist.

Dumping Duties.—(i) The principle of a special dumping or countervailing duty was first introduced into the customs legislation of the Union by Act No. 26 of 1914 (Section 8), and became recognized as a fundamental factor in the economic development of the Union by its inclusion in the *Customs and Excise Amendment Act*, No. 23 of 1923 (Section 12). Act No. 36 of 1925 (Section 15) provides that dumping duties shall be imposed whenever, after investigation and report by the responsible official authority, the Minister is satisfied that goods which are of a class or kind produced or manufactured in the Union have been or are being exported to the Union—

(*a*) at an export price which is less than the domestic value thereof, plus the extra cost of packing and packages for export, carriage to the port of shipment, and all other expenses incidental to placing the goods on board ship ready for exportation to the Union; or
(*b*) at an export price, which, owing to the depreciated exchange value of the currency of the country in which the goods were produced or manufactured, or from which they were exported, is less than the export price of goods of the same class or kind imported into the Union from countries the exchange value of whose currency in relation to Union currency is not depreciated by more than five per centum, and from which such goods on importation are not otherwise liable to any dumping duty in terms of this section; or
(*c*) at a rate of freight lower than the rate prevailing at the date of shipment for those classes of goods usually rated for shipping purposes on the same basis, or at ballast rates of freight, or freight free, or that, by reason of the granting of rebates, refunds, or other allowances, the net amount of freight payable is lower than that prevailing at the date of shipment; or
(*d*) are being sold or offered for sale at a port of entry in the Union in the usual and ordinary course of trade for an amount which is less than the domestic value thereof, plus the extra cost of packing and packages for export, inland carriage, sea freight, insurance, and all charges to that port, including landing and delivery charges, and any duty (other than a dumping duty) payable under this Act or any amendment thereof; or
(*e*) on which a bounty has been or will be granted in respect of such goods in the country in which they were produced or manufactured or from which they were exported, by way of a bonus, rebate, subsidy, or otherwise, whether granted by a Government or other authority or person.

(ii) The dumping duties which may be imposed in terms of section 15 of the Act are—

(*a*) "ordinary" dumping duty, which shall be the difference between the export price and the domestic value plus the extra cost of packing and packages for export, carriage to the port of shipment, and all other expenses incidental to placing the goods on board ship ready for exportation to the Union; provided that such difference is greater than five per centum of the export price;

(*b*) "exchange" dumping duty, which shall be the difference between the export price of the goods in question and the export price of goods of the same class or kind imported into the Union from countries the exchange value of whose currency in relation to Union currency is not depreciated by more than five per centum, and from which such goods on importation are not otherwise liable to any dumping duty in terms of this section;

(*c*) "freight" dumping duty, which shall be the difference between the net freight paid or to be paid and the freight which would have been payable at the rate prevailing at the date of shipment, for those classes of goods usually rated for shipping purposes on the same basis; provided that such duty shall not apply to goods of which the value for duty purposes, added to the marine insurance and freight charges, exceeds ten pounds per ton of 2,240 lb.;

(*d*) "sales" dumping duty, which shall be the difference between the selling price in the Union and the domestic value plus the expenses and charges set forth in paragraph (*d*) of sub-section (i) above;

(*e*) "bounty" dumping duty, which shall be the amount of the bounty referred to in paragraph (*e*) of sub-section (i) above.

The following table gives the particulars of the proclamations issued, the country of origin, and the nature of the articles upon which dumping duties have been imposed :—

PROCLAMATION IN REGARD TO DUMPING DUTIES.

No.	Year.	Form of Dumping.	Article.	Whence.
† 83*	1921	Ordinary	Wheaten flour	Australia.
† 173*	1921	Ordinary	Wheat	Australia.
‡ 12*	1923	Ordinary	Cement	Belgium and Denmark.
‡ 19*	1923	Ordinary	Cement	Norway.
§ 44*	1923	Ordinary	Cement	Great Britain.
118	1923	(Amending Proclamations marked *.)		
† 141	1923	Freight..	Cement	Great Britain, Belgium, Denmark, Germany, Holland, Norway, and Sweden.
3	1924	Exchange	Asbestos-cement sheets	Belgium and Italy.
‖	—	Exchange	Cement and superphosphates	Belgium.
21	1924	Ordinary	Rubber hose	United States of America.
41	1924	(Amending No. 3 of 1924.)		
69	1924	Sales....	Rubber hose	United States of America.
§ 70	1924	Ordinary	Cement	Germany.

165	1926	Sales....	Rubber heels	United States of America.
170	1926	Ordinary	Rubber heels	Canada.
171	1926	Sales....	Rubber heels	Canada.

Free List.—The goods described in Class XV of the tariff are admitted into the Union free of customs duty subject to such conditions and regulations as the Minister may prescribe, and provided that the goods are imported for use only in the manufacturing industry for which they are declared.

5. **Customs Tariff.**—The customs tariff of the Union, established by Act No. 36 of 1925 and amending Act No. 34 of 1926, is given hereunder. The *first* schedule of the tariff is classified under fifteen principal headings; the fifteenth, however, has reference only to the free importations of dutiable materials for industrial purposes as described in paragraph 4 above. The list of the various articles included under each class is arranged in alphabetical order and against each item is placed its relative tariff number, the unit upon which the rate of duty is levied, and the minimum and maximum custom rates charged.

† Since repealed.
‡ Since repealed in so far as Denmark is concerned, but in the case of Belgium superseded by Proclamation No. 109 of 1926 under Act No. 36 of 1925.
§ Superseded by Proclamation No. 109 of 1926 under Act No. 36 of 1925.
‖ Since repealed in so far as superphosphates from Belgium are concerned, and superseded by Proclamation No. 110 of 1926 in respect of cement from Belgium.

The *second* schedule (page 605) indicates the extent of the rebate on the maximum tariff applicable to goods the product and manufacture of Great Britain and such other British dominions, colonies, or possessions, with which agreements may have been concluded for equivalent reciprocal privileges.

Tourists' Effects, Firearms, etc., Re-exported.—Upon due notice being given to the Collector of Customs at the port of shipment, and the production of proof of the original payment of duty, a refund will be made of the customs imposts levied on articles imported by *bona fide* tourists for their own use, but not intended for consumption within the Union, provided such goods are exported within six months of their importation.

Settlers' Household Effects.—A rebate of duty is allowed on the personal household effects of settlers arriving in the Union, provided that the effects are the *bona fide* property of the settler and have been in use by him prior to shipment to the Union, and that they are not intended for sale or for disposal to other persons.

The extent of the rebate of import duty on the household effects of settlers is limited to a proportionate value of £100 of effects for each adult, £50 for each child, with a maximum of £400 in respect of any one family.

CUSTOMS TARIFF.—EXPLANATORY NOTES.

Mixed Goods.—Goods mixed or made up of more than one article liable to duty under any of the classes of the tariff, and not chemically forming another distinct substance, are chargeable with the full duty payable on the article charged with the highest rate of duty and as if such article formed the whole composition.

Adulterated Leather means leather containing—

(*a*) any barium or lead compound; or

(*b*) *if vegetable tanned*—
(1) more than 2½ per cent. of mineral ash; or
(2) more than 2 per cent. of glucose;

(*c*) *if mineral tanned*—
(1) more than 2 per cent. of mineral ash other than the mineral tanning agent; or
(2) more than ½ per cent. of glucose;

(*d*) *if tanned by vegetable and mineral agents combined*—
(1) more than 2 per cent. of mineral ash other than the mineral tanning agent; or
(2) more than ½ per cent. of glucose.

Proof means the strength of proof as ascertained by Sikes' hydrometer.

Proof Spirits means spirits which, at a temperature of 51° F., weigh 12/13ths of an equal measure of distilled water.

Bees, Honey, and Beeswax, etc.—The introduction of bees, their larvae or eggs, into the Union from any place oversea is, except under certain restrictions, prohibited; and the prohibition also applies to honey, used beehives, used beehive accessories or appliances, or anything which has been used to contain or manipulate bees, honey, or beeswax. The introduction into the Union from any place oversea or from any place in South Africa which is not a British Possession or Protectorate, of beeswax, whether crude or refined, or foundation comb, is prohibited, except on permit from the Department of Agriculture.

Bulk Goods.—The term *bulk* is defined as follows:—

(i) Loose without packing or loose in barrels, carboys, casks, drums, kegs, or other single outside package. A few battens used to keep drums together, provided they do not constitute a *bona fide* outside package, will not be held to do away with the bulk nature of the goods.

(ii) That the net contents of any immediate container of goods weigh not less than 10 lb. or measure not less than 1 imperial gallon.

Labelling of Net Weights on Containers.—All tins and other receptacles of reputed weights containing ingredients liable to a rated duty must bear, printed conspicuously across *that portion of the label which is usually presented to the public*, the actual weight of the contents; otherwise duty will be levied on the reputed weight or measures.

NOTE.—Goods consigned for delivery in the Union from places outside the Union in containers marked with a specified weight or measure are not permitted to be cleared for entry unless the specified weight or measure is in accordance with the denominations authorized by the *Weights and Measures Act*, No. 32 of 1922, and unless the goods are made up in such quantities or measures as are proclaimed by regulation published in the *Government Gazette* in accordance with section 48 of the Act.

CLASSIFICATION OF CUSTOMS TARIFF.

I. Animals, agricultural, and pastoral products and foodstuffs.
II. Ales, spirits, wines, and beverages.
III. Tobacco and Manufactures thereof.
IV. Fibres, yarns, textiles, and apparel.
V. Metals, metal manufactures, machinery, and vehicles.
VI. Minerals, earthenware, and glassware.
VII. Oils, waxes, resin, paints, and varnishes.
VIII. Drugs, chemicals, and fertilizers.
IX. Leather, rubber, and manufactures thereof.
X. Wood, cane, and wicker, and manufactures thereof.
XI. Books, paper, and stationery.
XII. Jewellery, timepieces, fancy goods, and musical instruments.
XIII. Miscellaneous.
XIV. General.
XV. Materials for industrial purposes.

TARIFF OF CUSTOMS DUTIES.

Class and Description.		Minimum Duty.	Maximum Duty.
		£ s. d.	£ s. d.
Class I.—ANIMALS, AGRICULTURAL AND PASTORAL PRODUCTS AND FOODSTUFFS.			
1. Animals, living—			
(*a*) Cattle for slaughter	each	1 10 0	1 10 0
(*b*) Sheep for slaughter	each	0 5 0	0 5 0
(*c*) Mules and geldings	each	1 0 0	1 0 0
(*d*) Bred in South Africa imported overland, not being for slaughter	—	Free	Free
(*e*) Other	—	Free	Free
2. (*a*) Baking powder	per lb. or *ad valorem* whichever	0 0 4 or 30 % duty shall be	0 0 4 or 30 % the greater.
(*b*) Yeast	per lb.	0 0 2	0 0 3
3. Biscuits, bread, cakes, puddings, and pastry	*ad valorem*	25 %	25 %
4. Bones, feathers, ivory, hoofs, horns, shells, skins, teeth, wool, and other parts of animals, fishes or reptiles, not being manufactured, polished or further prepared than dried or cleaned, but in their raw and unmanufactured state	—	Free	Free
5. Butter	per lb.	0 0 2	0 0 2½
6. Butterine and butter substitutes, margarine, ghee, compound lard, cottolene, nuttose, and similar substances for use as food or for cooking	per lb.	0 0 3½	0 0 4
7. Casein : in bulk	—	Free	Free
8. Cheese—			
(*a*) Made from milk or cream, from which no fat has been abstracted, and to which no animal or vegetable fat has been added	*ad valorem* or per lb. whichever	25 % or 0 0 3½ duty shall be	30 % or 0 0 4 the greater.
(*b*) Other	*ad valorem* and per lb.	25 % and in addition 0 0 6	25 % and in addition 0 0 6
9. Chicory root, raw or dried only	per lb.	0 0 2	0 0 2
10. Chicory and substitutes for coffee or chicory	per lb.	0 0 4	0 0 4
11. Chillies and turmeric—			
(*a*) Chillies, dried	per lb.	0 0 2	0 0 2
(*b*) Turmeric, ground	per lb.	0 0 2	0 0 2
(*c*) Turmeric, unground	—	Free	Free
12. Cocoa—			
(*a*) Beans, raw	—	Free	Free
(*b*) Nibs and shells	per lb.	0 0 1	0 0 1
(*c*) Mass, paste or slab, unsweetened; block chocolate, unsweetened; and cocoa butter	per lb.	0 0 2	0 0 2
(*d*) Other unsweetened; cocoa mixed with milk or other food substances, except sugar	per lb.	0 0 2½	0 0 2½
(*e*) Sweetened cocoa, block chocolate (couverture) sweetened for use in the confectionery manufacturing industry	per lb.	0 0 3	0 0 3
13. Coffee—			
(*a*) Raw	per lb.	0 0 0¾	0 0 0¾
(*b*) Roasted or ground	per lb.	0 0 2	0 0 2
(*c*) Mixed	per lb.	0 0 3	0 0 3
14. Confectionery—			
(*a*) Slab chocolate : plain, milk, nut or fruit	per lb. or *ad valorem* whichever	0 0 4 or 30 % duty shall be	0 0 4 or 30 % the greater.
(*b*) Plain or fancy of all kinds, compounded, made or preserved with sugar; sweetened cocoa or chocolate, n.e.e.; sweatmeats; crystallized fruits, candied or preserved ginger (not being for manufacturing purposes), and chow-chow; Christmas stockings, bon-bons, surprise packets, and crackers	per lb. or *ad valorem* whichever	0 0 3½ or 35 % duty shall be	0 0 3½ or 35 % the greater.
(Not including medicinal preparations properly classed as apothecary-ware.)			
(*c*) Ginger for manufacturing purposes, preserved in syrup or brine : in packages of not less than 100 lb. net weight	per lb.	0 0 1½	0 0 1½

TARIFF OF CUSTOMS DUTIES (*continued*).

340. *Canvas goods manufacturing industry:* Canvas in the piece, weighing less than 8 oz. per yard of 28½ in. in width; tent rings, brass eyelets, hooks and eyes, webbing and thread.

341. *Cattle foods:* Concentrates for cattle food manufactured in the Union.

342. *Confectionery and biscuit manufacturing industries:* Confectioners' requisites, imported in bulk, namely, golden syrup, cocoa mass paste or slab, desiccated unsweetened coconut, block chocolate, unsweetened, gelatine (animal or vegetable), raw gums, deodorized or hydrogenated refined vegetable fats, and cocoa butter.

343. *Dips, disinfectant and insecticide manufacturing industry:* Ferrous and zinc sulphates; linseed, castor and whale oil, fatty acids; turpentine, cresylic acid, green oil, vaporizing oil, verpine, red oil, pyrethrum powder, iodine and potassium iodide; methyl salicyl; carbolic and naphthalic acid, nitro benzol, crude pine oil and crude terebine oil.

344. *Electric batteries manufacturing industry:* Terminals, plugs and other metal parts, insulators, glass tubes, dolls, composition pitch, ceresin wax and exciter salts.

345. *Explosives manufacturing industry:* Magnesium sulphate and magnesium carbonate in bulk; paraffin wax, stearine wax and stearine grease, collodion cotton and amatol; distilled glycerine in bulk.

CLASS XV.—MATERIALS FOR INDUSTRIAL PURPOSES (*continued*).

346. *Furniture-making industry :* Hinges, locks and keys, escutcheons, handles, castors, webbing, stubs and binding, gimps, cords and similar edgings, metal parts of blind rollers, twisted seagrass, and haircloth.

347. *Hat and cap manufacturing industry :* Raw felt, straw plaits, inside bands, linings of any material cut to shape, black padding and cap peaks cut to shape.

348. *Leather work, including the manufacture of bags, trunks, leggings, belts, straps, harness, saddlery :* Hand tools for bridle-makers, saddlers, harnessmakers and bagmakers, solution, fibreboard, hempite and similar compositions, metal and other frames, wooden hoops, locks, clips, studs, handles, swivels, caps, corners, hat-box cones, eyelets and hooks, springs, buckles, rings and other metal fittings, webs and webbing, seat linen, painted canvas, painted hessian, willesden green cloth and stiffening paper, saddle serge, saddle felt, linen thread, linings for suit cases, bags, trunks and other bagware, saddle nails, bridle rosettes of metal.

349. *Metallization processes and micanite manufacture :—*
   (*a*) Wire of all kinds, and metals in powder form for metallization processes.
   (*b*) Insulating varnish for micanite manufacture.

350. *Mining industry :—*
   (1) Eucalyptus, pine and other oils for use in connexion with the extraction of gold and other minerals by the flotation process.
   (2) Sodium sulphide for use in the concentration of ore by the flotation process.
   (3) Corduroy for use as battery cloth.

351. *Motor-fuel manufacturing industry :* Substances to be used as denaturants ; motor spirit for mixing with locally produced alcohol for the purpose of producing power alcohol.

352. *Oil-expressing industry :* Oil seeds and nuts, edible and non-edible, in bulk.

353. *Paints, varnish, polish, and putty manufacturing industries :* Materials in bulk, for the manufacture of paints, varnish, and polish and putty for resale, namely : leads, white and red, dry or ground in oil, and lithopone, linseed oil, boiled or raw, linsidol and similar substitutes for linseed oil, turpentine (natural or synthetic), acetic acid, amber oil, amyl acetate, waxes for polish-making, and sulphate of iron for colouring distempers.

354. *Papermaking industry :* Resin size, in bulk.

355. *Pipe (tobacco) making industry :* Stems (other than wooden), bone screws, clay and asbestos pipe cups, disc rasps and files, felt bobs and mops for polishing, erinoid rods, meerschaum blocks, mouthpieces of vulcanite, amber, amberoid, erinoid, celluloid, bakelite, and horn, clay linings and cups, shellac, block vulcanite, hinge tops.

356. *Printing, lithographic, bookbinding, ink manufacturing and cardboard box-making industries :—*
   (1) Stamping colours and printers' bronze powder ; lithographic offset powder ; gold, silver, bronze, and aluminium leaf.
   (2) Process block makers' requisites, namely : nitrate of silver, collodion, iodizer, fish glue, dragons blood, glacial acetic acid, biphosphate of ammonia, glass screens, plate and photographic paper ; varnish, including litho varnish, glass marbles, pumice blocks, snakestone blocks, stereo blotting-paper, stereo backing and graining grit.
   (3) Canvas in white and colours, American cloth, webbing, parchment, leather, imitation leather, corduroy, skins, vellum, binders' paper, marble paper, thread, tape, and pulpboard.
   (4) Wallpaper or other fancy paper in rolls, or in the flat not less than 16 in. by 15 in., and gummed tape, lace paper and lace strips, greaseproof or otherwise, for box making ; and metal eyelets, parts and edging, and corrugated lined board.
   (5) Gum for envelopes, and gummed paper.
   (6) Sulphite papers, for printing purposes only.
   (7) Cloth, for the manufacture of heliographic paper.
   (8) Gallic acid, tannic acid, sulphate of iron, for the manufacture of inks.

357. *Rope, twine, and cordage manufacturing industry :* Batching oil, and ingredients for the same ; and lubricants used in the manufacture of steel wire ropes, in bulk.

358. *Rubber manufacturing industry :* For the manufacture of rubber and rubber goods :—
   (*a*) Pigments, filling agents and vulcanizing accelerators, viz., zinc oxide (zinc white), zinc sulphide, zinc sulphate, antimony sulphide (yellow and red), alumina, magnesium carbonate, calcined magnesia, lithopone (mixture of zinc sulphide and barium sulphate or of zinc white and barium sulphate), vegetable black, carbon black, prussian blue, white and red lead, ebonite powder and emarex (natural pitch) ; in bulk.
   (*b*) Rubber substitutes, viz., vulcanized vegetable oils ; in bulk.
   (*c*) Rubber compounding oils, viz., aniline oil, rosin oil, and vaseline ; in bulk.
   (*d*) Rubber solvents, viz., benzine (benzol), coal-tar naphtha, westrosol, westron, carbon disulphide ; in bulk.
   (*e*) Vulcanizing agents, viz., sulphur chloride, in jars of not less than 1 imperial gallon.
   (*f*) Canvas in the piece and mercury sheeting.
   (*g*) Yarns, ammonia, and linseed oil (boiled).

359. *Shirt, collar and pyjama suit manufacturing industry :* Piece-goods of cotton or wool or mixtures thereof, buttons, woven labels and tabs, and pyjama girdles : provided they are imported direct by a manufacturer, who must be licensed under the Factory Act and employ not less than ten operatives.

360. *Soap, candle, and grease making industry :* Soya bean oil, citronella oil, mirbane oil, castor oil, raw linseed oil, and crude mineral oil ; paraffin wax, stearine wax and stearine grease.

361. *Steelware manufacturing industry :* Eyelets, rims and rings for pressed steelware ; rough steel tubing for petrol and other fillers.

362. *Textile industry :—*
   (1) Yarns other than woollen, for use in the manufacture of suitings, coatings and other dress material, and of blankets and sheetings, and for machine-knitted goods.
   (2) Oils for lubricating wool in the process of spinning and weaving by manufacturers of woven goods.
   (3) Acetic and formic acid.
   (4) Woven labels and tabs.

363. *Tanning industry :* Substances for preparing or bating hides and skins, and for tanning and finishing leather ; including formic acid, acetic acid, hyposulphite of soda, and tanners' white soap.

364. *Tin printing industry :* Stoving varnishes and lacquers, in bulk.

365. *Waterproof clothing manufactures :* Rubber-proofed material ; in the piece, made of cotton, hair, silk or wool, or mixtures thereof, and coal-tar naphtha, woven labels and tabs.

CLASS XV.—MATERIALS FOR INDUSTRIAL PURPOSES (*continued*).

366. *Whaling industry* :—
(1) Gunpowder and time fuses.
(2) Harpoons, whaling guns and parts thereof, manilla and hemp whale lines over 3½ in. in circumference.
(3) Drums for the export of whale oil.

367. *Windmill manufacturing industry* : Brass tubes (rough drawn).

368. *Wine, brandy and spirit industry* :—
(1) Matured second-hand wine and brandy casks of a capacity of not more than 65 liquid gallons, for maturing spirits distilled under section *six* of Act No. 5 of 1924.
(2) Matured wine and brandy casks for use as containers of South African wine for export.
(3) Steel drums for use as containers of South African spirits for export.

369. Wire for the manufacture of wire-netting.

370. *Woolwashing* : Soap and like substances.

371. *Materials for general industrial purposes* :—
(1) Colour preparations, spiritous or non-spiritous, and glazes; used in the manufacture or preparation of articles for sale.
(2) Oils, in bulk: palm, palm kernel, cocoanut, cotton seed, mafurra, resin, whale and sea elephant.
(3) Oxides, in bulk, namely: cobalt, copper, iron, tin, and zinc; and pigments (dry).
(4) Solvent naphtha, sealtite and similar fluxes, rubber rings and string solder, for use by manufacturers in the sealing of containers.
(5) Molasses : in bulk.
(6) Resin, including artificial resin, dry gums, dry shellac : in bulk.
(7) Paraffin wax : in bulk.

372. *Fish canning industry* : Wood linings for tins, cut to shape.

373. *Iron and steel and engineering industries* : Casehardening powders and compounds; sand reviving compo; plugs used as gauges for grooving and cutting rolls for the rolling of iron and steel; bricks for blast-furnace linings.

374. *Plywood manufacturing industry* : Gummed veneer tape.

375. *Road-making preparations* : Crude mineral oil for the manufacture of preparations for road-making.

GENERAL NOTE.

The headings of the respective Classes in this Schedule are used only for convenience of classification, and shall not in any way affect the interpretation of the Tariff.

"N.e.e." means "not elsewhere enumerated."

"Proof" shall mean the strength of proof as ascertained by Sikes' hydrometer.

"Proof spirits" shall mean spirits which, at a temperature of 51° Fahrenheit, weigh twelve-thirteenths part of an equal measure of distilled water.

The term "in bulk" when it appears in the Tariff means—
(*a*) goods loose without packing, or loose in barrels, casks or any other single outside package : or
(*b*) that the net contents of any immediate container of goods weigh not less than 10 lb. or measure not less than 1 imperial gallon.

"Piece-goods" shall not include material which is defined by selvedge or by pattern for cutting up into separate articles.

24 reputed half-pints, 12 reputed pints, 6 reputed quarts, and 4 reputed imperial quarts to be deemed to be not less than 1 gallon.

Tins, jars or other receptacles of reputed weight to be deemed to be not less than such weight.

Reputed 12-oz., 14-oz. and 16-oz. packets of candles to be deemed to be of those weights respectively.

Cement in packages of not less than 350 lb. and not more than 400 lb. to be deemed 400 lb.

Packages of flour or wheaten meal containing not less than 90 lb. and not more than 100 lb. to be deemed to be 100 lb., and packages containing more than 180 lb. and not more than 200 lb. to be deemed to be 200 lb.

Oils and motor spirits in ordinary reputed two 5 American gallon or ten 1 American gallon tins to be deemed to be not less than 8½ imperial gallons, and two 4 reputed gallon tins to be deemed to be not less than 8 imperial gallons.

Goods mixed or made up of more than one article liable to duty under any of the Classes of this Schedule and not chemically forming another distinct substances, are chargeable with the full duty payable on the article charged with the highest rate of duty and as if such article formed the whole composition.

A complete article imported in an unassembled condition is liable to the rate of duty which would be applicable to that article if imported in a fully set-up condition, notwithstanding that the constituent parts are packed separately and are provided for elsewhere in the Tariff.

SECOND SCHEDULE.

PREFERENTIAL REBATES OF DUTY.

PART I.

To Products and Manufactures of the United Kingdom.

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
		£ s. d.	£ s. d.
	Foodstuffs—		
19 (*e*)	Fish : tinned (not specially provided for).....	0 0 1½ per lb.	0 0 0½ per lb.
	Textiles—		
70	Hosiery, namely : socks and stockings	15 % *ad valorem*	5 % *ad valorem*
71	Laces, lace curtaining and flouncing, and embroidery : in the piece or in the form of insertions or medallions	20 % *ad valorem*	5 % *ad valorem*

PREFERENTIAL REBATES OF DUTY.—PART I (*continued*).

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
		£ s. d.	£ s. d.
	Textiles (*continued*)—		
76 (*a*) (i)	*Piece-goods*, not being blanketing or kaffir sheeting— Cotton (that is, piece-goods containing 50 per cent. or more of cotton), the free-on-board price of which per yard does not exceed 1s. 3d.....	12½ % *ad valorem*	5 % *ad valorem*
	NOTE.—In the case of piece-goods exceeding 30 in. in width, "yard" shall mean 36 in. by 30 in. in width, and the price shall be calculated proportionately to the width.		
	Metals and machinery—		
Ex 86	Motor cycles and side-cars, including spare parts and accessories, but not including electric lamp bulbs, tyres and tubes, when imported separately.....	20 % *ad valorem*	5 % *ad valorem*
89 (*a*)	Buckets, skips, trucks, and tubs, wheeled or otherwise, for hauling on rails or wires; and metal shafts sets.....	5 % *ad valorem*	The whole duty.
(*b*)	Rails not exceeding 30 lb. per running foot.....	5 % *ad valorem*	The whole duty.
99	Cutlery, not plated.....	20 % *ad valorem*	5 % *ad valorem*
102	Enamelware and hollowware—		
(*a*)	Enamelled lamp shades and reflectors.....	5 % *ad valorem* plus a suspended duty of 20 % *ad valorem*	5 % *ad valorem*
(*b*)	Enamelware, n.e.e.....	20 % *ad valorem* plus a suspended duty of 10 % *ad valorem*	5 % *ad valorem*
(*c*)	Hollowware, n.e.e.....	20 % *ad valorem*	5 % *ad valorem*
115	Lamp bulbs: electric—		
(*a*)	Projector type.....	5 %	The whole duty.
(*b*)	Radiator type.....	20 %	5 %
(*c*)	Motor and motor-cycle head-lights.....	0 10 0 per 100	The whole duty.
(*d*)	Motor and motor-cycle side-, tail, and dash-lights.....	0 5 0 per 100	The whole duty.
(*e*)	Flashlights.....	0 2 6 per 100	The whole duty.
(*f*)	Carbon filament.....	0 5 0 per 100	The whole duty.
(*g*)	Vacuum type, n.e.e.— Not exceeding 60 watts....	0 5 0 per 100	The whole duty.
	Exceeding 60 watts.....	0 10 0 per 100	The whole duty.
(*h*)	Gasfilled type, n.e.e.— Not exceeding 100 watts..	0 10 0 per 100	The whole duty.
	Exceeding 100 watts.....	1 0 0 per 100	The whole duty.
116	Lamps and lampware—		
(*e*)	Lamp shades and reflectors, of glass or metal, for gas and electric lighting, n.e.e.....	5 % *ad valorem*	The whole duty.
118	Machinery, apparatus, appliances, and implements (not specially provided for, and not including material, domestic machines or vehicles)—		
(*c*)	For mining purposes.....	3 % *ad valorem*	The whole duty.
(*d*)	Rock drill spares, and metal liners for tube mills.....	20 % *ad valorem*	3 % *ad valorem*
(*e*)	Plates and frames for sugar filter-presses.....	20 % *ad valorem*	3 % *ad valorem*
(*f*)	For manufacturing and industrial purposes [other than agricultural and than those falling under (*d*) and (*e*) above], including machinery for power laundries, but not fixed plant and machinery for factory installation, and structural steelwork for staging and platforms.....	3 % *ad valorem*	The whole duty.

PREFERENTIAL REBATES OF DUTY.—PART I (*continued*).

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
	Metals and machinery (*continued*)—	£ s. d.	£ s. d.
119 (*a*)	Machinery, apparatus, appliances, implements, and electrical material used in connexion therewith for the generation, storage, transmission, distribution of, and lighting by, gas or electric power, and machinery for the conversion and transformation of electric power, but not including acetylene lamps, hand and portable lamps, lamp shades and reflectors, batteries and bulbs elsewhere provided for, electric fans, and parts or accessories of motor vehicles or cycles.....	5 % *ad valorem*	The whole duty.
(*b*)	Batteries, electrical : wet or dry, primary or secondary, including accumulators, except those of which each cell or unit is of a capacity greater than 150 amperes	15 % *ad valorem* plus a suspended duty of 15 % *ad valorem*	5 % *ad valorem*
122	Iron and steel—		
(*a*)	In blocks, ingots, pigs, billets, slabs, blooms, and like crude manufactures; and scrap.....	3 % *ad valorem*	The whole duty.
(*b*)	Plates and sheets : plain, corrugated or galvanized, including tinplate, but not including lacquered, enamelled, varnished, printed, lithographed, or embossed.....		
(*c*)	Angle, bar, channel, hoop, rod, H, T, and similar iron or steel, not perforated or put together or worked up in any way, and not specially provided for, and baling clips....		
(*d*)	Drill steel.....		
(*e*)	Tool steel.....		
128	Meters, electricity—		
(*a*)	Of less than 50 amperes.....	0 2 6 each	The whole duty.
(*b*)	Of 50 amperes and not exceeding 100 amperes.....	0 5 0 each	
(*c*)	Exceeding 100 amperes.....	0 10 0 each	
134	Pipes, piping, tubes, and fittings, of metal : for gas, steam, drainage, sewerage, irrigation, water supply and water pumping; not including grids, manhole covers and fittings, and surface boxes—		
(*a*)	Wrought-iron or steel pipes and tubes, not riveted, except downpipes and guttering.....	0 1 0 per 100 lb.	The whole duty.
(*b*)	Cast-iron pipes and tubes, except downpipes and guttering	0 0 8 per 100 lb.	The whole duty.
(*d*)	Downpiping and guttering and fittings therefor, and riveted wrought-iron or steel pipes and tubes.....	20 % *ad valorem*	5 % *ad valorem*
(*e*)	Cocks and taps, and meters and pipe fittings, n.e.e.....	5 % *ad valorem*	The whole duty.
(*g*)	Cisterns.....	20 % *ad valorem*	5 % *ad valorem*
(*h*)	Water meters for house connexions, not exceeding 1-in. piping.....	0 3 0 each	The whole duty.
143 (*b*)	Electrical cooking and heating appliances (including kettles and irons) : not being machinery elsewhere provided for.....	20 % *ad valorem*	5 % *ad valorem*
146	Mechanics' tools : being tools ordinarily used by mechanics or artisans, and not being agricultural implements or machine tools.....	3 % *ad valorem*	The whole duty.
153 (*b*)	Wire, except electric wire, millinery and brass picture wire, and wire made of precious metal.....	3 % *ad valorem*	The whole duty.
171	Glass—		
(*b*)	Polished plate—		
	(i) Exceeding 7 sq. ft. in measurement.....	0 0 7 per sq. ft.	0 0 1 per sq. ft.
	(ii) Not exceeding 7 sq. ft.....	0 0 5 per sq. ft.	0 0 1 per sq. ft.
(*c*)	Sheet (plain, clear)—		
	(i) Exceeding 16 oz. per sq. ft...	0 7 0 per 100 sq. ft.	0 1 0 per 100 sq. ft.
	(ii) Not exceeding 16 oz. per sq. ft.	0 5 0 per 100 sq. ft.	0 1 0 per 100 sq. ft.

PREFERENTIAL REBATES OF DUTY.—PART I (*continued*).

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
192	White lead—	£ s. d.	£ s. d.
(*a*)	Dry	0 7 0 per 100 lb.	0 1 0 per 100 lb.
(*b*)	Ground in oil—		
	(i) In packages containing 50 lb. weight or over	0 10 0 per 100 lb.	0 1 0 per 100 lb.
	(ii) In packages containing less than 50 lb. weight	0 11 0 per 100 lb.	0 1 0 per 100 lb.
260	Rubber manufactures—		
	Rubber pneumatic tyres and tubes—		
(*a*)	Tyres, including the weight of the immediate wrapper	0 1 0 per lb.	0 0 2 per lb.
(*b*)	Tubes for motor vehicles other than motor cycles	0 0 7½ per lb.	0 0 1½ per lb.
(*c*)	Tubes for motor cycles and cycles	0 1 0 per lb.	0 0 2 per lb.
261	Rubber tyres, solid : complete or in lengths or in the piece	0 0 3 per lb.	0 0 1 per lb.
	Paper—		
295 (*c*)	News print, in reels or in the flat	5 % *ad valorem*	The whole duty.

PART II.

To Products and Manufactures of Canada.

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
15 (*a*)	Wheat—	£ s. d.	£ s. d.
	(i) In the grain	0 1 7 per 100 lb.	0 0 2 per 100 lb.
	(ii) Ground or otherwise prepared	0 3 8 per 100 lb.	0 0 4 per 100 lb.
19 (*e*)	Fish, tinned (not specially provided for)	0 0 1½ per lb.	0 0 0½ per lb.
70	Hosiery, namely : socks and stockings	15 % *ad valorem*	5 % *ad valorem*
81	Twine—		
	(*a*) Seaming and binding, and harvest yarn	5 % *ad valorem*	The whole duty.
	Iron and steel—		
134	Pipes, piping, tubes, and fittings of metal : for gas, steam, drainage, sewerage, irrigation, water supply and water pumping ; not including grids, manhole covers and fittings, and surface boxes—		
(*a*)	Wrought-iron or steel pipes and tubes, not riveted, except downpipes and guttering	0 1 0 per 100 lb.	The whole duty.
(*b*)	Cast-iron pipes and tubes, except downpipes and guttering	0 0 8 per 100 lb.	The whole duty.
(*d*)	Downpiping and guttering and fittings therefor, and riveted wrought-iron or steel pipes and tubes	20 % *ad valorem*	5 % *ad valorem*
(*e*)	Cocks and taps, and meters and pipe fittings, n.e.e.	5 % *ad valorem*	The whole duty.
(*g*)	Cisterns	20 % *ad valorem*	5 % *ad valorem*
(*h*)	Water meters for house connexions, not exceeding 1-in. piping	0 3 0 each	The whole duty.
143 (*b*)	Electrical cooking and heating appliances (including kettles and irons) : not being machinery elsewhere provided for	20 % *ad valorem*	5 % *ad valorem*
146	Mechanics' tools : being tools ordinarily used by mechanics or artisans, and not being agricultural implements or machine tools	3 % *ad valorem*	The whole duty.
192	White lead—		
(*a*)	Dry	0 7 0 per 100 lb.	0 1 0 per 100 lb.
(*b*)	Ground in oil—		
	(i) In packages containing 50 lb. weight or over	0 10 0 per 100 lb.	0 1 0 per 100 lb.
	(ii) In packages containing less than 50 lb. weight	0 11 0 per 100 lb.	0 1 0 per 100 lb.
260	Rubber pneumatic tyres and tubes—		
(*a*)	Tyres, including the weight of the immediate wrapper	0 1 0 per lb.	0 0 2 per lb.
(*b*)	Tubes for motor vehicles other than motor cycles	0 0 7½ per lb.	0 0 1½ per lb.
(*c*)	Tubes for motor cycles and cycles	0 1 0 per lb.	0 0 2 per lb.
261	Rubber tyres, solid : complete or in lengths or in the piece	0 0 3 per lb.	0 0 1 per lb.
279	Wood : unmanufactured	3 % *ad valorem*	The whole duty.
295	News print, in reels or in the flat	5 % *ad valorem*	The whole duty.

PART III.

To Products and Manufactures of Australia.

Tariff Item.	Article.	Maximum Duty.	Amount of Rebate.
		£ s. d.	£ s. d.
5	Butter	0 0 2¼ per lb.	0 0 0¼ per lb.
15 (*a*)	Wheat—		
	(i) In the grain	0 1 7 per 100 lb.	0 0 2 per 100 lb.
	(ii) Ground or otherwise prepared.	0 3 8 per 100 lb.	0 0 4 per 100 lb.
70	Hosiery, namely : socks and stockings	15 % *ad valorem*	5 % *ad valorem*
279	Wood : unmanufactured	3 % *ad valorem*	The whole duty.

(*b*) In the form of cigarettes, per pound weight	0 6	Nil
2. Tobacco manufactured in a country in South Africa the Government whereof has entered into a Customs agreement with the Government of the Union on importation into the Union—		
(*a*) Ready for use in the making of cigarettes, per pound weight	Nil	0 6
(*b*) In the form of cigarettes, per pound weight	Nil	0 6

§ 3. Trade Commissioner Services.

1. **Trade Commissioner of the Union in London.**—(i) *General.*—Until within a short period of the constitution of the Union the Cape was the only South African Government to have its own special trade representative in the United Kingdom. Just before the formation of the Union, however, the Natal Government appointed an officer under the title of Commercial Agent and both the Transvaal and Orange River Colony had attached to the offices of their Agents General in London officers specially charged with the supervision of trade and commercial matters. On the establishment of Union in 1910, these offices were merged in one and placed under the control of an officer styled the Trade Commissioner for the Union of South Africa, who with his staff formed an integral portion of the High Commissioner's Office in London, although housed in separate premises at 90 Cannon Street, E.C. This arrangement continued until the removal of the High Commissioner's Office to the new premises in Trafalgar Square, when opportunity was taken to house all sections of the High Commissioner's staff under one roof. The present Trade Commissioner is Mr. J. H. Dimond.

The work of the Trade Commissioner's Office is limited to the export trade of South Africa, and until the appointment of the Commissioner of Commerce (see paragraph 2), embraced all exports to the United Kingdom and to the Continents of Europe and America.

(ii) *Intelligence Service.*—The Union Department of Agriculture is advised by cable weekly of the prices obtaining and of the general trend of markets, and this information

forms a useful guide to the producer and shipper. Advice is also sent where the Trade Commissioner in his investigations discovers the likelihood of any developments affecting producers' interests. Sales of wool, mohair, feathers, hides, etc., are attended and closely watched, and constant visits are paid to the Baltic Exchange, Mark Lane, Mincing Lane, and other marketing centres. The office of the Trade Commissioner is called upon to reply to numerous trade inquiries, and considerable advantage is taken by the commercial public of the facilities the office affords in this connection. Many of these inquiries are made personally, and the South African merchants, producers, and shippers are making increasing use of the Trade Commissioner's services in prosecuting their inquiries and promoting their business in Great Britain. A useful function is performed in bringing producers and consumers into touch with each other and in giving business introductions where such are necessary.

(iii) *Inspection of Produce.*—The duties which fall under the heading of inspection are only slightly less important. Consignments of Union produce are examined and reports made on their condition and quality. Advice is given where goods fall short of market requirements and directions indicated in which alterations in packing, quality, or grading are desirable. Every shipment of fruit is inspected and faulty or damaged packs noted and reported on. This is a feature of the work which is of great benefit not only to growers but to the receivers who are only too eager to invite official inspection when cases of wastage arise.

(iv) *Propaganda.*—Trade propaganda has chiefly taken the form of exhibitions organized and run by the Trade Commissioner. In recent years these have been conducted on a scale hitherto not attempted by South Africa and they have attracted considerable attention both in England and on the Continent. In other less direct and less obvious ways the Trade Commissioner is called upon to take steps to widen existing markets and find new markets for South African products. The Trade Commissioner represents the High Commissioner on various Boards and Committees—e.g. the Empire Cotton Growing Corporation, the South African Committee of the Imperial Institute, Refrigeration Association, Poultry Association, etc. He is also a member of the South African Section of the London Chamber of Commerce and generally identifies himself with all trade movements in the United Kingdom which have a bearing on the trade interests of the Union.

2. **Commissioner of Commerce for the Union (Milan).**—The Office of the Commissioner for the Union on the Continent of Europe, with headquarters in Rotterdam, was created at the beginning of 1922, and Mr. Karl A. Spilhaus was appointed the first Commissioner. In September, 1924, he was succeeded by Mr. C. I. Pienaar, while in May, 1925, the headquarters were removed from Rotterdam to Milan.

The offices of the Commissioner for Commerce are now located at Milano (11), Via Manzoni 5, Italy.

A branch office is maintained at Hamburg, whilst honorary Trade Commissioners for the Union have been appointed at Helsingfors, Berlin, Genoa, Antwerp, Oslo, Paris, and Rotterdam.

3. **Trade Commissioner for the Union in East Africa.**—This office was established in October, 1923, Colonel Beresford Turner, C.M.G., D.S.O., being appointed to the post, with headquarters at Nairobi.

4. **Trade Commissioner for the Union in America.**—This office, with headquarters in New York, was created in the middle of 1925, and Mr. Eric Louw was appointed the first Commissioner.

5. **H.M. Trade Commissioner in South Africa.**—The post of His Majesty's Trade Commissioner was created in 1908 as a result of the Imperial Conference of 1907. An officer was appointed for each of the four larger Dominions by the Board of Trade to co-operate with their Commercial Intelligence Branch in fostering British trade; undertaking work similar to the commercial side of the activities of the British Consular Service in foreign countries. The scheme was in the nature of an experiment, and the organization proportionately small. The four Trade Commissioners were respectively instructed to open offices at Cape Town, Melbourne, Montreal, and Wellington. In 1918 steps were taken to carry out an important scheme of development as recommended by the Dominions Royal Commission, and it was decided to appoint Trade Commissioners in Calcutta and Bombay, the West Indies (Port of Spain, Trinidad), the East Indies (Singapore), as well as additional Trade Commissioners in the Dominions. In South Africa the Senior Trade Commissioner is stationed at Johannesburg, the Cape Town office remaining in charge of the additional Trade Commissioner. In Canada offices have been opened in Toronto, Winnipeg, and Vancouver, and for Australia the Second Trade Commissioner is located in Sydney. In addition, Imperial Trade Correspondents in the other chief commercial centres of these Dominions co-operate with the Trade Commissioners. In South Africa there are Imperial Trade Correspondents at Durban, Port Elizabeth, Bulawayo, Maseru (Basutoland), and Serowe (Bechuanaland), while similar posts have been created in Mauritius and St. Helena. There is also a Trade Commissioner at Nairobi, Kenya Colony.

The Commercial Intelligence Branch of the Board of Trade having been made with the Exhibitions Branch into a Department (the first fruits of which was the inauguration of an annual British Trade Fair) was in 1917 reconstituted as the Department of Overseas Trade, with a Parliamentary Under-Secretary, linking it alike with the Board of Trade and the Foreign Office, the whole commercial side of the Board of Trade being simultaneously reorganized in order to deal more effectively with British industry from the point of view of production, research, publicity, development, and intelligence.

A further development of the Trade Commissioners Service which is of particular interest and historical importance is its new Imperial aspect resulting from the decision of the Imperial War Conference. The services of H.M. Trade Commissioners in various parts of the British Empire were offered to the Government of India and to the Dominions in order to supplement an oversea intelligence organization of their own. This offer was accepted by the Union of South Africa, by India, and by New Zealand.

The primary object of the Trade Commissioner is to direct importers in South Africa, whether of finished manufactures, machinery for local production, or raw materials, to British sources of supply, and generally to work for the promotion of trade within the Empire. This obviously entails a close study of local requirements and of foreign competition in this market, as well as a knowledge of the capabilities of British producers and manufacturers oversea. It is also clear that there is almost unlimited scope for work in this field. The work is complementary and parallel to that of the Union Trade Commissioner in London, with whom the Department of Overseas Trade in London and the Trade Commissioners in South Africa are in constant touch.

His Majesty's Senior Trade Commissioner in South Africa is Mr. N. Emslie.

6. **American Trade Commissioner in South Africa.**—Since the establishment in 1912 of the United States Department of Commerce as a separate department, there has been a steady growth in the Bureau of Foreign and Domestic Commerce, in which are centred the trade promotion activities of the American Government. This Bureau has grown from a comparatively small organization until now there are four regional, seventeen commodity, six technical, and three administrative divisions, with a staff of 621 in Washington alone. In addition, there are eleven district offices, located in the principal commercial centres of the United States, and thirty-four co-operative offices which are maintained by local chambers of commerce. In the foreign field the Department of Commerce maintains forty-one offices, including the Johannesburg office, which was opened in 1920. The present American Trade Commissioner in Johannesburg is Mr. Perry J. Stevenson. A corps of travelling experts, investigating market conditions in the trades in which they are qualified authorities, is another feature of the foreign staff. In addition to these resources, the Department has the active co-operation of about one thousand American diplomatic and Consular Officers, located in every part of the world.

The chief function of the Bureau of Foreign and Domestic Commerce is assistance to American commerce in its broadest sense. Information on general commercial conditions, as well as on various trades and industries, is made available to the business public through many channels, especially the publications of the Bureau, of which a weekly "Commerce Reports" is the most important. Accurate, up-to-date reports which can be of practical value to American manufacturers and exporters, are received in Washington by cable and mail, and are promptly disseminated. The Foreign service is also interested in aiding firms located in their territories to find markets in the United States, especially for raw materials. A large part of the overseas representatives' attention is devoted to assisting importers and others who are desirous of securing American agencies, or purchasing American products.

7. **Canadian Trade Commissioner in South Africa.**—The Canadian Trade Commissioner Service was established by Order-in-Council on the 21st November, 1891, and the first officer was appointed in 1894. Since then the Service has extended and at present Canadian Trade Commissioners to the number of twenty-eight are stationed in various parts of the world, including South Africa. These activities of the overseas Trade Commissioners are supplemented by the appointment by the Canadian Department of Trade and Commerce of persons resident in other countries as part-time commercial agents who are allowed a small salary for services rendered. In addition, arrangements were made by the Canadian Government with the British Government in 1912, whereby a large number of British Consuls were placed at the disposal of Canadians who may wish to consult them on trade matters.

The purpose of the Canadian Trade Commissioner Service is to promote the sale of Canadian products abroad and to provide Canadian manufacturers and exporters with information regarding trade conditions in countries where Canadian goods are likely to find a market. In addition to this direct work for Canadian export, overseas Canadian Trade Commissioners submit to headquarters data in reference to raw materials, etc., on behalf of the producers or manufacturers in any Dominion where they may be placed.

As there is no regular line of steamships between Canada and Africa, the Canadian Government has subsidized a steamship service between Canada and South Africa.

8. **Trade Commissioner for Madagascar.**—A Trade Commissioner for Madagascar has been appointed at Durban.

9. **General.**—In May, 1925, the control of the Trade Commissioner Service, which up to that date had been exercised by several Departments of State, was definitely vested in the Department of Mines and Industries, and the Service now forms a section of the Board of Trade and Industries.

§ 4. Imports and Exports.

1. **South African Oversea Trade, 1826 to 1909.**—The earliest statistics relating to the oversea trade of South Africa are those of the Cape of Good Hope, dating from 1826. From the year 1862 records of imports and exports through Durban are available, and from 1905 the figures relative to the trade with the Transvaal through Delagoa Bay become accessible, although the railway line from Lourenco Marques and the Transvaal was opened as early as 1893. Prior to the last mentioned date, the whole of the trade of the States now comprised within the Union was carried through Cape and Natal ports, but after the opening of the Delagoa Bay–Transvaal railway line an increasing volume of trade was carried along that route.

Summarized particulars of the South African overseas trade from 1826 to 1909 will be found in the sixth and previous issues of this *Year Book*.

2. **Imports and Exports from 1906.**—The total value of imports and exports in respect of the territories comprising the Union from 1906 to 1909, and in respect of the Union from 1910, is given in the subjoined tables (i) and (ii), together with the net consumption of merchandise from 1909, and the balance of trade for the period from 1906. Table (iii) shows the total value of imports and exports (excluding specie) from 1906, with the value per head of the mean population, and per head of the mean European population, and the proportion per cent. of exports to imports.

(i) TOTAL VALUE OF IMPORTS OF MERCHANDISE, GOVERNMENT STORES, AND SPECIE INTO THE UNION, AND RE-EXPORTS FROM 1906, AND NET CONSUMPTION OF MERCHANDISE FROM 1909.

3. **Imports into the Union.**—The following tables give particulars as to the value of various classes of articles, various articles in detail, and the total value of imports into the Union from the year 1910. Tables (i) and (ii) embrace imports of all articles of merchandise through all ports of entry into the Union (including the Portuguese port of Lourenco Marques), by sea or overland, and entered for immediate consumption, warehousing or direct removal overland to countries outside the Union. The value of removals from Southern and Northern Rhodesia under the Customs agreement is given in a separate column (as shown), which, from the year 1922, also includes South West Africa.

5. **Foreign Trade.**—The tables below give particulars as to the value of the trade carried on by the Union with certain British and other countries since 1910. Every endeavour is made in the case of imports to allocate each item to the actual country of origin, and not to the country where shipment was made. In the case of exports the country of final destination is given as far as can be ascertained up to the time of shipment. From the restoration of more or less normal relations up to 1922, the direction of trade, as far as imports were concerned, tended to revert to pre-war conditions, except in the case of Rhodesia and Kenya Colony, with which countries there was considerable trade expansion. Among non-British countries Germany ranked second. Among the new European States the most notable increases in imports occurred in the case of Czecho-Slovakia, chiefly in cyanide of sodium, beads, glassware, and fancy goods, and of Finland, chiefly in wood and paper. The outstanding feature of exports was the considerable increase in the trade with the Continent. Germany for the last two years has resumed her former position as South Africa's chief foreign customer, taking a large quantity of wool, maize, bark, and hides and skins, a portion of which is undoubtedly distributed to other European countries. Holland and France in particular, and Italy and Belgium to a less degree, showed increases. In the case of Holland this was due mainly to a large export of whale oil. Although the United Kingdom nominally receives from 60 to 70 per cent. of the exports, such a statement is somewhat misleading, as a very large proportion merely constitutes entrepôt trade, part of the cargo shipped in South Africa being conveyed direct to the Continent. The great bulk of the Union's gold export, though sold in London, went to the United States, and the same country was one of the best customers for diamonds.

6. **Analysis of Trade with other Countries.**—The following tables contain an analysis of the trade of the Union with those countries from which are derived the principal imports into the Union, and to which is exported the bulk of the products. The tables also show in the cases of contiguous countries the extent of the entrepôt trade. The first two columns in each table give average values for periods of years, and the last three columns give the annual values for the last three years for which complete figures are available. Each table gives for comparative purposes the total value of the import and export trade with the country concerned. It will be seen that in the cases of some countries the trade is limited either to imports or exports; but in the large majority of cases trade is reciprocal.

These tables have been framed specially as the result of a detailed analysis of the statistical records of the external trade of the Union from the year 1910; and it will be obvious that the information has been presented in a way designed to give ready reference to the principal features of the Union trade with the countries with which it is chiefly concerned. Items of minor value have not been included owing to limitations of space.

ANALYSIS OF TRADE BETWEEN THE UNION AND CERTAIN OTHER COUNTRIES FROM 1910.

§ 5. General Features of the External Trade of the Union.

1. **General Conditions of Trade.**—There was a considerable increase both in volume and recorded value of imports, and a slight increase in the recorded value, but a decrease in the volume of exports as compared with 1923.

Imports, at an average price of about 72 per cent. above those prevailing before the war, were of greater volume than in any year since 1911. The chief increases were due to railway

material, motor-cars, electrical goods, and oils. Large increases occurred in goods for the farming community, such as agricultural implements, machinery, fencing material, and fertilizers.

The recorded value of exports of gold, coal, tin, wool, mohair, hides, skins, and beef increased, but a fall of over £2,500,000 in the export value of maize took place. There was also a considerable decrease in the export of sugar, bark, asbestos, and copper.

2. **Vessels Entered at Union Ports.**—There was an increase during 1923 in the number and total tonnage of vessels entered at Union ports and in the tonnage of cargo shipped, but an increase in the tonnage of cargo landed. The chief decrease occurred in the tonnage of British vessels, but there were also decreases in the tonnage of German and Italian ships. The chief increases were of ships of Portuguese, Swedish, Dutch, and Finnish register.

NUMBER AND TONNAGE OF OVERSEA VESSELS ENTERED AT UNION HARBOURS (SHOWING NATIONALITIES) AND TONNAGE OF CARGO LANDED AND SHIPPED, 1923 AND 1924.

* Including bunker coal.

NOTE.—In 1913 the figures for the number and tonnage of vessels entered were :—British—number 1,179 ; tonnage, 4,238,805. German—number, 230 ; tonnage, 723,458. All Foreign—number, 428 ; tonnage 1,114,989. Four Japanese vessels entered, with a tonnage of 13,903 ; no cargo landed or shipped.

3. **Decreases in Imports of Various Food-stuffs.**—The following table showing the extent to which certain articles of food were imported during the years before the war

and in subsequent years, gives reason for assuming a corresponding increase in the production of such articles in the Union during the later years :—

IMPORTS OF VARIOUS ARTICLES OF FOOD FROM 1910.

(INCLUDING IMPORTS FOR GOVERNMENT AND IMPORTS FROM RHODESIA AND SOUTH-WEST AFRICA.)

Year.	Cheese.	Eggs.	Frozen Beef.	Frozen Mutton.	Sugar.	Jams.	Fish.	Butter.
	1,000 lb.	Value, £.	1,000 lb.	1,000 lb.	1,000 lb.	1,000 lb.	1,000 lb.	1,000 lb.
Average :								
1910–14.....	5,129	62,772	5,987	2,356	55,318	1,986	10,172	4,097

1924.....	607	4,913	12	52	1,078	341	14,247	2,707

4. **Exports of Staple Commodities in 1924.**—(i) *Coal.*—There was a small increase in the export of coal over 1923, the previous record. This was chiefly owing to the great increase in the demand of the Soudan, which among customers was fifth in order of magnitude. The coal bunkered at the ports also increased slightly. Of the total traffic Durban accounted for approximately 67 per cent., Cape Town 18½ per cent., and Lourenco Marques 13½ per cent.

(ii) *Diamonds.*—Although fewer diamonds were exported, the price per carat was higher than in 1923, and the decrease in the total value of exports was less than £74,000.

(iii) *Ostrich Feathers.*—There was a slight decrease in quantity, but a slight increase in the value of ostrich feathers exported in 1923.

(iv) *Mohair.*—There was a decrease in exports of mohair of over 1,000,000 lb, but an increase of the total value of nearly £200,000.

(v) *Hides and Skins.*—Exports of hides were 48 per cent. greater than in 1913, the previous record, and in value were £373,000 higher than in 1923. Although exports of skins decreased in volume, the total value increased owing to higher prices.

(vi) *Maize.*—The export of maize was the smallest since 1920, amounting to little over 70,000 tons. This was owing to the drought, which left little exportable surplus.

(vii) *Meats.*—The export of meats, amounting to 4,372 tons, was the largest since 1920 This was entirely due to the export of 4,296 tons of beef to Italy.

(viii) *Wool.*—There was an increase both in the quantity of wool exported and in the price realized, so that the total value of the export amounted to nearly £16,000,000 greater than in any year, except the boom years of 1919 and 1920.

5. **Principal Exports since 1909.**—The succeeding tables give comparisons in respect of some of the principal articles of South African produce, showing in each case the quantity exported, the recorded value, the value assessed at the 1909 price, the value assessed at the previous year's price, showing gain or loss, together with an index number calculated upon the average price for the years 1909 to 1913 (= 1000).

PRINCIPAL EXPORTS OF SOUTH AFRICAN PRODUCE EACH YEAR SINCE 1909—QUANTITY, VALUE ON DIFFERENT BASES, AND INDEX NUMBERS.

(Excluding Removals to Rhodesia and, from 1922, South-West Africa and, from 1916, Ships' Stores.)

6. **Variation of Export Values.**—The following tables show the variation of the values of exports, divided into four categories: (i) living animals, (ii) produce of the land, (iii) produce of the mines (excluding gold), and (iv) other articles. Table (v) is a summary of the preceding four. Table (vi) is similarly a summary of the first four tables with the addition of gold. In this table the exports of gold during the period 1914 to 1919 have been re-arranged in proportion to the output. As the gold during the greater part of this period was sold to the Bank of England as soon as it was lodged with South African banks, this re-arrangement gives a closer approximation to the Union's purchasing power, as far as visible exports are concerned, for individual years than the recorded export figures. The second column in the tables shows the recorded values of exports, the third the values at the average (1909–13) prices. The two last columns show the index numbers (1) of the value of exports, and (2) of the export values. About 98 per cent. of the exports are shown by quantities as well as values in the annual statements of the Customs Department. In the case of the remaining 2 per cent., where values only are recorded, changes of value have been applied proportional to the other articles in their appropriate class.

VARIATIONS IN VOLUME AND VALUE OF EXPORTS (S.A. PRODUCE) FROM 1909.

(Including Ships' Stores but excluding Removals to Rhodesia, and from 1922, South West Africa.)

Year.	Recorded Value.	Value at 1909–13 Average.	Effect of Change of Price.		Index No. of Volume of Export (Average 1909–13 = 1000).	Index No. of Export Values (Average 1909–13 = 1000).

7. **Variation of Import Values.**—The following tables show the variation of the values of imports divided into three categories: (i) Food and Drink, (ii) Raw Materials, and (iii) Manufactured Articles. Table (iv) is a summary of the preceding three. As far as possible a similar method of calculation was pursued as in the case of exports. (See paragraph 6.) As, however, only one-third of the imported articles have quantities as well as values recorded, investigation of other sources of information was necessary. Details of the exports from the United Kingdom to South Africa in the former's trade returns, which are more detailed as to quantities, were extracted and collated with the variations of wholesale prices. Assistance was given by the British Board of Trade. The final results, tabulated below, though not purporting to be absolutely correct, may be taken as substantially accurate. Confirmation of the limits between which the margin of error might lie is afforded by a comparison of the weight of oversea cargo landed and the index of volume arrived at from the above calculation. The results are indicated hereunder. In the former case the year 1913 (the first for which details are available) is taken as the base equal to 1111, the index of volume for that year [see table (iv) hereunder].

	Oversea Cargo Landed.	Index of Volume of Imports.		Oversea Cargo Landed.	Index of Volume of Imports.
1913	1111	 1111	1919	555	 570
1914	906	 927	1920	964	 895
1915	740	 791	1921	612	 618
1916	782	 880	1922	682	 712
1917	628	 663	1923	923	 851
1918	520	 690	1924	1101	 1041

In the first place it must be remembered that during the war, owing to lack of shipping accommodation, there was every incentive to economy of space, with a tendency in consequence to import goods of less bulk. As a result, it was to be expected that throughout the war period the figures in the second column would be somewhat higher than those in the first, and that that difference would tend to disappear when more normal conditions supervened. The year 1918 shows a very large deviation, but that is chiefly accounted for by the quantities of soft goods imported in that year and the considerable falling off in raw materials, machinery, motor-cars, etc. In the years 1920 and 1923, the only ones in which the figure in the second column is lower than the first, a completely different state of things was in evidence, large quantities of grain and flour and raw materials, especially wood, the bulkiest of all, having been imported. It is seen that in the circumstances the figures do in fact show a remarkable degree of correspondence.

11. **Insurance and Freight Charges.**—From the beginning of 1922 calculations were made of the cost of insurance and freight on the importation of merchandise into the Union. The totals for 1922, 1923, and 1924 under this head were £4,043,999, £4,427,549, and £5,128,346 respectively. Applying the same percentage to the year 1921, an approximate figure of £4,270,000 is obtained for that year.

§ 6. Excise Duties.

Excise Duties Imposed in the Union.—Particulars of excise legislation both before and since the establishment of the Union will be found in previous issues of the *Official Year Book*. Details as to revenue collections of excise are given in Chapter XXII.

(i) *Spirits and Beer.*—The following table shows the duties and the rebates allowed under Act No. 35 of 1921.

TARIFF OF EXCISE DUTY ON SPIRITS AND BEERS MANUFACTURED IN THE UNION (ACT No. 35 OF 1921).

ARTICLE.

Spirits.	Rate of Duty.
	£ s. d.
Wine brandy, viz., spirits distilled from wine or must produced solely by the alcoholic fermentation of the juice of fresh grapes, per imperial proof gallon	0 12 6
Grape brandy, viz., the distillate resulting from the distillation solely of grape juice together with the husks, per imperial proof gallon	0 17 6
Dop brandy and spirits distilled from materials other than the produce of the vine, per imperial proof gallon	1 2 6

Beer.	Rate of Duty.
	£ s. d.
Beer brewed from worts of the specific gravity of not less than one thousand and twenty degrees, and not more than one thousand and thirty-nine degrees, per 36 imperial gallons	0 15 0
Beer brewed from worts of the specific gravity below one thousand and twenty degrees and above one thousand and thirty-nine degrees, per 36 standard gallons (With a proportionate increase or decrease for any difference in gravity.)	1 10 0
Lager beer produced from worts of the specific gravity of less than one thousand and forty degrees shall be charged at the higher rate of duty.	

Rebates of Excise Duties on Spirits.	Extent of Rebates.
(*a*) Spirits of a strength of 50 per cent. overproof and upwards when methylated in the manner prescribed by regulation	The whole duty.
(*b*) Plain spirits used in the manufacture of medicinal preparations, flavouring essences, and perfumed spirits; subject to the approval of, and to conditions imposed by, the Commissioner of Excise	The whole duty, less seven shillings and six pence per imperial proof gallon.
(*c*) Plain spirits used for industrial purposes, and rendered unpotable to the satisfaction of the Commissioner of Excise	The whole duty.
(*d*) Plain spirits used by scientific or teaching institutions for burning, preserving, or experimental purposes, and plain spirits used in, and essential for, the working of X-ray and similar apparatus, under such safeguards as the Commissioner of Excise may impose	The whole duty.
(*e*) Wine brandy and grape brandy, used in the fortification or preservation of pure wine, subject to compliance with the provisions of any Act relating to excise duties, or any regulations issued thereunder	The whole duty.
(*f*) Rectified spirit used in the manufacture of ether, or other substance, by a process which causes the ethyl alcohol to undergo chemical change, and provided that not more than 2 per cent. by volume of ethyl alcohol remains in the resulting ether or other product	The whole duty.
(*g*) Spirits exported for consumption outside the limits of the Union	The whole duty.
(*h*) Spirits lost through evaporation, leakage, or other unavoidable cause when such loss is proved to the satisfaction of the Commissioner of Excise	The whole duty.
(*i*) Spirits distilled in Natal from the products or by-products of the sugar-cane, when duty paid for consumption in Natal	Five shillings per imperial proof gallon.
(*j*) Plain spirits used in the manufacture of vinegar and acetic acid; subject to the approval of, and to conditions imposed by, the Commissioner of Excise	The whole duty, less two shillings per imperial proof gallon.
(*k*) Brandy distilled in a pot still, under excise supervision, wholly from pure wine or must the produce of pure grapes, approved of by the Government Brandy Board, at a strength not exceeding 30 per cent. over proof, matured by storage in an approved warehouse in approved wood for a period of three years and certified by the said Board to be pure wine brandy	Three shillings per imperial proof gallon.

(ii) *Cigarette Excise Surtax.*—The *Cigarette Excise and Surtax Act*, 1911, repealed the Cape Act of 1909, and re-enacted the tax throughout the Union. Instead, however, of the tax being collected by means of stamps affixed to each container at the time of their retail sale, the tax is now collected from the manufacturer by means of stamps affixed to the

container before cigarettes leave the factory, or from an importer at the time of first importation or delivery from a bonded warehouse. Manufacturers overseas are allowed to purchase the necessary stamps and affix them to the containers of cigarettes at the time of manufacture. The schedule of the Act imposing these duties, as amended by Act No. 35 of 1922, reads as follows :—

(*a*) On all cigarettes manufactured in the Union, whether made from tobacco grown or produced therein, or from tobacco imported therein, or from a mixture of Union grown and imported tobaccos, an excise duty for every one-half ounce net weight or fraction thereof ½d.
(*b*) On all cigarettes imported into the Union and delivered for consumption therein, a surtax (in addition to the duty payable under the Customs laws) for every one half-ounce net weight or fraction thereof..... ½d.

(iii) *Tobacco.*—Act No. 27 of 1924 imposed the following excise duties on tobacco manufactured in the Union, with similar customs duties on tobacco manufactured in a territory the Government of which has entered into a customs agreement with the Government of the Union, on importation into the Union :—

	Excise duty. s.	d.
(*a*) Ready for smoking in a tobacco pipe, including cake, plug, and stick tobacco, per pound weight	0	3½
(*b*) Ready for use in the making of cigarettes, per pound weight.....	0	6
(*c*) In the form of cigarettes, per pound weight.....	0	6
(*d*) In the form of cigars or cigarillos, per pound weight.....	1	0
(*e*) In the form of roll tobacco, per pound weight.....	0	2

(iv) *Sugar.*—The *Customs Amendment and Excise Duties Extension Act*, No. 22 of 1915, imposed a duty on Union sugar of 1s. per 100 lb. Act No. 37 of 1916 reimposed the duty until the 30th June, 1917 ; Act No. 36 of 1917 until 30th June, 1918 ; Act No. 20 of 1918 until 30th June, 1919 ; Act No. 32 of 1919 until 30th June, 1920 ; and the duty was made permanent by Act No. 44 of 1920.

(v) *Matches.*—The *Matches Duty Act*, No. 13 of 1914, imposed a duty on Union matches of 1s. per gross of boxes containing not more than 100 matches, 2s. per gross of boxes containing not more than 200 matches, and so on in proportion for any increase in size of boxes.

(vi) *Playing-Cards.*—The *Customs Amendment and Excise Duties Extension Act*, No. 22 of 1915, imposed a duty on Union playing-cards at the rate of 3d. per pack (not exceeding fifty-three cards). Act No. 37 of 1916 reimposed the duty until the 30th June, 1917 ; Act No. 36 of 1917 until 30th June, 1918 ; Act No. 20 of 1918 until 30th June, 1919 ; Act No. 32 of 1919 until 30th June, 1920 ; and the duty was made permanent by Act No. 44 of 1920.

(vii) *Acetic and Pyroligneous Acids, etc.*—The *Excise and Customs Tariff Amendment Act*, No. 37 of 1913, imposed a duty on Union acetic and pyroligneous acids, extracts and essences of vinegar, as follows :—

If of a strength not exceeding the strength of proof per gallon or fraction of a gallon..... 1s.
And in addition for each degree of strength in excess of the strength of proof per degree..... 4d.
Proof held to be equal to 6 per cent. of absolute acid.

(viii) *Patent or Proprietary Medicines.*—The *Customs and Excise Duties Amendment Act*, No. 23 of 1923, imposed a duty on patent or proprietary medicines sold or exposed for sale by retail, which was repealed by Act No. 27 of 1924.

§ 7. Patents, Designs, Trade Marks, and Copyright.

1. **General.**—Act No. 9 of 1916, which was brought into force on the 1st January, 1917, repealed all previous legislation embraced in no fewer than *thirty-two* Acts and Proclamations of the various Provinces, and made consolidated and comprehensive provision in respect of patents, designs, trade marks, and copyright in the Union. The administration of the Act is vested in the Minister of Justice, and the office concerned with each of the four subjects of the Act is expressly fixed at Pretoria, under a Registrar. Seals of office are provided for. Impressions of such seals are to be admitted in evidence, and judicially noted. The Registrar may in any proceedings before him—

(*a*) receive evidence on affidavit or *viva voce* upon oath ;
(*b*) summon witnesses and issue commissions *de bene esse* ;
(*c*) order discovery or inspection, and require the production of documents ;
(*d*) award costs against any party to proceedings before him.

The registers kept under the Act are open to public inspection on payment of the prescribed fee. Penalties are provided for offences against the Act, including the making

of false entries and of false statements. Officers of the patent office are forbidden to traffic in patents. Special penalty is enforceable in the case of the unauthorized use of the Royal Arms or the Arms of the Union upon any article.

2. **Patents.**—The following persons, whether British subjects or not, may make application for a patent:—

(*a*) The inventor, either alone or jointly with one or more other persons; or
(*b*) the inventor jointly with the assignee of a part interest in the invention; or
(*c*) the assignee of the inventor, either alone or jointly with one or more other persons.

An application for a patent must be made in a prescribed form, and must contain a declaration as to the facts relied upon to support the application. A provisional or complete specification in quadruplicate must be supplied.

The Registrar may accept or refuse the application or may return the specification or drawing for amendment; but in the case of refusal the applicant is permitted to appeal to the law officer. If the application and specification have been accepted, the Registrar gives written notice of that fact to the applicant, and in the case of a complete specification transmits one of the specifications to the Attorney-General at Cape Town, Pietermaritzburg, and Bloemfontein. The acceptance, if of a complete specification, must be advertised not later than one month from the date of such acceptance, and within two months after the last advertisement, or such further time as the Registrar may allow. Any person may give notice to oppose such patent on any of the following grounds, but no other:—

(*a*) That the applicant has obtained the invention from the person giving such notice (hereinafter referred to as the objector), or from a person of whom the objector is the legal representative or assignee;
(*b*) that the invention has been fraudulently obtained to the prejudice of another's rights;
(*c*) that the complete specification describes or claims an invention other than that described in the provisional specification, and that such other invention forms the subject of an application made by the objector in the interval between the leaving of the provisional specification and the leaving of the complete specification;
(*d*) that the invention is not novel, or is not capable of being patented in terms of the definition of invention in section *six* of the Act;
(*e*) that the person represented as being the inventor is not such;
(*f*) that the invention or the application of the same is contrary to law, public order, or good morals;
(*g*) that the complete specification does not sufficiently disclose or explain the invention or the manner in which it is to be performed.

Opposed applications are heard and determined by a judge. If there is no opposition or if an opposed application is determined in favour of the patent, a patent is granted on payment of the prescribed fee, and the patent is sealed. The term limit of a patent is *fourteen* years from its date, subject to extensions, which must be applied for under prescribed procedure. The effect of a patent is to grant to the patentee, subject to the Act and the conditions of the patent, full power, sole privilege, and authority, by himself, his agents and licensee during the term of the patent, to make, use, exercise, and vend the invention within the Union, so that he shall have the sole profit and advantage thereof.

Provision is also made for patents of addition, the restoration of lapsed patents, the revocation of patents, and the issue of a single patent for cognate inventions. Certain provisions are made as to procedure in respect of actions for infringements of patents. A patent may be acquired by the Government by agreement with the patentee or by arbitration. The inventor of any improvement in instruments or munitions of war may assign the patent to the Government.

Any person resident in the Union on passing the prescribed examination, and on paying to the registrar a fee of £5, may be registered as a *patent agent*. Attorneys are entitled to practise as *patent agents* without passing an examination.

Fees.—The following fees are payable in respect of a patent:—

On filing application for patent	£1.
On filing complete specification	£3.
On sealing patent	£1.

Renewal Fees.

1. Before the expiration of the third year from the date of the patent	£4.
2. Before the expiration of the seventh year from the date of the patent	£6.
3. Before the expiration of the tenth year from the date of the patent	£10.

NOTE.—*Any or all of the payments for renewals may be made in one sum.*

3. **Designs.**—The Registrar may, on the application (made in the prescribed form and manner) of any person claiming to be the proprietor of any new or original design not previously used in the Union, and not described in any printed publication, nor registered or patented in the Union or in any other country, register the design under the Act. A certificate of registration is then given. The effect of registration is to give the proprietor copyright for a period of *five years*. Extension of the period may be authorized on application and payment of the prescribed fee.

4. **Trade Marks.**—A registrable trade mark must contain or consist of at least one of the following essential particulars:—

(*a*) The name of a company, individual, or firm represented in a special or particular manner; or
(*b*) the signature of the applicant for registration or of some predecessor in his business; or
(*c*) an invented word or invented words; or
(*d*) a distinctive word or words not reasonably required for use in the trade; or
(*e*) any other distinctive mark.

The Registrar may refuse to register a trade mark which contains—

(*a*) a representation of the King, the Queen, or any member of the Royal Family, or of the Royal Crown; or
(*b*) the word "Royal" or any word, letter, or device indicating Royal or Government patronage; or
(*c*) a representation of the Royal Arms, or of a national flag of the United Kingdom, or of the national arms of the United Kingdom, or of the Arms or Seal of the Union; or
(*d*) a representation of any living person without his written consent.

Any person claiming to be the proprietor of a trade mark may apply for its registration in accordance with prescribed procedure. The Registrar's refusal to register may be appealed against. Opposition to registration may be noted. The registration of a trade mark is for fourteen years, but may be renewed from time to time upon payment of the prescribed fee. A trade mark may be removed from the register if the conditions as to use and renewal are not complied with.

5. **Copyright.**—The British *Copyright Act*, 1911, has been given effect in the Union, subject to certain modifications, the Governor-General exercising the powers of the Board of Trade, and any other reference to the Board of Trade being construed as a reference to the Minister. The Governor-General may by proclamation direct the extension of the British Copyright Act and the Union Act to literary, musical, dramatic, and artistic works first produced or published in any part of the British dominions to which the British Act does not extend in like manner as if such works had first been produced or published in the Union. Copyrights are registered by the Registrar.

6. **Return of Applications and Registrations of Patents, etc.**—The subjoined tables give for a period of years particulars as to the number of applications and registrations in respect of patents, trade marks, and copyright in the Union, together with details of the countries of origin of patents and trade marks and the classes of copyright works registered.

§ 8. Trading Licences.

1. **Description and Scale of Licences.**—Act No. 32 of 1925 has appended two schedules containing a list of specified trades, professions, and occupations for which licences have to be taken out before the trade, profession, or occupation can be carried on. The *First Schedule* provides for the following licences, which have full force and effect throughout the Union wheresoever they may be issued, except in the case of those which, in terms of the schedule, are required for or restricted to specific premises or areas.

(i) Agents for foreign firms.
(ii) Banker or banking institution.
(iii) Commercial traveller.
(iv) For sale of fireworks.
(v) Newspaper publishers.

The duties collected in respect of these licences accrues to the Consolidated Revenue Fund of the Union.

The *Second Schedule* contains a list of licences, shown by an asterisk in the lists below, which have force and effect only within the Province in which they are issued, save in those cases in which other provision is specifically made either in the schedule itself or elsewhere in the Act. The duties collected in regard to these licences accrue to the Provincial Revenue Fund of the Province in which liability for such licence duties arises. The Ordinances of the various Provinces provide, in addition, for a number of licences, the duties on which are collected and assigned to Provincial Revenue purposes.

With a few exceptions, licences fall due to be renewed on the first day of January each year, but in most cases if the liability to take out a licence only commences after the first day of July, the amount payable in respect of the licence is one-half the scheduled amount.

Every licence must be taken out in the district where the trade, profession, or occupation is carried on.

The following lists show the licences required to be taken out in each Province and the scale of duties payable :—

CAPE OF GOOD HOPE PROVINCE.

	£	s.	d.
*†Advertising agent or advertising contractor	5	0	0
*‡Aerated or mineral water manufacturer	10	0	0
*‡Aerated or mineral water dealer	3	0	0

In urban areas	20	0	0
Not in urban areas	15	0	0
Regimental canteen	Free		
Temporary, per diem	0	10	0
Transfer or removal	1	0	0

Importers' Licences.

From and after the 1st January, 1921, for the purpose of calculating the amount of licence duty payable by an importer, account is not taken of—

(*a*) the value of goods imported into the Province in transit to any place beyond the borders of the Province;

(*b*) the value of goods which, being the growth, produce or manufacture of the Union of South Africa, are imported into the Province from any other Province of the Union;

(*c*) the value of goods which, not being the growth, produce or manufacture of the Union of South Africa, are imported into the Province from any other Province of the Union provided that the said goods have been purchased by the importer from a person resident in that other Province.

For the purpose of calculating the said licence duty, the value of goods is the value as ascertained for Customs purposes, and every importer pays the licence duty immediately the value of his importations reaches any of the tariff amounts prescribed in Ordinance No. 16 of 1920.

NATAL PROVINCE.

UNION.

The annual payment in respect of all railway refreshment cars is one total sum of £500.

The annual payment in respect of each railway refreshment room in which intoxicating liquor is sold is such sum as is payable in respect of a bar licence in the district in which such refreshment room is situated.

The annual payment in respect of each railway refreshment room where intoxicating liquor is not sold is such sum as is payable for similar privileges in the district in which such refreshment room is situated.

The Railways and Harbours Administration and the Departments of Customs and Mines also control the issue of certain licences.

2. **Licences Issued.**—Particulars are given in the tables below as to the number of licences issued and the amount paid for licences in each Province for a period of years, distinguishing between licences reserved to the Union Government, licences assigned to Provinces, and licences transferred to Provinces. In making use of information contained in the tables it should be noted that the licence laws are neither general nor uniform throughout the Union. In consequence, certain trades or professions may not be liable to licence duty in certain Provinces and liable in others under existing legislation.

NOTE.—The licences in respect of Natal *include* certain municipal trading and liquor licences, *vide* section 14, *Financial Relations Act*, 1912.

§ 9. Stamp Duties and Fees.

The following is the tariff of stamp duties and fees prescribed by the *Stamp Duties and Fees Act* of 1911, as amended by Act No. 31 of 1913 and Act No. 31 of 1921. The detailed application of the categories enumerated therein is subject to the decision of the Commissioner of Inland Revenue, if there exists any doubt as to the head under which a particular transaction falls for the purposes of the Acts. From time to time the Commissioner issues a circular summarizing decisions and interpretations under the Acts.

Tariff of Stamp Duties:

	£	s.	d.
Affidavit or Solemn or Attested Declaration—In respect of every deponent or declarant except that an affidavit or declaration made on behalf of a company or partnership, or by persons holding jointly the office of administrator, executor, curator, tutor or trustee, and deposing or declaring only as such, shall be deemed to be made by one deponent or declarant	0	1	0
Exemption: Any affidavit or declaration required to be made in connection with any payment to, or refund from, the public revenue, or any payment in respect of pension by the Imperial or any Colonial Government.			
Antenuptial or Postnuptial Contract	1	0	0
Agreement or Contract in respect of which no other stamp duty is specifically provided—if the matter thereof be of the value of £10 or upwards	0	1	0
Exemptions: (*a*) Contracts or agreements relating to the sale, supply, or delivery of goods, wares, or merchandise (including live stock and agricultural produce);			
(*b*) Contracts or agreements for the hire of any domestic servant, labourer, or seaman.			
Arbitration or Award: Every deed of submission and every award: If the amount or value in dispute do not exceed £50	0	2	6
If it exceed £50	0	5	0
Authentication Certificate given by any Minister or public officer in his official capacity or under his official seal testifying to the identity of any person or the authenticity of any signature on a document for use outside the Union: Provided that where more than one signature or seal is required to complete the authentication, one payment of duty shall be sufficient	0	10	0
Bank Note: In lieu of the duty imposed under "Promissory Note" a composition duty at the rate of ten shillings per cent. of the average monthly circulation within the Union of the Notes of any bank during each half year.			

	£	s.	d.
Bill of Exchange or Promissory Note :			
(1) Payable on demand.....	0	0	1
(2) Payable otherwise than on demand :			
(i) When the amount or value does not exceed £10.....	0	0	1
(ii) When the amount or value exceeds £10, but does not exceed £50.....	0	0	6
(iii) When the amount or value exceeds £50—for every £50 or part thereof.....	0	0	6

Exemptions :

(*a*) Bank notes on which the composition duty aforesaid is payable.
(*b*) Draft or order by any banker on another banker not available for payment or credit to any third person and used solely for settling or clearing accounts between such bankers.
(*c*) Coupon or warrant for interest or dividend attached to or issued with any marketable security.
(*d*) Bill or draft by or upon the Union Treasury or any public account.

Bill of Lading for the carriage or transport of any goods by sea, for every such bill or copy or duplicate thereof. 0 0 6

Bond : (1) Any mortgage bond hypothecating immovable property or interest in such property and any general or special bond passed before a notary public : provided that in the case of any such bond which is executed by way of suretyship only and is collateral to a duly stamped bond for the same debt or obligation executed by the principal debtor or obligor, the duty chargeable shall be one shilling for each £100 or part thereof of the debt secured or to be secured :—

(*a*) Where the total amount of the debt secured or to be secured does not exceed £500—for every £100 or part thereof.....	0	1	0
(*b*) Where the total amount of the debt secured, or to be secured, exceeds £500, but does not exceed £1000—for every £100 or part thereof	0	1	6
(*c*) Where the total amount of the debt secured or to be secured exceeds £1000, but does not exceed £2000—for every £100 or part thereof.....	0	2	6
(*d*) Where the total amount of the debt secured or to be secured exceeds £2000— for every £100 or part thereof.....	0	5	0
(2) Any bond mentioned in (1) which is auxiliary or collateral to or substituted for a previously made and duty stamped bond executed by the same person and for the same debt or obligation—a duty at the rates mentioned in (1) but not exceeding....	0	10	0
(3) Cession of any such bond as mentioned in (1) :—			
(*a*) Where the amount remaining due does not exceed £1000—for every £100 or part thereof.....	0	1	0
(*b*) Where the amount remaining due exceeds £1000—for every £100 or part thereof.....	0	2	6
(4) Cession of any auxiliary, collateral, or substituted bond as aforesaid...	The like duty as is chargeable on the bond.		

Exemptions :

(*a*) Bond given solely in security for any payment due to the public revenue.
(*b*) Bond given by any public official in respect of the discharge of his official duties.

Broker's Note :

Where the consideration exceeds £5 and does not exceed £25.....	0	0	1
Where the consideration exceeds £25, but does not exceed £50.....	0	0	6
Where the consideration exceeds £50, but does not exceed £100.....	0	1	0
Where the consideration exceeds £100 for every £100 or part thereof.....	0	1	0

Exemption :

(*a*) Note of sale or purchase on behalf of another broker or agent within the Union who is acting in the same transaction for a principal.
(*b*) Note in respect of the sale or purchase of any stock issued by the Government of the Union.

Certificate by any person (other than a Notary) in a public or official capacity of any act or thing having been done or performed or of any document or copy of any document..... 0 1 0

Exemptions :

Certificates in respect of which any fee or duty be otherwise chargeable by law or regulation.

Charter Party :

(1) Of any vessel or ship not exceeding 500 tons burthen.....	0	15	0
(2) Of any vessel or ship exceeding 500 tons burthen but not exceeding 1000 tons.....	1	10	0
(3) Of any vessel or ship exceeding 1000 tons burthen.....	2	10	0

Company Capital Duty :

Five shillings per cent.on a statement of the amount of nominal capital or increase of nominal capital for registration thereof.

Customs Documents :

On each original bill or document of entry or document in lieu thereof..	0	0	6

Exemption :

Any bill or document of entry coastwise from any port in the Union to any other port in the Union.

Lease or Agreement of Lease or any instrument intended or operating as a lease or agreement to let (including a sub-lease) provided the lease, agreement, or instrument is not chargeable with Transfer Duty :—

(1) (*a*) If the lease, agreement, or instrument be by the month or for any definite period of less than one year ; or			
(*b*) If the lease, agreement, or instrument be for any definite period but terminable by one month's notice or less than one month's notice :—			
If the rent does not exceed the rate of £2. 10s. per month.....	0	0	6
If the rent exceeds the rate of £2. 10s. per month but does not exceed the rate of £5 per month	0	1	0
If the rent exceeds the rate of £5 per month but does not exceed the rate of £10 per month.....	0	2	6
If the rent exceeds the rate of £10 per month but does not exceed the rate of £15 per month..	0	5	0
If the rent exceeds the rate of £15 per month but does not exceed the rate of £20 per month.....	0	10	0
If the rent exceeds the rate of £20 per month but does not exceed the rate of £25 per month.....	0	15	0
If the rent exceeds the rate of £25 per month.....	1	0	0
(2) If the lease, agreement, or instrument be for a definite period of one year or longer, duty shall be payable according to the following scale on a sum equal to the aggregate amount of rent payable during the period of the lease, agreement, or instrument, *plus* the amount of any other consideration whatso-			

	£	s.	d.
ever due or payable in respect of or by virtue thereof :—			
If the lease, agreement, or instrument be for any period not exceeding five years—for every £100 or part thereof.....	0	5	0
If the lease, agreement, or instrument be for any period exceeding five years but not exceeding ten years—for every £100 or part thereof.....	0	7	6
If the lease, agreement, or instrument be for any period exceeding ten years but not exceeding twenty years—for every £100 or part thereof.....	0	10	0
If the lease, agreement, or instrument be for any period exceeding twenty years—for every £100 or part thereof.....	0	15	0
Provided that if in any case it be shown to the satisfaction of the Commissioner that the aggregate amount of rent or other consideration on which duty is payable exceeds the full selling value of the property leased, duty shall be payable only on the amount of such full selling value.			
(3) Any lease, agreement, or instrument for an indefinite period not within any of the foregoing classes shall for the purposes of duty be deemed to be for three years; but after the expiration of any period of three years, the lease, agreement, or instrument shall, if indefinitely continued or renewed, be stamped again for another period of three years.			
(4) Lease, agreement, or instrument aforesaid—			
Cession or Assignment.....	0	5	0
Any Cession or Assignment by a lessee or holder provided such cession be not liable for Transfer duty.			
Duplicate original of any instrument, the original whereof is chargeable with stamp duty under any law in force within the Union: the like duty to that chargeable upon the original, but not to exceed.....	0	1	0
Exemptions.			
Any duplicate original in respect of which a substantive stamp duty is otherwise chargeable. Any duplicate original which is required to be filed of record in any public office of the Union.			
Marketable Security—including any scrip, certificate, warrant, or any other like instrument representing any share, stock, or debenture, or any right of option to acquire any such share, stock, or debenture of any company or other corporate body (excepting a local authority or a building society) :—			
(1) In respect of the original issue within the Union of any such shares, stocks, or debentures—			
(*a*) if transferable only by registration: for every £10 or part thereof of nominal value.....	0	0	6
(*b*) if made out to bearer or in any manner so as to be transferable by delivery only, for every £10 or part thereof of nominal value	0	2	0
Exemptions :			
(i) Where the scrip, certificate, warrant, or like instrument is issued solely in substitution for any instrument or instruments of the same nature of like or equivalent value, withdrawn, cancelled, or lost, which were owned by the person to whom the issue in substitution is made :			

	£	s.	d.
Provided that this exemption shall only be allowable if the new instrument is endorsed by a director, secretary, or responsible officer as being *bona fide* a substitution without change of ownership.			
(ii) Any share or other instrument or document issued in connection with the capital of any co-operative society or company with limited liability registered under Act No. 28 of 1922.			
(2) In respect of the registration of the transfer of any such marketable security: for every £100 or part thereof of the amount or value of the consideration given, or where no consideration is given, of the value of the marketable security transferred.....	0	1	0
Notarial Act or Instrument :			
Any notarial act or instrument in respect of which no other stamp duty is specially provided, and any notarial grosse duplicate, original, or copy of any instrument.....	0	2	0
Partnership :			
Agreement of Partnership.....	1	0	0
Policies of Insurance :			
(1) Policy of life insurance :—			
If the sum assured do not exceed £50.....	0	0	1
If the sum assured exceed £50 but do not exceed £500—for every £100 part thereof.....	0	0	6
If the sum assured exceed £500 but do not exceed £1,000—for every £100 or part thereof.....	0	1	0
If the sum assured exceed £1,000—for every £100 or part thereof..	0	1	6
(2) Policy of insurance against accident to a person or in respect of injury, incapacity, sickness, or the like—every policy.....	0	1	0
Every renewal thereof.....	0	1	0
(3) Policy of insurance whereby a sum is payable to cover any compensation or damage due under a law relating to workmen's compensation or employer's liability or the common law, in respect to the death, or illness of, or injury to, an employee, or any third party insurance—every policy.....	0	1	0
Every renewal thereof.....	0	1	0
(4) Policy of insurance or renewal thereof of any other kind, including marine insurance, fidelity insurance, plate glass insurance, insurance against burglary, fire, or any other risk, loss or damage or any combined or other insurance not specified in (1), (2) or (3)—for every £100 or part thereof of the sum insured..... Subject to a minimum duty of 6d. and a maximum duty of £5.	0	0	1
(5) Any policy or renewal thereof where the sum assured is not a specific sum.....	0	1	0
(6) Cession of any policy of insurance Provided that the duty on any cession shall not exceed the duty to which the ceded policy would be liable under the foregoing provisions.	0	2	0
(7) In respect of any tickets, coupons, notices, bills, or other documents purporting to be or to entitle to an insurance in the event of death, injury, sickness, or the like.	A duty of two and a half per cent. on the annual receipts from the sale or issue for valuable consideration of any such document.		

	£	s.	d.
Where a renewal under (2), (3), or (4) is for less than a yearly period *pro rata* duty only shall be payable—for example— for a half-yearly renewal, one-half of the duty; for a quarter of a year's renewal, one-quarter of the duty.			
(8) Any interim policy of insurance, the currency of which does not exceed four calendar months.....	0	1	0
Provided that the duty on any such interim policy shall not exceed that payable upon a final policy covering a like risk.			
Exemption:			
Policies solely for the purpose of effecting reinsurance by one insurance company or association in another insurance company or association to cover general risks.			
Power of Attorney or any instrument of like kind:—			
(1) Proxy to vote at any specified meeting or adjournment thereof..	0	0	1
(2) Any special power, or substitution under any power of attorney whatsoever..... (in respect of each grantor)	0	1	0
(3) To act generally for the grantor.. (in respect of each grantor)	0	5	0
(4) Of any kind not comprised in the foregoing..... (in respect of each grantor) Except that a power granted by or on behalf of a company or partnership or by persons holding jointly the offices of administrator, executor, curator, tutor, or trustee, and granting the power in any such capacity only shall be deemed to be given by one grantor.	0	1	0
Receipt:			
(1) If given for or upon the payment of money of the amount of £1 or upwards.....	0	0	1
(2) If given for or in respect of any fixed deposit made with any bank, company, or association whether corporate or unincorporate—for every £100 (or part thereof) and for every period of twelve months (or part thereof) for which the deposit is made.....	0	0	6
Exemptions:			
(*a*) Receipt or acknowledgment by any Government official for any payment or deposit received by him in his official capacity.			
(*b*) Receipt or acknowledgment on Postal Orders or Money Orders or Post Office Savings Bank forms.			
(*c*) Receipt passing between any legally established benefit society, provident society, building society, or savings bank society, and any member thereof.			
(*d*) Acknowledgment or slip relating to money deposit (other than on fixed deposit) with a bank to the credit or account of any person.			
(*e*) Acknowledgment by a bank or a notary of the receipt of any bill or note for the purpose of being presented for acceptance or payment.			
(*f*) Receipt received in the Union, but executed outside the Union and relating to the payment made outside the Union.			
(*g*) Receipt given by a prisoner or discharged prisoner to the prison authorities in respect of money paid to him or on his behalf during imprisonment or on discharge from prison.			
(*h*) Receipt for pay and allowances given by any member of the Union Defence Forces in time of war, and receipts for pay or allowances given by any member of those forces other than the South African Permanent Force, in time of peace.			
Security or Suretyship:			
Any document of security or pledge or any act of suretyship, indemnity, or guarantee not otherwise chargeable with duty:—			
(1) For any sum not exceeding £10.	0	0	1
For any sum exceeding £10, but not exceeding £50.....	0	0	6
For any sum exceeding £50, but not exceeding £100.....	0	1	0
For any sum exceeding £100—for every £100 or part thereof...	0	1	0
(2) Where no amount is stated....	0	2	6
(3) Not comprised in the foregoing.	0	2	6
Exemption:			
(1) When given solely in relation to any payment due to the public revenue.			
(2) A cession by a co-operative company to the Land and Agricultural Bank of South Africa as security for a loan of the company's right and title to— (*a*) the amount of subscribed but unpaid capital, and to the amount of any contingent liability attaching to its shares; and (*b*) the amount of any debts owing to the company (section 3 of Act No. 40 of 1922).			
Survey of a Ship or Vessel:			
Certificate thereof.....	0	2	6
Transfer Deed:			
Relating to immovable property—for every £10 or part thereof of the consideration or value.....	0	0	6
Exemption:			
(1) Partition transfers except in respect of consideration paid by one of the parties thereto to another such party.			
(2) Transfers whereby no change of beneficial interest in the property transferred is effected.			
General Exemptions in respect of all Instruments:			
(1) No stamp duty and no fee payable by means of stamps in any court or public office shall be chargeable in respect of:— (*a*) Any instrument, or the registration, lodgment, issue, or use thereof, if the duty or fee thereon would be legally payable and borne by the Government of the Union or any department thereof or by the Imperial Government. (*b*) Any instrument used, or for use, in or in connection with criminal proceedings, or charge laid of a criminal offence, or in connection with bail.			
(2) Any instrument specially exempted from stamp duty under any law shall not be chargeable with duty by reason of the provisions of this Act.			

§ 10. Weights and Measures.

1. **Weights and Measures Act.**—An historical review of the weights and measures systems of the four Provinces of the Union, up to the passing of the Union Act which consolidated the existing legislation, was given in the fourth issue of this *Year Book*. The *Weights and Measures Act*, No. 32 of 1922, which came into operation on the 1st April, 1923, established standard weights and measures throughout the Union, and embodied the principle of the optional use of metric and Imperial standards, subject to provisions contained in the Act. The standards adopted are set out in the First Schedule to the Act, and are as follows :—

STANDARD MEASURES OF WEIGHT, LENGTH, AND CAPACITY.

WEIGHT.

1 pound	= 0·4535924 kilogram.	1 kilogram	= 2·2046225 pounds (avoir.)

LENGTH.

1 yard	= 0·9143992 metre.	1 metre	= 1·0936143 yard.

CAPACITY.

1 gallon	= 4·545963 litres.	1 litre	= 0·219975 gallon.

New standards may be approved from time to time by Proclamation.

The denominations of the weights and measures which may be assized and used in trade are specified in the Second Schedule to the Act, and are given hereunder, multiples and parts being in each case omitted :—

WEIGHTS AND MEASURES USED IN TRADE.

I. WEIGHTS.

1. *Avoirdupois Weight.*
   Ton=2,000 pounds.
   Cental (cl.)=100 pounds.
   Pound (lb.).
   Ounce (oz.)=437·5 grains=28·3495 grams.
   Dram (dr.).
2. *Troy Weights (for Precious Metals).*
   Ounce troy (oz. tr.)=480 grains=31·1035 grams.
   Pennyweight (dwt.)=24 grains (grs.).
3. *Carat Weights (for Precious Stones).*
   *Carat (ct.)=200 milligrams=3·08647 grains.
4. *Apothecaries Weights.*
   Ounce (oz. apoth.)=480 grains.
   Drachm=3 scruples.
   Scruple.
   Grain.
5. *Metric Weights.*
   Metric tonne=1,000 kilograms.
   Kilogram.
   Gram.
   Decigram (0·1 gram).
   Centigram (0·1 decigram).
   Milligram (0·1 centigram).

II. CAPACITY.

1. *Liquid Measures.*
   Gallon (gal.).
   Quart (qt.)=¼ gallon.
   Pint (pt.)=½ quart.
   Gill=¼ pint.
2. *Apothecaries Measures.*
   Pint.
   Fluid ounce (fl. oz.).
   Fluid drachm (fl. dr.).
   Minim (min. or M.).
3. *Metric Measures (Liquid).*
   Decalitre (10 litres).
   Litre (1·0).
   Decilitre (0·1 litre).
   Centilitre (0·01 litre).
   Millilitre (0·001 litre).

III. LENGTH AND AREA.

1. *Length.*
   Customary multiples and parts of the yard, the foot, the inch, the metre, the Cape foot (=0·3148581 metre) and the Cape rood.

2. *Area.*
   The squares of the standard measures of length and

The morgen	=	600 sq. roods.
	=	86,400 sq. Cape feet.
The acre	=	4,840 sq. yards.
	=	43,560 sq. English feet.
The hectare	=	10,000 sq. metres.

* International (metric) carat, which equals ·974165 of old carat.

Cape measures of length and area may not be used except for measuring land, and then only so far as the survey laws of any portion of the Union admit such use.

Provision is made for the administration of the Act by a superintendent and assizers, and for the appointment of an assize board. Local authorities or combinations of local authorities may be authorized to administer the Act within their areas.

The following is the personnel of the Assize Board appointed under the Act :—Official Members, J. C. Davidson, Superintendent of Assize (Chairman); Dr. Hans Pirow, Government Mining Engineer. Non Official Members, Professor J. C. Orr, O.B.E.; W. A. Martin, Secretary of Johannesburg Chamber of Commerce; and A. C. Marsh, Esq., Secretary to the Board.

2. **Weights and Measures used in connection with Agricultural Production.**—The denominations, etc., commonly used in measuring farming produce in the Union are indicated in the following statement :—

Cereals are measured by the bag.
Fresh Fruit is measured by the basket or the box (of various weights).
Dried Fruit and *Strawberries* are measured by weight.
Hay and other *stock feed* is measured by the ton (2,000 lb.).

STANDARD WEIGHTS ADOPTED FOR VARIOUS PRODUCE.

Wheat, rye, maize, kaffir corn, peas, beans	Bag (200 lb.)
Boer meal, rye meal, and cockle	„ (200 lb.)
Maize rice or maize grit	„ (190 lb.)
Maize flour, maize (seconds), crushed maize, maize meal	„ (180 lb.)
Barley and oats	„ (150 lb.)
Buckwheat, hominy chop, germ meal, pollard	„ (150 lb.)
Potatoes	„ (150 lb.)
Onions and sweet potatoes	„ (120 lb.)
Sunflower seed	„ (100 lb.)
Wheaten bran	„ (100 lb.)
Crushed oats	„ (100 lb.)
Monkey nuts	„ (80 lb.)
Maize bran	„ (80 lb.)
Sugar cane	Ton (2,000 lb.)
Wine, brandy, and vinegar	Leaguer (about 127 gal.)

MEASURES OF LENGTH, SURFACE, AND VOLUME IN COMMON USE.

Cape Land Measures.

12 Linear Cape feet	=	1 linear Cape rood.
144 Cape square feet	=	1 Cape square rood.
600 Cape square roods	=	1 morgen.
1,000 Cape feet	=	1,033 English feet.
1 morgen	=	2·11654 English acres.

Timber Products Measurements.

1 standard gauge sleeper (7 ft. by 10 in. by 5 in.)	=	2½ cubic feet.
1 pole, 6 ft. 6 in. long, diameter 5·3 in.	=	1 cubic ft.
10 fencing droppers (5 ft. long, 2 in. diameter)	=	1 cubic ft.
33 cubic feet average roughly 1 ton (2,000 lb.).		
1 large wagon-load of firewood averages 90 cubic ft.		

3. **Assizing Fees.**—Subjoined is the schedule of fees levied in respect of the assizing and re-assizing of instruments and weights and measures.

TARIFF OF ASSIZING FEES.

Weighing Instruments Assized—	s.	d	
30 tons and above	80	0	each
5 tons and under 30 tons	30	0	„
1 ton and under 5 tons	12	6	„
1000 lb. and under 1 ton	7	6	„
100 lb. and under 1000 lb.	5	0	„
10 lb. and under 100 lb.	3	0	„
Under 10 lb.	2	0	„
Self-indicating counter scales, 3 lb. and under	4	0	„
Self-indicating counter scales over 3 lb.	6	0	„

NOTE.—When any weighing instrument is rejected by the assizer as incorrect at places other than a place provided in section twenty-four (1) of the Act the fee to be charged shall be equal to half the aforementioned fees.

	s.	d.	
Weights Assized—			
50 lb. and over	0	9	each
Over 5 lb. and under 50 lb.	0	6	,,
5 lb. and under	0	4	,,
Over 10 oz. troy	1	0	,,
10 oz. to 2 oz. troy, inclusive	0	6	,,
1 oz. to ·001 oz. troy, inclusive	0	4	,,
Apothecaries carat and grain weights	0	4	,,
Measures Assized—			
32 to 8 gallons inclusive	3	0	,,
Under 8 gallons and over 2 gallons	2	0	,,
2 and 1 gallon	1	0	,,
½-gallon and quart	0	6	,,
Pint and under (metal)	0	3	,,
Glass milk measures	0	1	,,
Apothecaries measures	1	0	,,
Tape measures over 10 feet	3	0	,,
Tape measures 10 feet and under	0	6	,,
Weights and Measures Adjusted, etc.—			
Over 20 lb.	1	0	,,
20 lb. and under	0	6	,,
8 gallon and over	2	6	,,
Under 8 gallon and over 2 gallon	2	0	,,
2 gallon and ½-gallon, inclusive	1	0	,,
Under ½-gallon	0	6	,,
Denominating metal measures	1	0	,,
Denominating glass measures	0	3	per doz.
Solder studs	0	3	each.

NOTE.—For assizing metric weighing instruments, weights, and measures the fee to be charged is calculated to the nearest denomination of any of the above-mentioned items.

For automatic machines of a similar capacity to the aforementioned the fee to be charged is double such fees.

For measuring instruments which by approved mechanism automatically indicate the length of material passed through, the fee to be charged is 6s.

For measuring instruments which by approved mechanism automatically measure the superficial area of material passed through, the fee to be charged is £1.

For self-measuring liquid pumps the fee to be charged is :—	s.	d.
(*a*) Where the capacity of the pumps is under 1 gallon	5	0
(*b*) Where the capacity of the pumps is 1 gallon or over	10	0

Where an assizer attends at a place other than a District Assize Office, or the premises of a manufacturer or repairer of weighing instruments, weights, or measures, the fee to be charged is as specified in the preceding tables plus 25 per cent.

Where an outlay is incurred for the transport of standards, the amount thereof is levied *pro rata* on the users of weights, measures, weighing, and measuring machines so tested.

NOTE.—The *pro rata* provision of this clause refers to the expenses incurred for the transportation of standards required to perform tests elsewhere than at the District Assize Office.

CHAPTER XIX.

HARBOURS AND SHIPPING.

§ 1. Harbours.

1. **General.**—The harbours and lighthouses of the Union are owned and managed by the Government. They are associated under the *South Africa Act* with the railways of the Union for the purposes of control and administration, and financially are upon the same footing as the railways under the provisions of the constitution dealing with the Railway and Harbour Fund. The administration is required to be upon business principles, due regard being had to agricultural and industrial development within the Union.

2. **Harbour Advisory Boards.**—Harbour Advisory Boards are constituted at the harbours of Table Bay, Mossel Bay, Port Elizabeth, East London, and Durban. Each Advisory Board consists of seven members. One member is nominated by the Municipal Council of the town at which the harbour is situate, three by the Chamber of Commerce of such town, and the remaining three members are nominated by the Governor-General. In the nomination of the last-mentioned three members, one is selected to represent shipping interests, and one to represent persons paying harbour dues and charges.

The General Manager of Railways and Harbours furnishes the Boards with such information and affords them such reasonable facilities as may be necessary for the determination of any matter under consideration, or for the due and proper fulfilment of their duties and functions. It is the duty of the Boards to advise the Administration upon any matter affecting the interest or welfare of the respective harbours; the construction, maintenance, and upkeep of harbour works; the landing, shipping, and transhipping of cargo; the charges upon goods and upon shipping, and the regulations affecting importers, shippers, and the trade of the port generally. The Boards also furnish the Administration with their opinion upon any subject or question referred to them for advice.

3. **Capital Expenditure on Harbours.**—Particulars are given hereunder from the yea 1912 as to the accumulated capital expenditure and interest on capital in respect of the harbours of the Union :—

HARBOURS—CAPITAL EXPENDITURE AND INTEREST ON CAPITAL, 1912 TO 1923-24.

Year.	Capital Expenditure.	Interest on Capital.
	£	£
1912	11,644,566	379,405
1913	11,910,974	384,654
1914	12,154,146	387,227
1915	12,326,915	395,254
1916	10,200,167*	389,420
1917–18	10,180,131	327,714
1918–19	10,259,180	331,836
1919–20	10,354,073	335,525
1920–21	10,288,962	345,474
1921–22	11,221,521	347,435
1922–23	11,856,828	376,315
1923–24	12,523,771	372,107

* Decrease is due to the transfer of certain assets from harbours to railways during the year 1916.

4. **Revenue and Expenditure of Harbours.**—The subjoined tables show (i) the yearly revenue and (ii) the yearly expenditure of harbour administration in the Union from the year 1910 under the main classifications :—

(i) **UNION HARBOURS REVENUE, 1910 TO 1923–24.**

Year.	Dues on Ships.	Dues on Goods and Live Stock.	Water.	Tugs and Lighters.	Landing, Shipping, and Transhipping. Charges.	Cranage Service.	Other Revenue.	Total.
	£	£	£	£	£	£	£	£
1910.....	65,380	143,648	6,438	26,517	160,708	15,609	45,500	463,800
1911.....	90,989	253,027	13,800	46,062	296,259	23,775	115,719	839,631
1912.....	104,206	280,056	15,836	47,327	355,251	30,050	114,313	947,039
1913.....	112,074	302,854	15,583	45,864	418,258	29,819	115,044	1,039,496
1914.....	120,531	244,572	20,005	44,281	398,391	30,982	117,569	976,331
1915.....	102,232	248,648	20,529	49,728	379,839	32,648	132,736	966,360
1916.....	136,364	363,253	19,815	74,114	282,741	34,151	121,154	1,031,592*
1st Jan. to 31st March, 1917.	34,315	106,400	6,906	22,539	6,026	10,793	22,709	209,688
1917–18†.....	141,245	475,360	25,284	92,381	5,329	46,717	140,462	926,778
1918–19†.....	103,759	583,133	13,952	76,339	3,175	43,739	115,243	939,340
1919–20†.....	125,542	598,780	19,054	96,785	7,507	49,619	112,956	1,010,243
1920–21†.....	175,246	956,954	18,838	114,232	19,539	62,253	134,534	1,481,596

1916.....	305,604	249,275	44,660	599,539	57,000	656,539*
1st Jan. to 31st March, 1917...	76,398	16,661	5,629	98,688	19,000	117,688
1917–18†.....	298,396	39,882	31,818	370,096	86,849	456,945
1918–19†.....	319,013	37,895	37,063	393,971	85,895	479,866
1919–20†.....	406,867	50,087	40,159	497,113	86,396	583,509
1920–21†.....	510,964	60,462	44,525	615,951	83,997	699,948
1921–22†.....	498,825	61,044	44,928	604,797	83,519	688,316
1922–23†.....	430,943	58,730	33,684	523,357	59,430	582,787
1923–24†.....	468,126	58,886	35,085	562,097	52,098	614,195

* The earnings and expenses in connection with the shore work at the harbours, which were previously included in harbour accounts, have been included in railway accounts as from 1st September, 1916.
† Year ended 31st March.

5. **Government-Owned Steamers.**—In 1919 the Union Government acquired three steamers of 15,069 total gross tonnage, which are worked and controlled by the Railways and Harbours Administration. The following table gives the revenue and expenditure relative to this undertaking from the year 1919–20 :—

STEAMSHIPS—REVENUE AND EXPENDITURE, 1919–20 TO 1923–24.

Year.	Expenditure.				Revenue.			Net Profit.
	Working Expenditure.	Interest.	Miscellaneous.	Total.	Freight.	Miscellaneous.	Total.	
	£	£	£	£	£	£	£	£
1919–20	139,143	18,680	18,750	176,573	252,051	16,851	268,902	92,329
1920–21	242,643	27,500	28,194	298,337	351,929	13	351,942	53,605
1921–22	203,254	17,256	17,270	240,780	250,145	208	250,353	9,573
1922–23	146,156	17,256	17,256	180,668	183,342	107	183,449	2,781
1923–24	127,352	12,135	12,135	151,622	155,887	8	155,895	4,273

During 1925, the Railways and Harbours Administration added to its fleet two new steamers, each of approximately 5,000 gross tonnage.

6. **Staff of Harbour Department.**—The subjoined table gives the number of employees of the Harbour Department at 31st March, 1925, classified according to race and distinguishing salaried, daily paid, and casual employees :—

HARBOURS—NUMBER AND PARTICULARS OF STAFF, 31st MARCH, 1925.

Classification.	Regular Staff.				Casual.					Total.
		Non-European.								
	European.	Native.	Indian.	Other Coloured.	European.	Native.	Indian.	Other Coloured.	Convict.	
Salaried	280	—	—	—	—	—	—	—	—	280
Daily paid	870	1,354	180	637	215	—	8	52	1,022	4,338
European labourers	9	—	—	—	474	—	—	—	—	483
Total	1,159	1,354	180	637	689	—	8	52	1,022	5,101

7. **Berthing Facilities.**—The following diagrams give outlines of harbour works in the principal ports of the Union, together with particulars as to berthing facilities, depth of water, and other matters :—

ALGOA BAY, PORT ELIZABETH, 1925.

Particulars.

Jetty.	Dimensions.	Depth of Water along Working Portion at L.W.O.S.T.	Cranes.		
			No.	Capacity.	Description.
North Jetty	Total length, 1,204 ft. Working portion, length 720 ft., breadth 84 ft.	9 ft. at inshore end, 24 ft. at seaward end	1 6 2	7 tons 2 tons 15 cwt.	Hydraulic. Hydraulic. Hydraulic.
South Jetty	Total length, 1,162 ft. Working portion, length 705 ft., breadth 108 ft.	14 ft. at inshore end, 23 ft. at seaward end	1 9 1	7 tons 3 tons 20 tons	Hydraulic. Hydraulic. Electric.
Dom Pedro Jetty	Total length, including viaduct, 1,460 ft. Working portion, length 860 ft., breadth 105 ft.	13 ft. at inshore end, 24 ft. at seaward end	4 8	3 tons 2 tons	Hydraulic. Hydraulic.

Shed and Storage Accommodation (exclusive of Warehouses let to the Public).

Floor space ..... 308,400 sq. ft.
Cubic capacity (approximate) ..... 3,000,000 cubic ft.

Open roadstead with unlimited depth.

Lighterage.—33 lighters (total capacity, about 3,750 tons) and water-boat.

Tugs.—The port is equipped with four tugs, three of which are fitted with modern salvage and fire appliances.

Lifeboat.—Fully equipped.

Repairing Facilities.

Slipway.—Capacity, 400 tons dead weight.

Storage of Coal.—Sites for 100,000 tons. Two "Temperley" Transporters and two 4-ton cranes and weighbridges erected at New Amsterdam coal yard.

Shed and Storage Accommodation.—
Floor space for cargo in sheds..... 488,599 square feet.
Cubic capacity of sheds..... 5,035,312 cubic feet.

Chilling Chambers.—The installation consists of 12 chambers of 76,187 cubic feet capacity, providing accommodation for over 900 tons of fruit pre-cooling at one time. The erection of a new double storey cargo shed and pre-cooling store on No. 8 Quay, East Pier, is in progress.

Fuel Tanks.—Three tanks each with a capacity of 4,000 tons and one tank with the capacity of 10,000 tons. Total capacity, 22,000 tons. The tanks which are privately owned are equipped with pumping plant and service pipe lines to quays.

Grain Elevator.—One terminal grain elevator of 30,000 tons capacity with loading conveyors to No. 4 Quay, also up-to-date loading appliances fitted on No. 4 Quay. Intake capacity 1,000 tons per hour. Shipping capacity 750 tons per hour.

Entrance Depth to Harbour.—At L.W.O.S.T., 40 feet.
Anchorage in roadstead, under shelter of breakwater, for vessels of any draught.

Lighters used for coaling purposes:—14 lighters of aggregate capacity of about 3,285 tons.

Tugs.—The port is equipped with three powerful tugs and two smaller craft. The three large tugs are equipped with modern salvage and fire appliances.

Repairing Facilities:—
Graving Dock.—Length on keel blocks..... 500 ft.
Width at coping..... 90 ft.
Width at entrance top..... 68 ft.
Maximum width at bottom (keel block height) 56½ ft.
Depth on sill, H.W.O.S.T..... 25 ft.
Dock can be emptied in three hours.

Slips.—Patent slip for craft up to 500 tons, with accommodation for two vessels at a time. Also two boat slips for yachts and small craft.

Harbour Engineer.
31st March 1925.

DURBAN HARBOUR, PORT NATAL, 1925.

PARTICULARS

WHARFAGE.	Length.	DEPTH AT L.W.O.S.T.		CRANES.	
		Maximum.	Minimum.	No.	Capacity.
POINT.					
Quay Wall	6,266 ft.	38 ft. 6 in.	23 ft.	1 1 24 11 15 4 9 15	Hydraulic, 50 tons (fixed). Hydraulic, 10 tons (travelling). Hydraulic, 3 tons (travelling). Electric, 3 tons (travelling). Electric, 4 tons (travelling). Travelling cranes 10 tons (steam). Hydraulic wharf capstans. Electric wharf capstans.
Repairing Quay	600 ft.	22 ft.	22 ft.	—	—
Jetty	285 ft.	15 ft.	15 ft.	—	For use of coal barges only.
Fish Jetty	600 ft.	15 ft.	15 ft.	—	—
BLUFF.					
Quay Wall	2,365 ft.	35 ft.	30 ft.	1	Floating crane, 15 tons.
Timber Wharf	100 ft.	25 ft.	25 ft.	—	For Explosives.
CONGELLA.					
Timber and Reinforced Concrete Wharf	4,660 ft.	32 ft. 6 in.	25 ft.	—	—
Quay Wall (Graving Dock)	700 ft.	26 ft.	—	—	—

Shed and Storage Accommodation.—

Floor space	574,370 square feet.
Cubic capacity	8,337,561 cubic feet.
Cubic capacity of outside storage accommodation	**7,216,139 cubic feet.**

Average Working Depth at Entrance.—At L.W.O.S.T., average 37 feet outer channel, 32 feet inner channel.

Punts and Lighters.—Thirty lighters and punts of aggregate capacity of about 3,300 tons.

Tugs.—The port is equipped with five powerful tugs fitted with modern salvage and fire appliances and two smaller craft.

Repairing Facilities.—

Graving Dock.—Length, 1,150 feet; width at entrance, 110 feet; at coping, 138¼ feet, divided into two compartments, inner, 440 feet; outer, 660 feet; depth on sill H.W.O.S.T., 41 feet; L.W.O.S.T 35 feet.

Floating dock, 475 feet long by 60 feet, internal breadth, with lifting capacity of 6,500 tons.
Floating crane lifting capacity 15 tons.
Patent slip capable of lifting craft up to 150 tons.

Coaling Appliances.—Belt conveyor and bucket transporter coaling appliances are installed at the Bluff. These appliances are electrically driven, and capable of coaling five vessels simultaneously at the rate of 1,000 tons per hour. Coal is automatically weighed whilst loading. Capacity of dumpers, 100 tons and 80 tons respectively. Capacity of storage bins, 10,000 tons. Sites available in vicinity of appliances for stacking 70,000 tons of coal.

Oil Facilities.—The oil storage sites are located at Island View, where a timber wharf 490 feet in length exists, with a depth of 30 feet alongside. Benzine in bulk is discharged into tank direct from this wharfage per medium of 8 inch pipe lines. The Benzine Storage comprises three tanks of 1,250,000 gallons capacity each. There are three oil fuel tanks of a capacity of 2,000,000 gallons each erected at the oil sites, and fuel oil is pumped to these tanks per pipe lines laid from site to the Bluff Wharf in the vicinity of the coaling appliances dumper.

8. Lighthouses, etc.—The following list gives particulars in regard to the lighthouses, fog signals, whistle buoys, life-saving appliances, etc., under the control of the Union Government:—

LIGHTHOUSES, HARBOUR LIGHTS, ETC., ON THE SOUTH AFRICAN COAST.

Station.	Class of Light.	Candle Power.	Range of Light.	Remarks.
			Miles.	
SOUTH WEST AFRICA.				
Swakopmund.....	5th Order Dioptric.	21,000	20	Revolving white, two flashes every 10 secs.
Walvis Bay Harbour.	6th Order Dioptric.	200	6	Automatic red at end jetty, flash every 3 secs.
Walvis Bay, Pelican Point	6th Order Dioptric.	500	8	Automatic harbour light, white flash every 3 secs.
Diaz Point.....	3rd Order Dioptric.	120,000	18	Revolving white, flash every 4 secs.
,, ...	Subsidiary Light...	—	—	Fixed, with white and red sectors.
,, ...	Fog-syren.....	—	—	One blast every 20 secs.
CAPE PROVINCE.				
Port Nolloth.....	5th Order Dioptric.	4,000	13	Revolving white, flash every 5 secs., and rocket apparatus.
,, ...	Explosive Fog Signal	—	—	One explosion every 15 mins.
Hoetjes Point (Saldanha Bay)	6th Order Dioptric.	500	8	Automatic, flash every 3 secs., with red and white sectors.
Dassen Island.....	1st Order Dioptric..	180,000	18	Revolving white, flash 3 secs., eclipse 4 secs.; revolving white, flash 3 secs., eclipse 20 secs.; and wireless telegraph.
Robben Island.....	1st Order Dioptric..	38,000	18	Revolving white, flash 5 secs., eclipse 2 secs.
,, ...	Twin, 7-in. Diaphone	—	—	One blast every 20 secs.
Green Point (Capetown)	3rd Order Dioptric, 5-in. Diaphone	75,000	13¾	Revolving white, flash every 10 secs. One blast every 30 secs.
Table Bay (Breakwater)	6th Order Dioptric	500	10	Automatic red light, flash 2 secs., eclipse 8 secs.
,, ,,	Fog Bell.....	—	—	Strikes once every 6 secs.
Slangkop.....	1st Order Dioptric..	500,000	18	Revolving white, four flashes every 20 secs., and rocket apparatus.
Cape Point.....	1st Order Dioptric..	500,000	23	Revolving white flash 0·38 secs., eclipse 2·40 secs.; flash 0·38 secs., eclipse 8·23 secs; flash 0·38 secs., eclipse 8·23 secs; and rocket apparatus and signal station.
,, ...	Subsidiary Light...	—	—	Fixed red over bellows and anvil rocks.
Roman Rock (Simons Bay)	4th Order Dioptric.	5,000	12	White flash every 6 secs., automatic.
Kalk Bay Harbour..	6th Order Dioptric.	200	7	Automatic, flash 2·5 secs., eclipse 12·5 secs., white and red sectors.
Danger Point.....	1st Order Dioptric..	165,000	18	Revolving white, three flashes every 40 secs.
Cape L'Agulhus.....	1st Order Dioptric..	470,000	18	Revolving white, flash every 3 secs.; rocket apparatus and signal station.
Cape St. Blaize.....	4th Order Dioptric.	20,000	15	Revolving white, two flashes every 15 secs., and signal station.
,, ...	Explosive Fog Signal	—	—	One explosion every 10 mins., daytime only.
Mossel Bay Harbour Jetty	6th Order Dioptric.	200	8	Automatic, flash every 5 secs., red, white, and green sectors.
Cape St. Francis....	2nd Order Dioptric.	120,000	16¾	Revolving white, flash every 5 secs., and signal station.
Cape Receiffe.....	1st Order Dioptric..	125,000	15	Revolving white, flash every 60 secs., and signal station.
Algoa Bay Anchorage Lights	6th Order Dioptric.	500	7	Near light, red flash 4 secs., eclipse 1 sec., automatic.
,, ,,	6th Order Dioptric.	500	7	Distant light, white flash every sec., automatic.
Port Elizabeth.....	4th Order Dioptric.	5,000	12	Flash 2 secs., eclipse 8 secs., red and white sectors, wireless telephone and signal station.
Port Elizabeth (Dom Pedro Jetty)	6th Order Dioptric.	200	7	Automatic red, 3 flashes every 12 secs., indicating breakwater extension.
Bird Island.....	1st Order Dioptric..	180,000	16	Revolving white, flash 3 secs., eclipse 4 secs.; flash 3 secs., eclipse 20 secs.; and wireless telephone.
Great Fish Point....	1st Order Dioptric..	600,000	20	Revolving white, flash every 10 secs.
Hood Point.....	1st Order Dioptric..	312,000	20	Revolving white, four flashes every 40 secs., and signal station.
East London (Beach)	6th Order Dioptric.	200	6	Automatic white, flash every 3 secs.
East London Harbour (Breakwater)	4th Order Dioptric.	2,000	10	Automatic white, flash 2 secs., eclipse 8 secs.
East London (Eastern Breakwater)	4th Order Dioptric.	2,000	6	Automatic: Green, 3 flashes every 9 secs.

LIGHTHOUSES, HARBOUR LIGHTS, ETC., ON THE SOUTH AFRICAN COAST—*continued.*

Station.	Class of Light.	Candle Power	Range of Light.	Remarks.
			Miles.	
Bashee River.....	—	—	—	In course of erection.
Cape Hermes.....	4th Order Dioptric.	30,000	19½	Revolving white, flash every 3 secs., and signal station.
NATAL.				
Port Shepstone.....	5th Order Dioptric.	27,000	15	Revolving white, flash every 10 secs., and signal station.
Green Point.....	2nd Order Dioptric.	240,000	23	Revolving white, two flashes every 15 secs.
„	Subsidiary Light...	—	—	Fixed red over Aliwal Shoals.
The Bluff (Durban)..	3rd Order Dioptric.	150,000	23	Revolving white, three flashes every 20 secs.
Port Natal Leading Lights	4th Order Dioptric.	2,000	6	Near light, red flash every sec., automatic.
„ „	5th Order Dioptric.	2,000	6	Distant light, white flash 4 secs., eclipse 1 sec., automatic.
Port Natal (Anchorage)	5th Order Dioptric.	2,000	5	Complex group: Automatic red flash, 3 secs., eclipse 2·7 secs., Automatic red flash, 3 secs., eclipse 2·7 secs, Automatic red flash 3·0 secs., eclipse 6·0 secs.
Port Natal (South Breakwater Light)	Electric.....	200	3	Fixed white light.
Port Durnford.....	4th Order Dioptric.	6,000	15	Automatic white, flash every 5 secs.
Cape St. Lucia.....	4th Order Dioptric.	6,000	15	Automatic white, two flashes every 10 secs.
North Pier Light....	Electric.....	200	4	Occulting green light, flash 3 secs., eclipse 1 sec.

§ 2. Shipping.

1. **Shipping from 1910.***—The following tables (i) and (ii) give particulars as to the number and tonnage of vessels entered at Union harbours from 1910. These figures represent the gross number of vessels entered and cleared, and not the net number, that is the actual number of separate vessels calling at ports of the Union and enumerated once only. Table (iii) gives the number and tonnage of vessels under the heading of nationality entered during the same period:—

(i) NUMBER AND TONNAGE OF VESSELS ENTERED AT UNION HARBOURS, 1910 TO 1924.

YEAR.	STEAM—COASTWISE.		STEAM—OVERSEA.		SAILING.		TOTAL.	
	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.	No.	Tonnage.
1910...	2,339	6,284,238	1,724	5,091,944	101	118,673	4,164	11,494,855

CHAPTER XX.

RAILWAYS AND LAND TRANSPORTATION.

§ 1. Railway Development in South Africa.

1. **General.**—In the first three issues of the *Year Book*, an account was given of the more important stages of railway development in the Union. The first table in § 3 below gives the mileage of Government and private lines from the year 1910 onwards, while the second table furnishes particulars regarding the mileage of Government railways in each Province from the year 1873.

2. **Comparison with other Dominions.**—The following table gives comparative figures regarding mileage of open line, mileage of line per 1,000 square miles of territory, and mileage of open line per 1,000 of estimated population for Australia, Canada, New Zealand, and the Union at the latest date for which particulars are available :—

Heading.	Australia. (30th June, 1923.)	Canada. (31st Dec., 1922.)	New Zealand. (31st March, 1924.)	Union of South Africa.* (31st March, 1924.)
Mileage of open line	26,711	39,773	3,188	**11,677**
Mileage of line per 1,000 square miles	8·98	11·04	30·69	**14·70**
Mileage of line per 1,000 of estimated population—				
European	4·69	4·53	2·47	**7·16**
All Races	4·69	4·53	2·37	**1·55**

* Including South West Africa.

3. **Railway Construction Acts, 1922, 1924, and 1925.**—*Act No.* 30 *of* 1922, provided for the construction and equipment of the following lines of railway :—

SCHEME OF RAILWAY CONSTRUCTION UNDER ACT No. 30 OF 1922.

Particulars.	Approximate Length.	Estimated Cost.
	Miles.	£
†*Belmont to Douglas	53	198,114
*Dunswart to Apex, main line deviation via Benoni	4	115,461
Ermelo (Buhrmanns-Tafelkop) to Lothair	27	125,577
†Fort Beaufort to Balfour (2-ft. gauge)	23	65,000
Frankfort to Villiers, thence to a point on the Transvaal-Natal Main Line	51	269,420
*Franklin to Kokstad	25½	132,192
*Franklin to Matatiele via Cedarville	47½	225,768
George to Knysna	42	296,820
†Harrismith to Warden	36½	196,059
†*Heilbron to Petrus Steyn	31½	145,656
†*Hercules to Magaliesburg	50½	257,196
*Kamfersdam to Winters Rush	35	130,410
†*Klipdale to Bredasdorp	24	101,520
†*Lydenburg to Olifantspoortje via Ohrigstad	71	398,168
†Nylstroom to Vaalwater	43½	187,468
†*Oudtshoorn to Calitzdorp	34	167,042
†*Rustenburg to Boschhoek	17	64,141
†Senekal to Marquard	30	170,100
†*Settlers to Tuinplaats	14	49,000
†Touws River to Ladismith	89	445,000
†Upington to Kakamas via Keimoes (2-ft. gauge)	56	113,000
*Zastron to Wepener	46	234,508
*Rapenburg-Vygekraal Native Location line	2	12,924
TOTAL	853	4,100,544

* Opened for public traffic prior to 31st July, 1925. The remaining lines are under construction.
† Agricultural railway.

The Zululand Railway Construction Act, 1924, authorized the building of a railway from Matubatuba (Natal North Coast line) to the south bank of the Pongola River, 88 miles, at an estimated cost of £419,760. The construction of the line is in progress.

Act No. 33 *of* 1925 provided for the construction and equipment of the following lines of railway :—

RAILWAY CONSTRUCTION UNDER ACT No. 33 OF 1925.

Particulars.	Approximate Length.	Estimated Cost.
	Miles.	£
*Addo to Kirkwood	21¼	87,550
*Balfour to Seymour (2-ft. gauge)	8	28,104
*Bothaville to Bultfontein	78	351,000
*Brits to Beestekraal	28½	132,810
*Ceres to Prince Alfred Hamlet	6½	37,570
*Citrus to Plaston	18	65,394
*Derwent to Blinkwater	41	223,860
*Empangeni to Nkwaleni	40	183,200
*Ficksburg to Groenfontein	17	107,610
*Greytown Branch to Rietvlei	24	131,520
*Hermon to Porterville	34	187,680
*Imvani to St. Marks	22	102,586
*Joubertsdal to Witfontein	52	255,840
*Klaver to Bitterfontein	91½	466,009
*Klerksdorp to Maquassi *Vermaas to Ottosdal	110	535,060
*Martindale to Southwell	27	142,371
*Molteno to Jamestown	44	233,200
*Naboomspruit to Zebediela	52½	154,605
*New England to Barkly East	19	147,174
*†Ondekaremba to Witvlei	86	348,300
*Parys to Vredefort	10	48,700
*Petrus Steyn to Lindley Road	37	183,520
*Potchefstroom to Losberg	31½	146,696
*Somerset East to Bruintjes Hoogte	21½	106,719
*Winters Rush to Koopmansfontein	29	123,511
TOTAL	949½	£4,530,589

* These are all agricultural railways.
† South West Africa.

4. **Electrification of Railways.**—Act No. 30 of 1922 provides for the electrification of any line of railway in respect of which moneys have been appropriated by Parliament for that purpose, and for the erection of the necessary power stations and equipment. Provision is also made for the use, subject to existing rights, of the water in public streams for the purpose of working electric generating stations.

In terms of Act No. 42 of 1922, provision has been made for power for electric traction purposes to be generated and supplied by the Electricity Supply Commission. The Electricity Supply Commission will not only furnish the Railway Administration with power for railway requirements, but will generally deal with the co-ordination of the production of electric energy throughout the Union for commercial and municipal purposes.

A number of schemes for the electrification of portions of the South African railway system have been investigated, and in 1922 the Government decided upon the electrification of the section Glencoe to Pietermaritzburg on the Natal main line, together with the Howick branch line, a distance of 173½ route miles.

The original scheme entailed the electrification of approximately 244 track miles, but in consequence of the development of traffic, it has been found necessary to electrify additional lines consisting mainly of sidings, goods yards, etc., and to provide and electrify a new marshalling yard at Masons Mill, which is situated on the south side of Pietermaritzburg. The track electrified has consequently increased to approximately 310 miles.

The Natal main line carries a heavy goods service in addition to passenger traffic. The present electrification scheme, which is nearing completion, is designed for dealing with a maximum daily tonnage of 30,000 in the coastwards direction, in addition to passenger traffic.

Construction work was commenced in September, 1922, and electric operation was first started between Daimana and Chieveley in October, 1924.

A full electric service was inaugurated on the first section, from Daimana to Mooi River, on the 28th May, 1925; on the second section, from Daimana to Glencoe, on the 27th July, 1925. Electric working on the third section, from Mooi River to Pietermaritzburg, was gradually introduced and finally extended to Pietermaritzburg (including Masons Mill) on the 18th April, 1926. thus so far completing the scheme as to permit electric working of all trains with a few minor exceptions from Glencoe to Pietermaritzburg.

The power station, which is situated on the Tugela River at Colenso, consists of a steel frame building with brick filling. The equipment consists of eight boilers, each of which is capable of producing 60,000 lb. of steam per hour at a pressure of 270 lb. per square inch above atmosphere, superheated to 700° F. There are five turbo-alternators, each capable of a continuous output of 12,000 kilowatts at 6,000 volts three-phase, and an output of 20,000 kilowatts for two minutes.

Five step-up transformers for raising the voltage from 6,600 to 88,000, which is the pressure of transmission, are located in an outdoor static sub-station adjacent to the power station.

Two separate transmission lines, about half a mile apart, convey power at 88,000 volts to the step-down traction sub-stations along the electrified route. There are twelve traction sub-stations situated at varying distances along the electrified section, and the equipment, which is automatic, transforms the current from 88,000 to 6,600 volts. Current is then converted by synchronous motors from 6,600 three-phase a.c. to direct current at 3,000 volts, the pressure at which it is conveyed to the overhead contact line for "feeding" the electric locomotives.

The overhead equipment of the permanent way consists of a copper catenary supporting a copper contact wire by means of droppers. The track structures are steel lattice masts, erected on concrete foundations.

Seventy-eight electric locomotives have been supplied and additional locomotives are being obtained as traffic increase necessitates. The erection of the seventy-eight units was undertaken in the Administration's workshops at Pietermaritzburg, the contractors utilizing the Administration's labour. The locomotives are of the double bogie articulated type, driven by four motors carried on the bogies. Each of the motors is of 300 h.p., and the locomotive is capable of exerting a tractive force of 23,000 lb. at the one-hour rating, and a continuous tractive effort of 16,400 lb. The locomotives are regarded as "units"; either one or two units being used for passenger trains, and three units for a heavy goods train. Whether one, two, or three units are used for hauling a train, only one crew, i.e. a driver and an assistant, is necessary. The locomotives are fitted with electro-pneumatic control, and are so arranged that current can be returned to the overhead line when running on down gradients; at the same time the speed of the trains is retarded without the use of the wheel brakes.

With three electric units coupled together, loads of 1,640 tons are hauled between Glencoe and Ladysmith, and 1,430 tons south of Ladysmith, or approximately double the ordinary loads under steam traction.

It is the practice, as far as possible, to dispatch block loads of 1,500 tons from Glencoe, which are hauled to Pietermaritzburg by a three-unit locomotive.

The Colenso power scheme and distribution system have been designed to provide current at various points along the electrified route for railway, municipal, and industrial purposes. Under the provisions of Act No. 42 of 1922, negotiations have been concluded by the Electricity Supply Commission with a number of municipalities and local boards to supply them with electricity from Colenso, and under this arrangement current is now being supplied to the Ladysmith and Estcourt Municipalities and the Glencoe Local Board. Negotiations with other prospective consumers are proceeding.

The Administration has also commenced the electrification of certain of the Capetown suburban lines, i.e. from Capetown to Simonstown and from Monument to Sea Point. Unlike the electrification of the Natal main line, which deals mainly with goods traffic, electric traction will be introduced on the Capetown suburban lines for passenger traffic only. No electric locomotives will be required on this section, as trains will consist of motor coaches and trailers. This multiple-unit system has proved successful, and is generally adopted for intensive suburban traffic.

Work is proceeding on this scheme and contracts have been arranged for new motor coaches and trailers. Tenders are being obtained for the overhead equipment of the permanent way and for the provision of certain transmission and distribution lines.

The Electricity Supply Commission will be responsible for the erection of the power station, sub-stations, and distribution lines for the Capetown scheme and will supply current to the Administration for traction and other purposes. Power will be transmitted from the sub-stations to the overhead contact wires at 1,500 volts direct current for "feeding" the electric rolling stock.

By the middle of 1926, the Commission's construction work had been commenced and was making good progress.

§ 2. Gauge of Railways.

1. **General.**—The first three issues of the *Year Book* contained an account of the circumstances leading to the adoption of the 3 ft. 6 in. gauge as the standard gauge throughout South Africa and of the policy followed in constructing narrow-gauge branch lines in certain instances.

At the 31st March, 1924, there were 1,108 miles of narrow-gauge railway in the Union and South West Africa. Tables in § 3 give details of the mileage of line of various gauges in the Union and in each Province and South West Africa at that date.

§ 3. Construction and Open Mileage.

1. Open Mileage.—The following table gives figures showing the open mileage of Government and private railway lines in each Province at the 31st December, 1910 to 1916, and at the 31st March, 1918, and succeeding years :—

OPEN MILEAGE OF GOVERNMENT AND PRIVATE RAILWAY LINES IN EACH PROVINCE AT 31st DECEMBER, 1910 TO 1916, AND 31st MARCH, 1918, AND SUCCEEDING YEARS.

South West African mileages are included as from the year 1922–23.

§ 4. Administration of Government Railways.

1. **Administration of Union Government Railways.**—The whole of the railways (and harbours—see Chapter XIX) in the Union are, with few exceptions, the property of the Government, and since the constitution of the Union have been administered under the provisions of the *South Africa Act*, 1909.* This provides *inter alia* that—

> subject to the authority of the Governor-General-in-Council the control and management of the railways, ports and harbours of the Union shall be exercised through a Board consisting of not more than three Commissioners, who shall be appointed by the Governor-General-in-Council, and a Minister of State, who shall be chairman. Each Commissioner shall hold office for a period of five years, but may be reappointed.

A further Act to interpret the provisions of the above-mentioned law relating to the Railway Board and to define the functions of that Board was passed in the year 1916.

The pertinent provisions of this later Act are as follows:—

> The management and working of the Railways and Harbours shall, subject to the control of the Minister, be carried out by the General Manager, who shall be governed by such regulations as the Minister may from time to time frame after consultation with the Board.

The executive head of the Department is the General Manager of Railways and Harbours, with headquarters at Johannesburg. In him is vested the entire management and control as set out in the foregoing extract from the Act of 1916. Four Assistant General Managers, each controlling his respective system, the Chief Civil Engineer, and Chief Mechanical Engineer are responsible to the General Manager.

In terms of Act No. 20 of 1922, the railways and harbours in the territory of South-West Africa became an integral part of the railways and harbours of the Union, and are controlled by a Divisional Superintendent stationed at Windhoek, who is directly responsible to the General Manager.

The headquarters of each of the four systems are situated at Cape Town (System A), Bloemfontein (System B), Johannesburg (System C), and Durban (System D). Under the three Assistant General Managers stationed at Cape Town, Bloemfontein, and Johannesburg, respectively, and directly responsible to them, are Divisional Superintendents. These officers control one of the Divisions in each of the systems A, B, and C. There are altogether nine of such Divisions—two in System "A," three in System "B," two in System "C," one in System "D," and one in South West Africa, controlled from Cape Town, Kimberley, Port Elizabeth, East London, Bloemfontein, Durban, Johannesburg, Pretoria, and Windhoek. In the case of the Divisions controlled from Cape Town, Bloemfontein, Johannesburg, and Durban, where Assistant General Managers are stationed, the office of Divisional Superintendent is dispensed with, and the work of the Division, in addition to the work of the Assistant General Manager, is carried out under that officer. Under each Divisional Superintendent there are Superintendents and Assistant Superintendents (Technical, Commercial, and Operating), by whom the staff operating the railways are immediately controlled.

2. **Principles of Railway Administration.**—The principles upon which the Railways and Harbours) of the Union are administered are clearly defined in the following extract rom the *South Africa Act*:—

> The railways, ports and harbours of the Union shall be administered on business principles, due regard being had to agricultural and industrial development within the Union and promotion, by means of cheap transport, of the settlement of an agricultural and industrial population in the inland portions of all provinces of the Union;

and the following further extract as to the financing of the railways indicates the principle on which the rates leviable for the conveyance of traffic are governed:—

> So far as may be the total earnings shall not be more than are sufficient to meet the necessary outlays for working, maintenance, betterment, depreciation and the payment of interest due on capital, not being capital contributed out of railway or harbour revenue.

3. **Railway and Harbour Fund.**—In the *South Africa Act* provision is made for the establishment of a Railway and Harbour Fund into which all revenues raised or received from the administration of the railways and harbours are paid and from which are withdrawn all moneys necessary to meet the expenditure of the Railway and Harbour Department, but only such expenditure as has received the approval of Parliament. Withdrawals

---

* For particulars of the administration of the South African railway system prior to 1910, reference should be made to the sixth and earlier issues of this *Year Book*.

from the fund may be made for unforeseen expenditure to the extent of £500,000 or such additional sum as is represented by the excess of the actual revenue over the estimated revenue. Such expenditure, however, must be reported as soon as Parliament meets. All profits earned remain at the credit of the fund and are not paid to the Treasury as was the practice prior to the constitution of the Union. Expenditure on Capital Account is made from moneys received from the Treasury out of Loan Funds. Unexpended balances are returned to the Treasury. The Administration has no liability in respect of the cost of raising or discount expenses in connection with the flotation of loans. Such expenses are wholly defrayed by the Treasury, jointly with expenses for meeting the requirements for Public Works and other purposes served by loans.

4. **Staff.**—The following table gives details as to the staff employed on the Government Railways at the 31st March, 1918, and succeeding years :—

GOVERNMENT RAILWAYS—PARTICULARS OF STAFF EMPLOYED AT 31st MARCH 1918 TO 1925.

Year.	Regular Staff.				Casual Staff.		Grand Total.
	European.			Coloured.	European.	Coloured.	
	Salaried.	Other.	Total.				
*1917–18.....	7,305	26,938	34,243	32,544	128	3,302	70,217
*1918–19.....	7,916	27,367	35,283	34,962	130	2,953	73,328
*1919–20.....	8,501	31,138	39,639	38,189	121	3,013	80,962
1920–21.....	8,752	32,599	41,351	40,802	104	3,569	85,826
1921–22.....	8,147	28,111	36,258	29,921	†689	1,879	68,747
1922–23.....	7,915	27,196	35,111	35,307	†1,349	3,966	75,733
1923–24.....	7,936	29,521	37,457	40,631	188	3,450	81,726
1924–25.....	8,201	36,774	44,975	39,335	401	2,560	87,271

* These figures do not include the staff in South West Africa.
† These figures include labourers employed under Unemployment Relief Scheme.

5. **Principal Officers of the Railway Administration.**—The following are the principal officers of the Railways and Harbours Administration :—

Railways and Harbours Board...	Hon. C. W. Malan (Chairman), Albert Kuit, Peter Whiteside, and C. T. M. Wilcocks (Railway Commissioners).
General Manager.....	Sir W. W. Hoy, K.C.B., M.Inst.T.
Assistant General Managers.....	R. B. Gettliffe, M.Inst.T., J. R. More, M. Inst.C.E., P. E. Potter, M.Inst.T. (Actg.), R. R. Parrott, D.S.O., M.Inst.T.
Chief Civil Engineer.....	R. C. Wallace, M.I.C.E., M.Inst.T.
Chief Mechanical Engineer.....	Colonel F. R. Collins, V.D., D.S.O., M.Inst.C.E., M.Inst.T.
Chief Electrical Engineer.....	T. P. Pask, M.Inst.E.E.
Chief Accountant.....	G. A. Reid.
Chief Railway Storekeeper.....	H. J. Lyddon.
Catering Manager.....	A. H. Simmons.
Manager, Publicity Department...	A. H. Tatlow.

6. **Expenditure on Salaries, Wages, and Pensions.**—The following tables show (i) the expenditure of the Railways Administration on salaries and wages from 1910–11, under various headings, and (ii) the amounts paid in pensions each year from 1911 :—

(i) SOUTH AFRICAN RAILWAYS—TOTAL AMOUNT EXPENDED ON SALARIES AND WAGES, 1917–18 TO 1923–24.

Heading.	Average 1910-11 to 1913–14.	1917–18.	1918–19.	1919–20.	1920–21.	1921–22.	1922–23.	1923–24.

7. **South African Railways and Harbours Publicity Department.**—The Publicity Department of the South African Railways and Harbours is controlled by a Publicity Manager, with Headquarters at Johannesburg and Branch offices at Cape Town and Durban. The Department is also represented in London by an official, styled "Publicity Agent," who is attached to the staff of the High Commissioner for the Union of South Africa.

The functions of the Publicity Department differ somewhat from those of similar departments in other countries; in scope they are wider, and in many directions they are a distinct departure from the accepted practice of both British and American railways which usually limit their "publicity" to advertising the districts served by their particular lines.

The purely commercial activities of the Department include :—

(*a*) The control of all bookstalls and automatic vending machines on the stations of the Administration's lines throughout the Union.

(*b*) The control of public advertisements of every description upon the lines of the Administration, and in various publications, such as telephone directories, Post Office guides, railway time tables, and the *South African Railways and Harbours Magazine*.

Under what may be styled technical activities, the functions of the Department are more diverse, and include :—

(*a*) A large photographic section, where photos, enlargements, lantern slides, and other pictorial media are prepared for propaganda purposes.

(*b*) A translating and press-cutting section.

(*c*) A section responsible for placing the numerous advertisements of the Administration in the local and overseas Press.

(*d*) A journalistic section.

The work of the last-named section is extremely varied in character, and embraces the preparation of articles for the Press, and the compilation, both for the Administration and for municipalities, of brochures, designed to attract tourists and holiday makers to specific resorts. But its most important function is in connexion with the Government's organization for disseminating overseas propaganda relative to South Africa. This organization has for its object the attraction to South Africa of persons of capital to assist in the development of the agricultural and industrial resources of the country. As an accessory to this propaganda, the attraction of tourists from overseas also plays a considerable part. The methods in vogue are both novel and original, and aim at a continuous and varied presentation of facts, so marshalled as to compel and sustain attention.

§ 5. Engines and Rolling Stock.

1. **Engines in Service.**—The following table gives the number of 3 ft. 6 in. gauge engines in service at the 31st March, 1924, with comparative figures from the year 1911. In addition to the engines referred to in the table, which are 3 ft. 6 in. gauge, there were in service on the 31st March, 1924, sixty-five engines (including thirteen engines in service in South West Africa) of 2 ft. gauge :—

NUMBER OF 3 ft. 6 in. GAUGE RAILWAY ENGINES IN SERVICE AT END OF EACH YEAR, 1911 TO 1916, AND AT 31st MARCH, 1917 TO 1924.

Tractive Force, lb. (75 per cent. of Boiler Pressure.)	Number of Engines.	Total Tractive Force.	Average Tractive Force.	Average Weight.
		lb.	lb.	Tons (2,000lb.).

1922–23*.....	8,883,268	4,447,438	19,695,467	33,026,173	41,838,223
1923–24*.....	9,499,337	4,644,912	24,009,441	38,153,690	48,423,772

* Year ended 31st March.

3. **Speed of Trains.**—The speed of main line trains varies according to loads, grades, and other local conditions. Between Cape Town and Johannesburg and Durban and Johannesburg, the times for the journeys work out as follows :—

SPEED OF MAIN LINE TRAINS.

Section.	Miles.	Time in Hours.	Average Miles per Hour.
Cape Town–Johannesburg.....	956	30	32
Johannesburg–Cape Town.....	956	29½	32¼
Durban–Johannesburg.....	482	20¼	23¾
Johannesburg–Durban.....	482	21½	22¼

These averages include all stops at stations and depots en route, but the actual running speed on short sections where the conditions are favourable is frequently 35 to 40 miles per hour with ordinary main line trains, and 50 to 52 miles with Limited Expresses. Fast non-stop trains are run between Cape Town and Muizenberg and between Pretoria and Germiston. The speed of these trains averages 37 miles per hour for the whole journeys of 15½ miles and 36 miles respectively.

In July, 1925, four experimental main line engines—two "Mountain" and two "Pacific" type—built by the Baldwin Locomotive Company, were placed in traffic on the express passenger trains between Johannesburg and Cape Town. The use of these engines enabled the journey to Cape Town to be accelerated by 58 minutes, and in the reverse direction by 15 minutes.

Experience with this type of engine having proved satisfactory, further engines of a similar type were obtained and others are on order.

The results achieved have been satisfactory. The grease lubrication employed on these engines has effected economy; coal consumption has been less; additional service per engine day has been obtained; an increase of 15 per cent. in the load hauled, as compared with other "Mountain" type engines, has been secured; and the engines have established a world record for coal-burning locomotives on a 3 ft. 6 in. gauge by hauling a fast mail train between Cape Town and Johannesburg, a distance of 956 miles.

4. **Length of Journeys.**—Particulars in regard to the length of journeys between certain principal railway centres are contained in the subjoined table:—

LENGTH OF JOURNEYS BETWEEN PRINCIPAL CENTRES IN MILEAGE AND TIME.

Points between.		Mileage.	Hours.
Bloemfontein–	Beira	1,493	89¼
	Bulawayo	820	42½

	Lourenco Marques	349	13½
	Port Elizabeth	740	32¼
	Victoria Falls	1,007	61½
	Windhoek	1,382	72

The longest continuous journey over the Union railways is from Klaver in the Cape Province to Somkele in Natal, the distance being 1,555 miles.

The railway to the north has now been extended about 575 kilometres beyond the Belgian Congo border at Sakania, and a continuous journey can be made from Cape Town to Bukama, a distance of about 2,500 miles.

5. **Road Motor Services.**—The South African Railways and Harbours Administration has had certain road motor services in operation for a number of years, and as a result of the experienced gained, several additional services have been introduced recently and others are under consideration.

The following road motor services are in operation, or authorized :—

Services by Passenger Vehicles and Light Goods Lorries—

Bot River–Hermanus.
Bellville–Durbanville.
Sea Point–Clifton (passengers).
Johannesburg–Rivonia.

Services by 1½ or 2 ton Pneumatic Tyred Vehicles.—Conveying passengers, parcels, mails, perishable produce, and light goods :—

Railway Station.	*Points Served.*
Pietersburg	Haenertsburg.
Pietersburg	Waldburg and Zoetdoorns.
Pietersburg	Waterval.
Waterpoort and Mopani	Bridgewater and Parkfield.
Zeerust and Koster	Brakfontein, Bokkraal, and Millvale.
Potchefstroom	Fochville and Hoogekraal.
Klerksdorp	Ventersdorp.
Klerksdorp and Maquassi	Ottosdal, Hartebeestfontein, and Wolmaransstad.
Joubertsdal (Rustenburg)	Noord Brabant.
Middelburg (Transvaal)	Delagersdrift, Roos Senekal, and Tonteldoos.
Leydsdorp Road	Selati Valley.
Barberton	De Kaap Valley.
Douglas	Griquatown, Postmasburg, and Olifantshoek.

The provision of these facilities has undoubtedly been justified in the development which has followed, and the experience already gained in the Pietersburg district indicates that the ordinary veld roads are capable, in most instances, of supporting road motor services where the vehicles used are of moderate weight, and preferably of the pneumatic tyred "speed truck" type. Consideration is being given to the extension of road transport facilities of this nature.

6. **Road-rail System of Transport.**—The greater portion of the railways in the Union connect the more densely populated and industrial areas with the coastal towns; in addition, many hundreds of miles of branch lines have been constructed to open up agricultural districts. But large tracts of sparsely populated country still remain without connection with the main lines of communication. The Railway Administration has had, under consideration, the introduction of an effective but cheap form of transport to accelerate the development of rural areas already opened up, particularly areas which, whilst requiring rail transport, are not sufficiently advanced to warrant the expense of a 3 ft. 6 in. gauge line. With this end in view, experiments have been made with the Stronach-Dutton "road-rail," which provides a compromise between road and rail transport. The motive power is furnished by a special form of road tractor, the rubber-tyred driving wheels of which run on specially prepared wheelways outside a light rail track, whilst the load is carried in trucks running on a 16-lb. or 20-lb. tram track of 2 ft. gauge, thus eliminating the friction factor. The gripping properties of the rubber tyres of the tractor upon the prepared wheel-paths permit of a tractive effort four times greater than that of a steel-tyred wheel running upon rails. Under such conditions, a 5-ton road tractor is able to haul a load of from 40 to 130 tons on rail, the gradients being the determining factor. The underlying principle of the road-rail is that by reason of its ability to make use of steep grades and to take sharp curves, the track can, in many cases, be laid along existing roads and over road-bridges, thus obviating the necessity for the provision of an expensive independent formation, with bridges, etc.

An experimental line constructed under the Stronach–Dutton system of "road-rail" traction was opened for public traffic between Naboomspruit Station (Pretoria–Pietersburg line) and Singlewood, 20½ miles, on 22nd September, 1924. The working results are being watched with a view to comparing this system of transport with light 20-lb. railway lines constructed in an elementary manner.

§ 7. Accidents.

1. **Return of Accidents.**—The subjoined table gives the total number of persons killed or injured on the railways during a series of years, specifying Europeans and others:—

RAILWAYS—PERSONS (EUROPEANS AND OTHERS) KILLED OR INJURED IN ACCIDENTS, 1919-20 TO 1923-24.

* Twelve months ended 31st March. T = Total; E = European; O = Other.

§ 8. Passenger Fares and Goods and Live Stock Rates.

1. **Tariff Policy.**—The tariff policy of the South African Railways is governed by Section 127 of the *South Africa Act*, which provides as follows :—

> The railways shall be administered on business principles, due regard being had to agricultural and industrial development within the Union, and promotion, by means of cheap transport, of the settlement of an agricultural and industrial population in the inland portions of all Provinces of the Union. So far as may be, the total earnings shall not be more than are sufficient to meet the necessary outlays for working, maintenance, betterment, depreciation, and the payment of interest due on capital, not being capital contributed out of railway or harbour revenue.

Prior to the establishment of the Union, the Government railways of the four Provinces were administered separately, those of the Cape of Good Hope and Natal being known as the *Cape Government Railways* and the *Natal Government Railways* respectively, and those of the Transvaal and the Orange Free State as the *Central South African Railways*, subsequent to the Anglo-Boer War.

2. **Passenger Fares.**—Three classes of accommodation are provided for passenger traffic, viz., first, second, and third. In addition, special native coaches are used, the fares for which are lower than third class fares for distances over 115 miles.

The fares in operation are (*a*) ordinary, (*b*) suburban, (*c*) trip bearer, (*d*) mileage coupon, (*e*) excursion, and (*f*) season—

(*a*) First class ordinary single journey tickets taper down in cost from 2·4d. per mile to 1·09d. per mile. The cost of second class tickets is two-thirds of that of first class tickets. Third class tickets range from 1·2d. per mile to ·56d. per mile. Return fares are calculated at the single fare for the total distance, e.g. a ticket taken out for a return journey of 500 miles is equal to the single fare for 1,000 miles. Special native fares, available only by goods trains or by recognized native trains for certain specified classes of natives, vary in cost from 1·2d. to ·6d. per mile.

(*b*) Suburban fares, ordinary and season, operate in the vicinity of some of the largest towns, and are considerably lower than ordinary fares.

(*c*) Trip bearer books, comprising 20 trips (10 return journeys), or 50 trips (25 return journeys), are issued at a reduction of 10 per cent. and 14 per cent. respectively on ordinary or special suburban fares.

(*d*) Mileage coupon books are used mainly by commercial travellers and business men whose journeys are not sufficiently numerous to justify the outlay on a season ticket. Books of 500 and 1,000 coupons are issued, each coupon being good for one mile. A person using these coupons effects a considerable saving, in some instances as much as 30 per cent.

(*e*) Excursion tickets, at a single fare for the return journey, are issued during recognized holiday periods from certain inland areas to specified holiday resorts at the coast. During the summer, winter, and Easter excursions, similar single fare tickets are issued between all stations on the system.

(*f*) Week-end excursion tickets (all classes), at single fare for the return journey, are issued on Fridays from 5 p.m. and all day on Saturdays and Sundays, available to complete the return journey by midnight on the following Monday.

(*g*) Evening excursion tickets (all classes) are issued from 5 p.m. daily, at single fare for the return journey. The return journey must be commenced not later than by the last available passenger train on the day of issue.

The following reduced fares are granted to school, picnic, and pleasure parties, consisting of not less than ten scholars, in charge of one or more teachers, travelling on excursions organized by the school authorities :—

Scholars, irrespective of age.....	Half single fare, minimum 3d., for the return journey.
Teachers and adults accompanying the party...	Full single fare, minimum 4d., for return journey.

In the case of circular tours the fares are :—

Scholars, irrespective of age.....	Half single fare for half the total mileage.
Teachers and adults accompanying the party...	Full single fare for half the total mileage.

(*h*) Season tickets are issued :—
a) For travel within suburban areas ; and
b) for commercial travellers and other persons travelling over long distances.

The following are the rates for certain distances :—

UNDER (*a*).

Distance.	Weekly.		Half-Monthly.		Monthly.	
	1st Class.	2nd Class.	1st Class.	2nd Class.	1st Class.	2nd Class.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
10 miles.....	0 9 6	0 8 0	0 18 6	0 15 6	1 13 6	1 8 0
20 miles.....	0 11 0	0 9 3	1 1 9	0 18 3	1 19 6	1 13 0
30 miles.....	0 12 6	0 10 6	1 4 9	1 0 9	2 5 0	1 17 6

Quarterly tickets are issued at three times the monthly rate, less 5 per cent.
Half-yearly tickets are issued at six times the monthly rate, less 10 per cent.
Yearly tickets are issued at twelve times the monthly rate, less 20 per cent.

UNDER (*b*).

Distance.	Annual.	
	1st Class.	2nd Class.
	£	£
200 miles.....	41	33
500 miles.....	60	48
1,000 miles.....	83	66
1,500 miles.....	98	78
2,000 miles.....	113	90
3,000 miles.....	138	110
4,000 miles.....	156	125

Half-yearly tickets are charged for at three-fourths of the annual rate levelled to the nearer £1.
Quarterly tickets are charged for at one-half of the annual rate levelled to the next higher £1.

The following table gives particulars of single fares for certain distances :—

RAILWAYS—SINGLE PASSENGER FARES.

Miles.	Class of Ticket.			
	1st.	2nd.	3rd.	Special Native, 3rd.
	s. d.	s. d.	s. d.	s. d.
5.....	1 1	0 8	0 6	0 6
10.....	2 0	1 4	1 0	1 0
25.....	4 9	3 4	2 6	2 6
50.....	9 6	6 3	4 9	4 9
100.....	19 0	12 6	9 6	9 6
250.....	46 0	30 9	22 6	12 6
500.....	89 3	59 6	42 3	25 0
750.....	129 6	86 6	63 3	37 6
1,000.....	167 0	111 6	84 6	50 0
1,500.....	207 6	138 6	108 6	75 0

Oversea passengers arriving at a Union port, Lourenco Marques, or Beira, desiring to travel overland to another Union port, Lourenco Marques, or Beira, to rejoin the same or a following steamer to continue their journey beyond South Africa are granted a 20 per cent. reduction in the ordinary fares. Certificates from the shipping companies concerned must be handed in to the Administration, certifying to the boats by which the passengers have travelled or have booked to travel, and that they are entitled to the privilege under the governing conditions. An order authorizing the privilege is then issued. The reduction of 20 per cent. is also allowed for any rail journey exceeding 300 miles to passengers from overseas visiting South Africa, who hold return portions of steamship tickets from an oversea port to South Africa, or passengers from overseas en route to another country via South Africa who reimbark at port of disembarkation or any other Union port, Lourenco Marques, or Beira. For the purpose of this concession, "oversea" means north of Walvis Bay on the west and north of Beira on the east coast.

3. **Parcels Rates.**—Parcels and excess luggage are conveyed per passenger train according to weight and distance. The following are a few examples of parcels rates:—

RAILWAY PARCELS RATES.

Miles.	½ lb.	2 lb.	5 lb.	30 lb.	50 lb.	100 lb.
	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
50	0 4	0 4	0 8	1 2	1 9	2 9
100	0 4	0 8	0 10	1 9	2 4	4 2
200	0 4	0 10	1 2	3 2	4 4	7 11
300	0 4	1 1	1 6	4 4	6 4	11 4
500	0 4	1 1	2 0	6 7	9 5	17 3
1,000	0 9	1 6	3 2	10 0	14 11	26 6

Certain produce, such as bread, butter, meat, fruit, fish, eggs, etc., is conveyed at half parcels rates.

4. **Live Stock Rates.***—Large animals are classified as cattle, horses, donkeys, mules, foals, and ostriches.

Small animals are classified as calves under three months old, goats, pigs, sheep, buck, and ostrich chicks under four months old.

A minimum charge as for four head of large animals or twenty-one head of small animals per truck is levied.

RAILWAY LIVE STOCK RATES.

(A) Rate per head (large animals).
(B) Rate per 7 head (small animals).
(C) Charge per short truck of 8 large animals per mile.
(D) Charge per short truck of 49 small animals per mile.

Miles.	A.	B.	C.	D.
	s. d.	s. d.	d.	d.
100	5 9	5 9	5·52	4·83
250	11 3	11 3	4·32	3·78
500	18 7	20 7	3·57	3·46
750	24 10	28 5	3·18	3·18
1,000	27 11	31 11	2·60	2·68
1,500	£1 11	47 11	2·68	2·68

NOTE.—No higher charge is levied than as for 10 head of large animals per short truck, irrespective of the number in excess of 10 head actually loaded in such trucks. Live stock will be accepted for transport under this arrangement solely at owner's risk.

* The special provision made by the Railway Administration for the conveyance of live stock is referred to in Chapter XIII of this *Year Book*.

5. **Goods Rates.**—The rates charged for the conveyance of goods are divided broadly into four classes, viz., (*a*) Mileage, (*b*) Distribution, (*c*) Port, (*d*) Export and Coal Rates.

(*a*) *Mileage Rates.*—The following table shows mileage rates per 2,000 lb., and rates per ton per mile at certain distances for the various classes of traffic enumerated:—

RAILWAY RATES PER TON AND PER TON PER MILE FOR GIVEN DISTANCES.

Tariff No.	Examples of Commodities included in Tariff referred to.	50 Miles.	100 Miles.	250 Miles.	500 Miles.	750 Miles.	1,000 Miles.

10	" " *	·94d.	·65d.	·46d.	·31d.	·23d.	·18d.

(*b*) *Distribution Rates.*—Certain important inland towns are known as "distribution centres," from which goods may be forwarded at special "distribution" rates, thus stimulating the development of commerce in the inland towns. The broad underlying basis of the "distribution" rates is as follows: Schedule rate‡ to ultimate destination from the port governing the distribution centre, via the distribution centre, *less* the rate‡ from the same port to the distribution centre, plus cartage.

* Per ton per mile.

† Maximum rate on S.A. maize and maize meal, 20s. per 2,000 lb.; S.A. wheat, wheaten meal, and wheaten flour, 22s. 6d. per 2,000 lb.; other grain, 27s. 6d. per 2,000 lb.

‡ Excluding cartage.

(*c*) *Port Rates.*—Special rates apply from the ports to inland towns. The following are the rates from the ports shown, to Johannesburg :—

RAILWAY RATES PER TON AND PER TON PER MILE FROM CERTAIN PORTS TO JOHANNESBURG.

(*a*) Rates per 2,000 lb., exclusive of cartage.
(*b*) Rates per ton (of 2,000 lb.) per mile.

TARIFF No.	PORT AND MILEAGE.							
	Table Bay (Cape Town), 958 miles.		Algoa Bay (Port Elizabeth), 713 miles.		Buffalo Harbour (East London), 666 miles.		Point (Durban), 486 miles.

"	(*b*)	·44d.	·39d.	·37d.	·33d.	·23d.

* Temporary rate.

(2) *Bunker and Export Coal.*

Special rates are in force for export and bunker coal from all collieries to the ports. The following are a few examples of the rates charged, in pence per ton of 2,000 lb. :—

RAILWAY RATES IN PENCE PER 2,000 LB. FOR BUNKER AND EXPORT COAL.

From.	Bunker and Export.	
	To Table Bay (Cape Town).	To L. Marques.
Witbank.....	204d.	162d.

From.	To Point, Natal.	To Table Bay (Cape Town).
Hatting Spruit.....	160·5d.	206d.
Hlobane.....	171d.	207d.

Subject to such conditions and on production of such proof as may be prescribed from time to time by the Administration, a rebate is granted in respect of coal shipped as cargo oversea beyond South or South West Africa.

This rebate is also allowed on coal utilized in bunkering ships carrying export cargo-coal equal to 5,000 tons, or three-quarters of the ship's cargo carrying capacity (whichever is less) from Union ports and Lourenco Marques to places oversea beyond South or South West Africa, and provided that no cargo other than coal is loaded, subject to the following exception. The rebates are :—

Table Bay	2s. 7d.	per ton of 2,000 lb.
Point	7s. 9d.	„ „ „ „
Lourenco Marques	7s. 9d.	„ „ „ „

On the authority of the General Manager, or an Assistant General Manager, a ship, which is otherwise fully laden with export cargo coal, may be permitted to take not more than 500 tons of cargo, other than coal, without being deprived of the benefit of this rebate.

§ 9. Railway Finance.

1. **Earnings.**—The subjoined tables, (i), (ii), (iii), (iv), (v), (vi), and (vii), give particulars of earnings of the South African Railways under various headings for various years. A graph [No. (viii)] is included, showing the variations of net revenue in relation to capital :—

(i) RAILWAY EARNINGS UNDER MAIN HEADS, YEARS 1918-19 TO 1923-24.

Heads.	1918–19.*	1919–20.*	1920–21.*	1921–22.*	1922–23.*	1923–24.*

* Amount carried to distribution account.
† Represents the seven months from date of Union (31st May, 1910) to 31st December, 1910.
‡ For the year 1915 no provision for depreciation was made in working expenses, but a special appropriation of £958,497 was made to the Renewal Fund at 31st March, 1916, from the profit for the year.
§ Three months ended 31st March, 1917.
‖ Year ended 31st March.

4. **Cost of Construction.**—The subjoined table gives particulars as to the cost of construction of new lines completed since the establishment of the Union. The sixth and previous issues of this *Year Book* gave some further tables illustrating the construction of lines of standard gauge at a high and low average cost per mile, and the average cost per mile of lines of 2 ft. gauge.

The average cost per mile open of lines of 3 ft. 6 in. gauge in the Union is £8,035, and of lines of 2 ft. gauge, £2,798.

§ 10. Land Transportation : Miscellaneous.

1. **Tramways.**—All public tramways in the Union used for the conveyance of passengers now employ electric traction, those at Bloemfontein and Boksburg being of the trackless type. The tramways of Cape Town (City and Camp's Bay), Kimberley and Port Elizabeth are owned by companies ; but elsewhere are owned and controlled by the municipalities. The following are the existing tramways in operation :—

Cape of Good Hope—
Cape Town and Suburbs, Camp's Bay, East London, Kimberley and Port Elizabeth.
Natal—
Durban and Pietermaritzburg.
Transvaal—
Pretoria, Boksburg, and Johannesburg.
Orange Free State—
Bloemfontein.

The following table shows the length of routes in the case of each tramway in the Union and other particulars as to equipment, the number of employees, capital, revenue, expenditure and other matters :—

TRAMWAY SYSTEMS OF UNION, 1923-24.

3. **Roads and Bridges.***—(a) *Control and Maintenance of Roads.*—In the Province of the *Cape of Good Hope* the roads are divided into main, divisional, and public roads, in terms of Ordinance No. 13 of 1917, which delegates certain functions with regard to roads to divisional and municipal councils. Main and divisional roads in this Province comprise roads which are proclaimed as such in terms of the Ordinance referred to, or established by or under other enactments of the Cape of Good Hope, whereas public roads are those, not being proclaimed roads, over which a right-of-way exists in favour of the public. The Ordinance provides for the construction of main roads out of Provincial revenue, but divisional roads must be made by divisional councils. In both cases, however, it is the duty of divisional councils to maintain the roads, unless the expenditure or maintenance is, owing to special circumstances, beyond the resources of such councils, when the Administrator may contribute to the expenditure. Similar functions are delegated to municipal councils in regard to proclaimed roads within their control. In the case of public roads, no liability devolves upon a council to maintain such roads, but it has the power to do so. Special contributions are made out of Provincial revenue towards the maintenance of certain roads and mountain passes. In the case of roads connecting two divisions, the councils of both divisions may agree to contribute to the construction and maintenance of such roads. The Administrator of the Province has the power to proclaim roads in terms of the Ordinance or to divert or close roads, and it is the duty of councils to determine the width of roads within the area under their control. Inspectors of Roads are charged with the duty of inspecting roads, bridges, pontoons, and ferries under the supervision of the Chief Inspector of Roads.

In *Natal* the maintenance of Government roads is under the control of an Engineer-Superintendent, and the system is purely departmental. Since the establishment of the Union some 800 miles of Government roads have been constructed, the total mileage now being 6,200 miles. The average annual expenditure on main roads since the constitution of the Union, including new construction and salaries, exceeds £171,000. The total number

* Particulars of the road motor transport system of the South African Railway Administration will be found in § 6 above.

of bridges erected on main roads in the Province is 236, of which 140 have been erected between the date of the establishment of the Union and March, 1925, at an approximate cost of £551,000.

In the Province of *Transvaal* the main problem which faces the authorities relates to country roads. Owing to the large sum of money that would be necessary to undertake a comprehensive programme of road construction in the true sense of the word, it has not been possible to do more than maintain existing veld tracks in a passable state, and at the same time gradually lay down certain permanent lines of road, and harden and drain the worst sections by degrees. By these methods permanent lines of communication are gradually being established, more especially in areas where railway development has so advanced as to create certain definite market and forwarding centres.

The farming development, too, has the beneficial effect of hastening the closing of a large number of superfluous tracks, because as land becomes occupied the owner is naturally anxious to have all public roads defined, and by this means traffic is gradually being forced on to permanent lines of branch road as well as on to similar lines of more important road.

Ordinance No. 5 of 1912 takes the place of all previous laws governing country roads. The various municipal authorities have control of their own roads (under Ordinance No. 9 of 1912), but a grant is made by the Administration in respect of certain main roads which pass through municipal areas when funds are available. The one exception to the above arrangement is that of the Main Reef Road. In this case the Provincial Administration is responsible for the construction and maintenance of the road (Section 59 of Ordinance No. 9 of 1912).

Control of roads is vested in the Administrator in Executive Committee. This control is exercised through a superintendent, having district road inspectors in various areas. In each Magisterial District there is a *Road Board* appointed by the Administrator (in terms of Sections 8, 9, and 10 of Ordinance No. 5 of 1912) to assist and advise on road matters generally, thus maintaining a close connection with local requirements.

The approximate mileage of roads within the Province (exclusive of those in municipal areas) is :—

Main Reef Road	50	miles.
Main roads	6,000	,,
Branch roads	14,000	,,
Bridle paths	100	,,

For the financial year 1924–25, the expenditure on roads was £233,000.

In the *Orange Free State* the roads are divided into three classes :—Proclaimed main roads with a width of 100 feet; proclaimed district roads with a width of 100 feet, and farm roads with a width of 50 feet. These farm roads are not proclaimed, nor is any complete registration or record kept of them; they become public roads through undisturbed and uninterrupted use by the public for a period of fifteen years. Further modifications of this general principle are embodied in the *Roads Ordinance*, 1912.

No public road, whether proclaimed or not, may be closed or deviated without formal application to and the consent of the local road authorities. The construction and maintenance of such roads as are constructed and maintained in the Province is done departmentally under the supervision of the Superintendent of Roads and Local Works, who reports to the Provincial Secretary. Only the proclaimed main roads are regularly maintained. The greater proportion of the roads in the Province are the so-called veld roads, but considerable lengths of new gravel roads are constructed each year.

In 1916–17 the principle of instituting a local tax for the repair of local (mostly farm) roads was adopted. A wheel tax was introduced in 1917, the revenue from which is approximately £50,000 per year. The full amount of this tax is allocated for the repair of non-main roads by the District Road Boards. There are fifty-six such boards in the Province.

There are 4,300 miles of main roads and 6,600 miles of district roads in the Province. For the financial year 1925–26 the estimated expenditure on the maintenance of main roads was £40,000, on non-main roads £60,000, and on construction £150,500. The demand for better roads has steadily increased with the agricultural development of the Province, and the question of finding ways and means to meet the necessary expenditure has become of serious importance.

(b) *Statistics.*—The following tables show the mileage of roads and the number of bridges in the Union (excluding roads and bridges under the control of municipalities and village management boards, for which see Chapter III), together with the expenditure during a period of years :—

4. **Report of the Roads and Bridges Committee.***—This Committee, appointed in terms of Government Notice No. 164, dated the 21st January, 1925, issued its report on the 18th May of the same year. Its members were Messrs. A. D. Holmwood (Transvaal), Chairman; H. B. Jameson (Natal); J. M. Greathead (Railways); R. Glenday (Cape); C. J. M. Jordaan (Mines); and W. F. Murray (Orange Free State). Subsequently Mr. A. Head (P.W.D.) was added to the membership, and Major N. P. Swinburne (Mines) succeeded Mr. Jordaan.

Terms of Reference.—The terms of reference included the following:—

(*a*) Main, municipal, and country roads.
(*b*) Technical, legal, and financial considerations involved.
(*c*) Organization required for maintaining continuity of co-ordinated policy, procedure, and expenditure for road construction and maintenance over a considerable term of years between the various authorities concerned.
(*d*) Roads as feeders to railways.
(*e*) Roads for promoting agricultural and mining production.
(*f*) Policy and methods in vogue in other countries which might be satisfactorily adopted in the Union.

Expenditure on Roads and Bridges.—The following table shows the expenditure on roads and bridges in the four Provinces since the date of Union:—

Province.	Roads.		Bridges.	
	Revenue.	Loans.	Revenue.	Loans.
	£	£	£	£
Cape—				
Cape Provincial	2,568,488	22,792	136,320	223,869
Divisional Councils	2,855,484†	—	—	—
TOTALS	5,423,972	22,792	136,320	223,869
Transvaal	2,716,270	418,830	39,259	263,769
Orange Free State	1,066,872	478,058	77,667	200,656
Natal	2,341,017	222,629	196,441	432,516

† In addition a large amount was spent annually by Divisional Councils on construction and maintenance of roads and bridges out of loan funds and local taxation.

Road Mileage.—The total mileage of road in each Province afforded official recognition is:—

Cape	†32,500 miles.
Transvaal	20,000 ,,
Orange Free State	10,400 ,,
Natal	6,200 ,,

Report.—The Committee stated there was no question as to the need of better roads in South Africa, and in regard to this provision the Union lagged behind other countries. It was impracticable for the Provincial Administrations to provide for improved road facilities out of current local revenues; therefore to meet the demand for better roads, it was imperative that the Union Government should accept a share of the burden. If the development of a system of main roads to serve the Union as a whole be left to the Provinces, a lack of co-ordinated effort is certain to result. The solution lies in the development by the Union Government of a system of national main roads with a complete disregard of provincial and divisional boundaries. The Central Government's interest in the development of potentially productive areas would also justify it in making provision for the construction of roads to serve such areas, and to connect them efficiently with the main transport system of the country. Concurrently, there should be inaugurated by the Provincial Administrations, policies for the development of provincial main roads.

Roads throughout the Union should be classified into (*a*) National Roads, (*b*) Provincial Main Roads, and (*c*) Provincial Branch Roads.

National Roads.—These should form a primary network of roads joining up the principal centres of industry, and lead towards similar centres in neighbouring territories.

* The full report is published in the *Journal of Industries*, dated July and August, 1925.
† Inclusive of 2,300 miles in the Native Territories.

Provincial Main Roads.—These should form a subsidiary network to serve the general requirements of the Provinces in a similar manner as the national roads serve the Union.

Provincial Branch Roads.—These should embrace all other roads which the Provinces may decide to recognize as provincial roads.

Financial Responsibility.—The apportionment of financial responsibility recommended by the Committee is as follows:—

National roads should be constructed and maintained at the cost of the Union Government, while provincial main roads should be subsidized by the Union Government to the extent of one-third their cost of construction only, the other two-thirds being found by the Provinces by means of long-dated loans. Maintenance charges would be defrayed from provincial or local revenues. Provincial branch roads should be built and maintained by the authorities concerned under their own financial arrangements. The capital expenditure to be met by the Union Government on the proposed national main roads, in length approximating 5,200 miles, is estimated at £3,700,000; the maintenance charges rising from £29,600 in the second year would reach £296,000 in the eleventh and subsequent years. The Union Government's one-third contribution to the construction of 12,300 miles of provincial main roads would amount to £2,850,000, the remaining two-thirds, viz., £5,700,000, being found by the Provinces by borrowing.

The Committee laid emphasis upon the serious results which would follow from any neglect to maintain the roads efficiently after construction, and urged the need for their proper upkeep. It recommended the establishment of a permanent National Road Board to deal with the classification of roads, the consideration of road programmes, the allocation and expenditure of funds, consultation with the Railway Board, and kindred matters.

The following national main roads were proposed:—

(1) Cape Town, Paarl, Fraserburg, Hopetown, Kimberley, Fourteen Streams.
(2) Cape Town, Caledon, Mossel Bay, Port Elizabeth, Grahamstown, East London, Umtata, Kokstad, Umzimkulu.
(3) Port Elizabeth, Uitenhage, Graaff-Reinet, Middelburg, Colesberg Bridge.
(4) East London, King William's Town, Queenstown, Burghersdorp, Bethulie Bridge.
(5) Messina, Louis Trichardt, Pietersburg, Nylstroom, Warmbaths, Pretoria, Johannesburg, Vereeniging.
(6) Mafeking, Zeerust, Rustenburg, Pretoria, Witbank, Belfast, Nelspruit, Komatipoort.
(7) Fourteen Streams, Christiana, Bloemhof, Klerksdorp, Potchefstroom, Johannesburg.
(8) Johannesburg, Heidelberg, Balfour, Standerton, Volksrust.
(9) Middelburg (Transvaal), Carolina, Lake Chrissie, Oshoek (Swaziland border).
(10) Main Reef Road traversing Witwatersrand from Randfontein to Springs.
(11) Colesberg Bridge, Philippolis, Edenburg, Bloemfontein, Kroonstad, Heilbron, Viljoens Drift. The road from the Cape Province entering the Orange Free State at Bethulie Bridge would join this road at Trompsburg.
(12) Aliwal North, Rouxville, Zastron, Wepener, Ladybrand, Ficksburg, Bethlehem, Harrismith, Vrede, Delagers Drift (Transvaal).
(13) Bloemhof, Hoopstad, Ventersburg, Senekal, Bethlehem, Harrismith, Van Reenen's Pass (Natal).
(14) Kimberley, Boshof, Bloemfontein, Thaba 'Nchu, Ladybrand to Basutoland.
(15) Durban, Pietermaritzburg, Estcourt, Ladysmith, Dundee, Newcastle, Charlestown.
(16) Ladysmith to Orange Free State border at Van Reenen's Pass.
(17) Pietermaritzburg, Richmond, Ixopo, East Griqualand.
(18) Pietermaritzburg, Greytown, Mahlabatini, Nongoma, Pongola Poort (Transvaal).

CHAPTER XXI.

POSTS, TELEGRAPHS, AND TELEPHONES.

§ 1. Posts.

1. **Origin and Development of Postal Service in South Africa.**—The first record of any postal service in South Africa is in respect of the primitive system dating as far back as the beginning of the seventeenth century, when boulders on the shores of Table Bay were used by passing vessels as the repository of letters intended for collection and conveyance to their destinations by vessels proceeding in the opposite direction.

The first regular postal communication was that established by Government in 1806.

In 1860 a penny post was started in Cape Town, and in the following year it was also started in Port Elizabeth. In 1864 all places in the Colony between which mails were exchanged twice daily were given the privilege of a penny post. The first mail to the Diamond Fields was despatched from Cape Town on the 19th January, 1871.

The foundation of the South African Postal Union was laid in 1883 by means of separate Conventions entered into between several of the South African Governments. During the same year travelling post offices were first attached to trains on the railway system and the telegraphic money order system was adopted. In 1893 the administration of the Bechuanaland post and telegraph services was placed in the hands of the Postmaster-General of the Cape Colony. In 1895 the Cape Colony entered the Universal Postal Union. The first South African Postal Union Convention came into force in 1898. This secured uniformity of practice and rates of postage between the Cape, Natal, Transvaal, and the Orange Free State. The Portuguese Province of Mozambique became a party to the Union at a later date. In September, 1899, the Imperial Penny Postage (introduced in 1898) was adopted by the Cape Colony.

2. **Postal Service of the Union.**—The Union Department of Posts and Telegraphs was created on the 31st May, 1910, when the Union was constituted. The postal laws and ordinances of the four Provinces of the Union, dating from 1882 in the case of the Cape of Good Hope and Natal, from 1898 in the case of the Transvaal, and from 1903 in the case of the Orange Free State, continued to have effect until the 1st September, 1911, when the "Act to consolidate and amend the laws in force in the Union relating to the Post Office, and to impose certain charges to discourage shipping combinations" (Act No. 10, 1911) was brought into operation. The Act provides that the administration and control of the Department shall, under the Minister of Posts and Telegraphs, be vested in the Postmaster-General, who has the supervision and control of all persons in the service of the Department and all post offices and post and telegraph services. He is authorized to establish, maintain, and abolish mail services, post offices, and savings bank offices; to make and alter postal and telegraph arrangements with other postal and telegraph administrations; and to make regulations for the conduct and guidance of officers and for the conduct of any business entrusted to him, or as to the manner of exercising the powers and duties assigned to him by the Act. He may prescribe the fees, rates, or charges to be demanded or received for the conveyance of postal articles and for the transmission, conveyance, or delivery of telegrams, and for any other service rendered by the Department. The headquarters of the Department are at Pretoria. Mails are conveyed by every description of transport by the aboriginal runner, the post-cart, the modern motor-car, and the travelling (railway) post office. There are in all 1,570 posts exclusive of those conveyed by rail.

3. **Postal Facilities.**—The following statement shows the number of offices open, posting receptacles in use, and private bags in use for a series of years, also the number of inhabitants and the number of square miles to each post office:—

POSTAL FACILITIES, 1912 TO 1925.

Year.	Number of Post Offices Open.	Number of Posting Receptacles in Use (excluding those at Post Offices).	Number of Private Bags in Use.	Number of Inhabitants to each Post Office.	Number of Square Miles to each Post Office.
1912*...	2,644	894	2,785	2,308	179
1913*...	2,783	933	2,976	2,233	170
1914*...	2,451	959	3,038	2,581	193

1925†...	2,947	1,128	3,660	2,504	160

* 31st December. † 31st March.

There are 43,358 *private boxes* installed at 402 post offices in the Union, and allocated to the various Provinces as follows :—

PRIVATE BOXES IN UNION POST OFFICES.

Provinces.	Total Number of Post Boxes.	Number of Post Boxes Let.	Number of Post Offices Concerned.
Cape Province.....	12,660	8,671	155
Natal.....	5,514	4,073	60
Transvaal.....	20,040	15,114	117
Orange Free State.....	5,144	3,747	70

Private boxes are available for rental purposes at most of the large post offices and the fees vary according to size, from £1. 10s. to £3 10s. per annum for the first year and £1. 5s. to £3. 5s. per annum for subsequent years.

4. **Union Mail Matter.**—The subjoined table gives particulars of mail matter posted in the Union of South Africa and Basutoland for delivery therein during a series of years :—

MAIL MATTER POSTED IN UNION (AND BASUTOLAND) FOR DELIVERY THEREIN, 1912 TO 1924-25.

For payment elsewhere	1s. per unit of £4 or part thereof

(v) *Cable Money Orders.*—A service exists between the Union of South Africa on the one hand, and the United Kingdom and Mauritius on the other, by which remittances may be cabled to or from money order offices in those countries. The maximum amount of a cable money order is £40 and the charges in the Union are :—

(*a*) The money order commission at oversea rates, viz., 1s. for every £4 or part thereof, and

(*b*) The cost of the telegram of advice at deferred rates (unless the remitter prefers to telegraph at full rates) for telegrams addressed to the country of destination.

11. **Postal Orders.**—British postal orders of all denominations from 6d. to 21s. are issued and paid throughout the Union.

12. **Postal Drafts.**—A system of postal drafts is in force by means of which a member of the public can draw upon another at any point in the Union and South West Africa where there is a money order office for any sum up to £10. A *demand* is made by the postmaster, on a date specified by the drawer, upon the person from whom the money is to be collected. If paid, the postmaster issues a receipt and remits the amount collected to the drawer by money order. The Department's fee is 6d. for one demand and 9d. for two. The presentation of a postal draft has the same force and effect as a legal demand, and in any suit or action the production of a dishonoured draft, with the postmaster's report thereon, is taken as evidence of the facts stated in such report, unless the contrary be proved.

* Year 1st April to 31st March. Separate particulars for first three months of 1919 not available.

13. **South Africa to England Ocean Mail Service.**—The first ocean mail contract entered into (1876) provided for a regular weekly mail service, the passage between the United Kingdom and Cape Town to be completed in twenty-six days. In 1899 an agreement was concluded between the United Kingdom and the various colonies and states of South Africa for the adoption of a scheme proposed by the Cape Colony Post Office, under which the cost of the ocean mail service was borne proportionately by the participating British and South African Administrations, on the basis of the use made of it by each Administration. The Cape Colony Administration was responsible for the management of the South African ocean mail service on the basis of this agreement up to the date of Union. The present contract with the Union-Castle Mail Steamship Company had force for ten years from the 1st October, 1912, and was extended for a further two years from the 30th September, 1922, subject to a year's notice. The duration of the voyage is 16 days 15 hours in each direction, with the option of a reduction to 16 days on the voyage to Southampton on payment of an additional subsidy. The subsidy paid is £225,000 per annum, of which, however, £27,000 is paid in consideration of the mail steamers commencing and terminating their voyages at Durban instead of Cape Town. The contracting parties, on the basis of user, are the Union, Southern Rhodesia, and the Bechuanaland Protectorate. Great Britain, formerly a contracting party, withdrew on the 30th September, 1924.

Towards the end of 1924 negotiations were commenced as between the Union Government and the Union-Castle Mail Steamship Company, Limited, for a renewal of the mail contract, but owing to a disagreement, chiefly upon the question of freight rates on certain South African produce, the negotiations were temporarily suspended. On resuming early in 1925, the representatives of the Steamship Company informed the Government of their withdrawal

from the agreements reached at the previous meeting, and intimated that they were only prepared to commence discussions *de novo*. The Government, finding its endeavours to reach a settlement abortive, terminated the negotiations. Meanwhile the European mail services continue to be carried out on the basis of the expired contract, subject to one year's notice of termination on either side.

Postal communication is maintained between South Africa and Australia, India, and the Far East by means of private ships as opportunity offers.

* Year 1st April to 31st March.

14. **Experimental Air Mail Service Between Cape Town and Durban.**—On the recommendation of the Civil Air Board, the Government inaugurated an experimental Air Mail Service between Cape Town and Durban, which was operated for a period of 3½ months, i.e. from 2nd March to the 16th June, 1925, inclusive.

In coming to this decision, which met with the unanimous approval of the Press of the country, the Government felt that there were certain centres in the Union between which an Air Mail Service would be justified as a public utility, and it was desirous of making a practical demonstration in order to—

(*a*) prove the reliability and advantages of air transport;

(*b*) ascertain to what extent the public would support such a facility;

(*c*) obtain valuable statistical information respecting civil aviation in South Africa.

The existing means of communication do not permit of Durban's replying to its overseas letters the same week as received, unless the telegraph is resorted to, but the air mail enabled a reply to be dispatched the same week, thus effecting a saving of seven days.

The service, which was operated by the Union Air Force under the direction of Colonel Sir H. A. van Ryneveld, K.B.E., D.S.O., M.C., was run weekly in each direction in conjunction with the European Mail.

The initial trip was a conspicuous success. The Overseas Air Mail from the "Windsor Castle" arrived at the Wynberg aerodrome at 7.30 a.m., and five minutes later two aeroplanes left for Oudtshoorn, the first relay station, with 35 mail bags weighing 496½ lb. Owing to a following wind, the trip was completed 2 hours 40 minutes ahead of schedule time, and by 4.39 p.m. the air mail had been sorted into private boxes at Durban.

The route was originally fixed as Cape Town, Mossel Bay, Port Elizabeth, East London, and Durban, but owing to the prevalence of fog at Mossel Bay during the trial flights, it was necessary to abandon this station for an inland station at Oudtshoorn in order to ensure the regularity of the service. Arrangements were made, however, whereby air mail matter for Mossel Bay was delivered from Oudtshoorn by air, when the weather permitted, and there was sufficient mail to justify the journey.

The type of aeroplane employed was the military D.H. 9 machine, which is only capable of carrying 400 lb. of mail matter. In order to attain the utmost efficiency, the route was operated on the relay principle, two machines flying together over each section. A reserve machine was kept at Cape Town and Durban, and two machines were kept at each of the three relay stations, making ten machines in all, with an equal number of pilots.

The number of machines and pilots, however, could be reduced to half by using up-to-date commercial aeroplanes, which, with the same power unit, carry a useful load of considerably more than twice that of the D.H. 9 machines.

The following air mail fees were charged in addition to the ordinary postage:—

Letters—	
Inland	3d. per oz.
Overseas	6d. per oz.
Postcards—	
Inland	1d.
Overseas	3d.
Parcels—	
Inland	6d. per lb.
Overseas	9d. per lb.

Special air mail stamps were printed of the denominations of 1d. (red), 3d. (blue), 6d. (violet), 9d. (green), the ground design being an aeroplane in flight against a lined background.

The following particulars in connexion with the operation of the service are of interest:—

Distances flown during period 2nd March to 16th June, 1925, inclusive—

	Miles.	
Oudtshoorn to Mossel Bay and *vice versa*	1,040	
Cape Town to Durban and *vice versa*	59,210	
Total flown by air mail machines	60,250	(2 machines per trip).
Trial flights prior to the service	11,000	
Extra flights during service	20,000	
Grand Total	91,250	

Number of gallons of petrol consumed	12,562
Number of gallons of oil consumed	1,276 (approx.).
Total weight of mail matter carried	3,456 lb. 12¾ oz.

Weight of letters, postcards, and parcels carried—

Letters	2,030 lb. 10½ oz.
Postcards	67 lb. 4¾ oz.
Parcels	1,358 lb. 13½ oz.

Note.—Post cards and parcels were excluded from the service by the British Post Office.

South Africa to Great Britain.....	25,624	1,118	98
Cape Town to Durban.....	14,026	2,720	289
Durban to Cape Town.....	15,448	1,604	332
Total.....	57,418	5,509	719

15. **Average Flying Time.**—The average flying time, exclusive of stops, on the Cape Town to Durban trip was 10 hours 12 minutes over the 950 miles; including stops, 14 hours 9 minutes. The average flying time on the down trip—including stops—was 26 hours. No passengers were carried owing to the unsuitability of the military machines for this purpose.

The machines left Durban for Cape Town every Thursday afternoon, staying overnight at East London and completing the journey the next day in time to connect with the mail steamer. When the weather conditions were favourable the Cape Town–Durban trip was completed the same day, otherwise early on the morning of the second day.

The Meteorological Department provided an excellent service, whereby weather reports from thirty-five stations on the route were available to the pilots. This information gave the pilots a choice of two routes over certain sections of the airway when the weather was unfavourable. There is no doubt that the success of the service is largely due to the excellent work of the meteorologists, who voluntarily gave their services in the furtherance of civil aviation.

The various municipalities on the route loyally assisted in providing suitable aerodrome sites and in clearing and marking suitable landing grounds where necessary.

In addition to the five regular air mail stations and the Mossel Bay aerodrome, thirty-two emergency landing grounds were established and marked during the operation of service.

The scheme was given the widest publicity through the Press and by means of an illustrated pamphlet. In consequence the revenue derived from mail matter posted in South Africa exceeded expectations, but the support from overseas, doubtless owing to the tentative nature of the service, fell far short of what was anticipated.

Notwithstanding a month of abnormally bad weather in March, the air mail throughout the three and a half months period was operated with an efficiency of 100 per cent. This fine achievement, which considerably impressed the South African public, was due to the highly efficient organization of the Air Directorate and to the pilots themselves, who were imbued with a fine spirit of determination to get through no matter how bad the weather might be.

The service was discontinued on the 16th June, chiefly owing to the unsuitability of the military machines for commercial work, and to the fact that the pilots were being deprived of their military training.

The question of the development of civil aviation by private enterprise is receiving the closest attention of the Minister of Posts and Telegraphs and the Air Board.

§ 2. Telegraphs.

1. **First Lines Constructed and Development of Service.**—The beginning of telegraph construction in South Africa was in April, 1860, when a line between Cape Town and Simonstown was opened for traffic by the Cape of Good Hope Telegraph Company (Ltd.), and in 1864 a line from Cape Town to Grahamstown was completed. On the 1st July, 1873, the lines of the company were transferred to the control of the Government. In Natal, under an Act of 1863, the Government was empowered to grant a concession to a company for the construction of telegraphs, and in 1874, when the Government obtained possession of the company's lines, only one connection existed, i.e. between Durban and Pietermaritzburg, a distance of about fifty-one miles. In 1876 the line from Cape Town to the north was extended to Kimberley, and in 1879 the Cape Colony and Natal were connected telegraphically, establishing in the following year, by means of the East Coast cable, a connection between Cape Town and Europe. In 1879 telegraph offices were opened at Pretoria and Standerton, in the Transvaal; in 1885 an office was established at Barberton, and in 1886 and 1887 offices were opened along the Witwatersrand.

The telegraph lines now spread over the whole of the Union and extend northwards to the Belgian Congo, Kenya, and Uganda, westwards to South West Africa, and eastwards to Mozambique.

2. **Statistics of Working.**—The following table gives particulars regarding the mileage of line, mileage of wire, number of offices, and number of telegrams dealt with in the Union during a series of years :—

PARTICULARS AS TO WORKING OF UNION TELEGRAPHS, 1912 TO 1924-25.

* Including radio messages and cablegrams, but excluding railway service messages handed in at telegraph offices worked by the Railway Administration.
† Year 1st April to 31st March. Separate figures for first three months of 1919 not available.
‡ Decrease due to revision of statistics relative to routes on railway property.
§ Decrease due to wires now forming part of superimposed circuits.
‖ Decrease due to re-allocation of routes between Telegraphs and Telephones.
¶ Union Government telegrams paid for from 1st April, 1924; the amount of £922 represents the value of free Imperial Government telegrams.

3. **Rates for Transmission of Telegrams.**—The following are the present rates for transmission of telegrams :—

For the Union of South Africa, South-West Africa, and the districts of Lourenco Marques, Gaza, and Inhambane.. } 1s. 3d. for the first 12 words or portion thereof and 1d. for every additional word.

For transmission from Cape Town, Durban, East London, and Port Elizabeth by wireless telegraphy to ships at sea } 11d. per word.

4. **Wireless Telegraphy.**—(i) *Existing Facilities.*—Wireless stations have been established by the Department at Slangkop and Port Elizabeth (Cape) and Durban (Natal). The normal range of the Durban station is 300 miles by day and 1,000 miles by night, whilst the higher power installation at Slangkop has a range of 450 miles by day and 1,500 miles by night. These are the guaranteed ranges, but are greatly exceeded at night by both stations. Continuous attendance is provided at the telegraph offices at Cape Town and King William's Town, and arrangements have been made at the principal ports for summoning a telegraph official in case of emergency. The ports from which succour can be sent to distressed vessels are therefore in communication with the wireless stations at all times. A short-range wireless station has also been established at East London.

(ii) *Projected High-Power Station.*—In September, 1922, the Union Government entered into an agreement with the Marconi's Wireless Telegraph Company, Ltd. (England), for the erection of a high-power wireless station capable of direct communication with the United Kingdom. This agreement, together with a supplementary agreement made in March, 1923, was ratified by Parliament in terms of Act No. 11 of 1923, the schedule to which, containing the text of the agreement, was summarized in the sixth issue of this *Year Book.*

* Year 1st April to 31st March. Separate particulars for first three months of 1919 not available.

5. **Cable Service.**—The cables connecting South Africa with Great Britain, Australia, South America, India, and the Far East are owned by the Eastern Telegraph and its associated companies. There are five principal routes :—

(1) To the United Kingdom via St. Helena and St. Vincent.
(2) To Australia and the Far East via Cocos.
(3) To the United Kingdom via the West Coast station serving the Gold Coast, etc.
(4) To the United Kingdom and India via East Coast stations.
(5) To South America via Ascension and St. Vincent.

A new agreement with the Eastern Telegraph Company to run for a period of 25 years from 1st January, 1920, has been completed.

§ 3. Telephones.

1. **First Exchange and Development of Service.**—In 1882 the first telephone exchange in South Africa was opened at Port Elizabeth, followed in 1884 by the opening of a similar exchange at Cape Town. In quick succession exchanges were established at all the principal towns throughout the Cape Colony, Natal, Transvaal, and Orange Free State, until, at the 31st of March, 1925, there were 897 exchanges in existence in the Union. The largest exchange system is situated at Johannesburg, where 11,278 subscribers' lines and 496 public call offices are in use. Automatic exchanges have been established at Waterkloof (Pretoria), Camps Bay (Cape Town), Overport (Durban), Port Elizabeth, and Parkview and Rosebank (Johannesburg). The Pietermaritzburg exchange system is at present being converted to automatic. Trunk line communication for distances of approximately 500 miles has long been established, and the introduction of " repeaters " has rendered possible trunk speech between Cape Town and Johannesburg and Pretoria.* Repeaters are also in use to facilitate public speech between Johannesburg and Durban, and their installation at an early date at Bethlehem, to place the maize-growing areas of the Orange Free State in telephonic communication with Durban, is contemplated.

2. **Farm Telephone Lines.**—The Department of Posts and Telegraphs, recognising the desirability in the interests of agricultural development of the greatest possible expansion of the farm telephone system, prepared revised conditions and reduced rates for this class of service, and, assisted by a special financial appropriation of £300,000 (to be spread over two years), launched an intensive campaign of farm line development on the 1st of April, 1924. The revised conditions called for the active co-operation of the farmers in the supply of rough labour and road transport in connexion with the erection of their lines and their willingness to undertake the responsibility for the removal of ordinary line faults. The response by the farming community to the Departmentis canvass was instant and widespread, and by the end of the year the Department had completed the erection, during the twelve months, of 2,199 miles of farm telephone line serving 1,392 farmers. At the 31st of March, 1925, there was a total of 6,770 miles of farm telephone line in the Union, serving in all 3,669 farmers.

* The service was made available officially to the public on the 12th April, 1926.

3. **Statistics of Working.**—The following tables give particulars of the operation of the telephone services for a series of years :—

(i) **PARTICULARS AS TO TELEPHONE SERVICES, 1912 TO 1924-25.**

Year.	Mileage of Wire (including Spare Wire).	Number of Exchanges.	Number of Public Call Offices.	Number of Instruments in Use.	Number of Subscribers.	Approximate Number of Calls (000's omitted).	Number of Instruments per 100 of European Population.

* Year 1st April to 31st March. Separate particulars for first three months of 1919 not available.
† Union Government traffic paid for from 1st April, 1924 ; the amount of £167 represents the value of free Imperial Government services.

4. **Wireless Telephony.**—In view of the development of wireless telephony, regulations dealing with the subject of broadcasting, and also with the question of wireless experimenting, were published in August, 1923. Under these the Postmaster-General is empowered to grant licences, under certain conditions, for the establishment of a service of broadcasting wireless telephony, as well as for the installation of receiving-sets by listeners, who are required to enter into a contract with broadcasters licensed in particular areas. Receiving-set licences are charged for at the rate of 5s. per annum, and in addition prescribed charges are payable to the broadcaster. The regulations also make provision for the control and licensing of amateur wireless experimenting.

The opening on the 1st July, 1924, of a broadcasting station at Johannesburg, and the subsequent establishment of similar stations at Cape Town, Durban, and other centres stimulated the public interest in wireless telephony, as shown by the marked increase in the number of wireless licences issued.

In 1926 Radio Act No. 20 was passed by the legislative. This Act makes provision for the control of radio activities within the Union, and places the exclusive privilege of transmitting and receiving radio-telegrams under control of the Postmaster-General, who is empowered to issue licences under prescribed conditions to persons operating wireless stations, to experimenters, broadcasters, and listeners. A schedule of fees is attached to the Act, and, *inter alia*, provides for the maximum fee of £1. 15s., in respect of a listener's licence for a private residence.

§ 4. Savings Bank.

1. **Conduct of Savings Bank.**—Savings Banks are conducted by the Department at Cape Town (for the Cape of Good Hope), Pretoria (for the Transvaal, Orange Free State, Natal, and certain Northern and Eastern Cape offices). Deposits of one shilling, or any multiple of one shilling, are received, subject to a limit of £200 net in any one year ending 31st March, and £1,000 in all, excluding interest. Interest at the rate of 3½ per cent. per annum is allowed. Deposits are received at all money order offices. Any depositor may, in addition, invest in Savings Bank Certificates of £100 each up to £1,000. Interest on certificates at 4 per cent. per annum is credited to the depositor's ordinary account half-yearly.

2. **Savings Bank Transactions.**—Particulars of Post Office Savings Bank transactions will be found in Chapter XXIII.

§ 5. Civil Aviation.

The *Union Aviation Act* No. 16 of 1923, which was passed to enable effect to be given to the International Air Navigation Convention and to make provision for the control, regulation and encouragement of flying within the Union, came into force on the 1st July, 1924. The Act provides for the adoption of the Convention, and empowers (*a*) the issue of proclamations to give effect to the Convention; (*b*) the ratification of and giving effect to amendments; and (*c*) the application within the Union of any of the provisions of the Convention. Section 3 provides for the making of regulations, which cover, *inter alia*, the licensing and certificating of personnel, machines and aerodromes, the registration of aircraft, the safety and security of persons and property, the holding of accident inquiries, etc.

Section 4 provides for the appointment of a Civil Air Board to advise the Minister. Administrative matters are dealt with in the Department of the Minister of Posts and Telegraphs, and any technical assistance and advice is rendered by the Union Air Directorate

The Act gives powers of control, after issue of special proclamation, to provide for a state of war or great national emergency.

Provision is made (*a*) for the establishment and maintenance, out of any moneys appropriated by Parliament for the purpose, of aerodromes and road approaches thereto; (*b*) for the acquisition of land for this purpose, and (*c*) for land being expropriated for aerodromes, as though the acquisition were a defence purpose in terms of Section 87 of the *Defence Act* (No. 13 of 1912). Aerodromes used for public purposes must be approved or licensed.

Actions for *trespass or nuisance* against aircraft for flying over private property are barred, provided reasonable height and the rules of flight are observed, but it is laid down that damages may be recoverable for *loss or damage* by the aircraft or by articles falling from the aircraft. The Act provides for the investigation of accidents to aircraft, and empowers the detention of aircraft for breach of law or regulations.

The provisions of the Act are made applicable to all aircraft except those used for military, naval, or Government purposes, but they may be applied to Government aircraft or aerodromes by proclamation.

The administration of the Act has been assigned to the Minister of Posts and Telegraphs. In terms of Section 4 of the Act, a *Civil Air Board* has been appointed for a period of three years, with effect from 1st July, 1924, with the following personnel:—

*H. J. Lenton, Postmaster-General, Chairman;
Brig.-General A. J. E. Brink, D.T.D., D.S.O., Chief of the General Staff;
Col. Sir H. A. van Ryneveld, K.B.E., D.S.O., M.C., Director of Air Services;
Major A. M. Miller, D.S.O., M.L.A.;
G. Owen Smith, I.S.O., Commissioner of Customs and Excise;
Lt.-Col. F. R. Collins, D.S.O., Chief Mechanical Engineer, South African Railways;
W. C. van der Sterr, Director of Trigonometrical Survey; and
P. L. Lindup, Secretary.

Air Navigation Regulations for the Union, framed substantially on the lines of the British Regulations and approved by the Air Board, have been promulgated with effect from 1st July, 1924.

§6. Bureau of National Information.

Early in the financial year 1925–26 the Government decided to establish a Bureau of National Information, under the control of the Department of Posts and Telegraphs, for the purpose of collecting and disseminating information affecting the national welfare, market prices, etc. Bulletins containing this information are broadcast daily by the wireless broadcasting stations, and are telegraphed to all post offices, where they are exhibited for the information of the public.

* From 23rd April, 1926, *vice* Lt.-Col. E. A. Sturman, C.B.E., superannuated.

CHAPTER XXII.

STATE FINANCE.

A. GENERAL FINANCIAL SYSTEM OF THE UNION GOVERNMENT.

1. **Statutory Provisions.**—The financial provisions of the Constitution are to be found in Sections 117 to 133 of the *South Africa Act.* In terms of Section 117, all revenues from whatever source arising vest in the Governor-General-in-Council. The section creates a Railway and Harbour Fund, into which are paid all revenues from the administration of the railways, ports, and harbours, while further provision is made as follows: "There shall also be formed a Consolidated Revenue Fund, into which shall be paid all other revenues raised or received by the Governor-General-in-Council, and such fund shall be appropriated by Parliament for the purposes of the Union in the manner prescribed by this Act and subject to the charges imposed thereby." Further provisions relating to the financial system of the Union are those contained in the *Exchequer and Audit Act* of 1911, as amended by Act No. 31 of 1916 and Act No. 37 of 1922, and the *Public Debt Commissioners Act,* 1911, as amended by Sections 6 and 7 of Act No. 38 of 1921 and Act No. 50 of 1926. The raising of loans is governed by the *General Loans Consolidation and Amendment Act* No. 22 of 1917, as amended by Act No. 20 of 1919.

2. **Consolidated Revenue Fund.**—Under the present financial arrangements which conform to the provisions of the *South Africa Act,* as more particularly defined in the *Exchequer and Audit Act,* 1911, all revenues, except those of the Railway and Harbour Administration, are carried to the Consolidated Revenue Fund. This fund comprises the Revenue Account and the Loan Account, the former being credited with all moneys received from revenue proper, the latter with moneys derived from the raising of loans, from repayment of loans, or from the alienation of fixed property and such other moneys as Parliament may direct to be paid to that account. The charges upon the Revenue and Loan Accounts are provided for by annual appropriation Acts, and, subject to Section 26 of the *Exchequer and Audit Act,* it is only under the authority of such an Act that a withdrawal from the Consolidated Revenue Fund can take place. The section referred to provides that withdrawals to meet unforeseen and necessary expenditure not provided for in an appropriation Act or expenditure in excess of an amount so provided may be made under special warrant of the Governor-General up to an amount not exceeding in the whole £300,000.

3. **Railway and Harbour Fund.**—The revenues of the Railway and Harbour Administration are carried to a fund styled the Railway and Harbour Fund, and are appropriated for purposes of the Administration by annual appropriation Acts. A similar provision to that described above exists for meeting unforeseen or excess charges on the fund within certain limits. The Railway and Harbour Fund embraces a Capital Account and a Revenue Account, and the funds to meet capital expenditure are in the main provided by the Treasury, from the proceeds of loans raised, by way of loan to the Administration at rates of interest corresponding to those paid by the Treasury (see Chapter XX).

4. **Public Debt Commissioners.**—All trust moneys, e.g. Sinking Fund, Pension Fund, Guardians' Fund, and Post Office Savings Bank moneys, coming into the hands of the Government or the Railway and Harbour Administration, and funds held by Provincial Administrations are handed over for investment and management to the Public Debt Commissioners. The Public Debt Commissioners consist of the Minister of Finance as Chairman, *ex officio,* a member of the Railway Board, and one other member. The powers and functions of the Commissioners are governed by the *Public Debt Commissioners Act,* 1911, as amended by Sections 6 and 7 of Act No. 38 of 1921 and the *Public Debt Commissioners*

(*Amendment*) *Act*, No. 50 of 1926. The principal Act had provided that the surplus of revenue over ordinary expenditure in each year shall be paid to the Commissioners and applied by them in redemption of debt.

A very important, and (for the maintenance of South Africa's credit in the money market) very salutary, new departure is made by Act No. 50 of 1926. The above provision in regard to surplus revenue is withdrawn, and provision is made for the creation of a *General Sinking Fund*. Into this fund is to be paid from the Consolidated Revenue Account, the sum of £650,000 per annum for forty years from the commencement of the financial year 1927–28. The object of this measure is to extinguish the non-productive debt of the Union, including the cost of public works and buildings. The Treasury computes this debt to be £55,000,000 (including £12,000,000 worth of public buildings, etc.). The annual accumulation of £650,000 at 4½ per cent. interest will, in forty years, redeem 69½ millions of debt. Ample provision is therefore made in regard to the existing debt.

As regards future unproductive debt, the proceeds of certain mining leases, appropriated annually to loan funds, are estimated to be more than sufficient to cover the outlay on ordinary capital expenditure. Assuming, therefore, that during the next forty years unproductive capital expenditure is not increased through extraordinary causes (e.g. war or an abnormal series of deficits on revenue account), the General Sinking Fund will do very much more than extinguish the unproductive debt.

Provision is made in the Act for the continuance of the payment of interest by the Consolidated Revenue Account during the full period of forty years on any General Sinking Fund moneys, utilized for the cancellation of stock, due to be redeemed in a shorter period. The same procedure will be followed in respect of particular sinking funds which are fed by contributions from the General Sinking Fund.

5. **Audit.**—The audit of all the accounts of the Union Government, including those of the Railway and Harbour Administration, is conducted by the Controller and Auditor General, who reports annually thereon to Parliament. The appointment, powers, and duties of this officer are prescribed in the *Exchequer and Audit Act* of 1911 and the amending Acts of 1916 and 1922.

6. **Financial Relations between the Union Government and the Provinces.**—The powers of the Provinces are in the main defined in Section 85 of the *South Africa Act* and the *Financial Relations Act* of 1913. This latter Act has been extended and modified from time to time by Acts No. 9 of 1917, No. 6 of 1920, No. 5 of 1921, No. 5 of 1922, and No. 21 of 1924, but in the 1925 Session of Parliament an Act was passed which introduced several radical changes in the provincial position, to which detailed reference is made later. The most important duties of the Provinces are the control and administration of Education, *other than higher education* (i.e. up to University matriculation standard), Hospitals and Poor Relief, Roads and Bridges, and Game and Fish Preservation. From the date of the constitution of the Union until April, 1913, when the *Financial Relations Act* came into operation, the whole of the funds required by the Provinces were provided by grants from the Union Exchequer. The Act of 1913 was based on the Majority Report of the Financial Relations Commission, which was composed of a representative of each Province, with the Right Honourable Sir G. H. Murray, C.G.B., as Chairman. Broadly, it provided for—

(*a*) a subsidy from Union funds of one-half of the ordinary annual expenditure of the Province, subject to certain limitations as regards the annual increase in such expenditure;

(*b*) the assignment to the Province, without power of legislation in regard thereto, of the revenues derived from (i) transfer duty, (ii) liquor licences, (iii) native pass fees in Transvaal labour districts;

(*c*) the transfer to the Province, with power of legislation in regard thereto, of trading and professional licences (with certain exceptions), education fees, hospital fees, etc.;

(*d*) a special subsidy of £100,000 in each case to Natal and the Orange Free State.

As the Trading and Liquor Licence revenues in Natal were collected by the municipalities within their areas, provision was made for a special annual grant to that Province in lieu of the yield of such licence revenues to the municipalities in any year. (Under Act No. 5 of 1922 the grant was limited to £30,000 and restricted to the five years ending 31st March, 1927). As regards the capital expenditure of the Provinces, the Act provided that it should be met from funds provided by the Union Treasury upon loan at such rate of interest and redeemable within such period as may be fixed. The interest and redemption charges were to rank as ordinary expenditure of the Province for purposes of the Union subsidy. The Provinces are not permitted to borrow from any source other than the Union Treasury for capital expenditure.

In September, 1922, a Commission was appointed to inquire into and report upon the finances of the several Provinces, with the following personnel:—Messrs. W. D. Baxter

(Chairman), J. H. Hofmeyr, M.A., H. S. Scott, B.A., and Alex. Aiken, and their main findings and recommendations were that :—

(1) Payment of subsidy to the Provinces on the £1 for £1 basis was thoroughly unsound and should be abandoned.
(2) The Provincial Councils should have complete control, both legislative and administrative, of sources of revenue which were detailed and no others ; that these sources of revenue should be clearly defined and limited and should be enumerated in an Act of Parliament as their only sources of revenue.
(3) Trade and occupational licences should be uniform throughout the Union, and the rates fixed by the Union Parliament.
(4) To supplement the revenue from the sources enumerated, the Union Government should pay a subsidy to the Provinces which should take the form of a grant-in-aid of education, its amount to be determined by the number of pupils in average attendance ;
(5) The deficits of the Provinces outstanding at the date of the coming into operation of the Commission's proposed scheme should be wiped out by means of loans from the Union Government to be repaid in ten years.
(6) *Capital Expenditure.*—The existing system of financing the capital expenditure of the Provinces should be continued.
(7) School Boards in the Cape Province should be deprived of the power of raising loans.
(8) *General.*—
    (i) In the interests of the economical administration of the country as a whole there should be more co-operation between Union Government Departments and the Provincial Administrations.
    (ii) The most essential factor in economical administration is the development of local authorities with financial responsibility.
    (iii) Local authorities should be established with definite financial responsibilities in respect of education, hospitals, and roads.
    (iv) Local authorities should raise funds mainly by means of rates on immovable property.

Arising out of the report of the Commission, a further Commission was appointed in August, 1923, to investigate the matter of the State's liability for the cost of education and certain other matters in connexion with the education of European children. Its conclusion was that the Union Government should assume the whole of the reasonable cost of education up to the age of 15.

Beyond funding the deficits as recommended at (5) above, and making certain minor changes, no action was taken by the Government (under General Smuts) in regard to any of the Commission's recommendations. A new Government came into office in June, 1924, under the premiership of General Hertzog, and shortly afterwards a Conference of provincial representatives was called by the Minister of Finance (Hon. N. C. Havenga) at Durban to discuss the vexed question of financial relations.

The results achieved at the Conference have been embodied in legislation enacted during the 1925 Session of Parliament.

Briefly the changes in financial relations which have been effected as from 1st April, 1925, are as follows :—

(1) The annual subsidy to the Provinces is based on the number of European pupils in average attendance at primary and secondary schools, the grants per head being :—Cape and Natal, £14 ; Transvaal, £16. 7s. 6d. ; Orange Free State, £15. 8s. ; though in respect of the first 30,000 pupils in each Province the grant is £16. 7s. 6d. per head.

    There are other grants in respect of the various other educational activities of the Provinces, e.g. training of teachers, native education, etc.

    A special additional subsidy of £75,000 each is given to Natal and the Orange Free State.

(2) The general power of the Provinces derived under Section 85 of the *South Africa Act* to impose direct taxation, which gave rise to a large number of test cases in the courts on the validity of taxing ordinances, has been withdrawn, and the sources from which alone they may raise revenue and legislate in regard thereto are set out in the following schedule :—
    (*a*) Hospital fees and fees received in respect of such education as is within the jurisdiction of a Provincial Council.
    (*b*) Licences required for dogs outside urban areas ; licences to take, catch, or kill game, fish, or other animals ; licences to sell game ; licences to pick or sell wild flowers.
    (*c*) Licences to own or drive any motor vehicle or other vehicle propelled by mechanical power.

(*d*) Wheel tax or tax on vehicles, including motor and other mechanical vehicles.
(*e*) Amusements or entertainment tax.
(*f*) Auction dues.
(*g*) Licensing of totalizators and the imposition on the licences of a duty in respect of the takings thereof; and licences, taxes, and fees in connexion with the control, regulation, and restriction of horse and other racing, *betting and wagering, and the dissemination of information as to betting and wagering.*
(*h*) Taxes on persons other than companies and on the incomes of persons other than companies subject to certain limits.
(*i*) A tax on companies other than mutual life insurance companies.
(*k*) Tax on the ownership of immovable property.
(*l*) Licences in respect of the importation for sale within the Province of goods from beyond the borders of the Union, subject to a maximum licence duty of £310 in respect of any one importer in the Province concerned.
(*m*) Receipts of a miscellaneous nature connected with matters entrusted to a Province.

(3) The power to fix the licence fees in respect of trades, professions, and occupations has been taken over by the Union. The proceeds derived from this source will, however, be transferred to the Province, together with the proceeds of Transfer Duty, Liquor Licences, and Native Pass Fees.
(4) The power of the Natal municipalities to impose certain trading licences has been taken away and the grant in lieu to Natal provided under the 1913 Act has been abolished, as the revenue from licences will accrue to the Province in the ordinary way under the arrangement set out in paragraph (3).

B. PUBLIC REVENUE AND EXPENDITURE OF THE UNION.

§ 1. General Summary.

1. **Revenue and Expenditure of States Prior to 1910.**—The following table gives particulars regarding the revenue and expenditure of the States now forming the Union from 1881 to 1910. Railway revenue and expenditure have been excluded from the figures which have been adjusted to uniform fiscal periods (1st April to 31st March). Details of individual years will be found in the sixth and previous issues of this *Year Book* :—

REVENUE AND EXPENDITURE (EXCLUDING RAILWAY REVENUE AND EXPENDITURE) OF STATES NOW FORMING THE UNION, 1881 TO 1910 (ADJUSTED TO UNIFORM FISCAL PERIODS).

Period. (1st April to 31st March.)	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.
		(*a*) REVENUE.

2. **Revenue and Expenditure from 1910.**—The following table shows the total ordinary revenue and expenditure of the Union, including the Provinces. To maintain comparability of the figures the following adjustments to the audited statements have been made :— (i) The revenue of the Union from 1910–11 to 1916–17 excludes receipts from *Bewaarplase* transferred to the Loan Account, and the expenditure of the Union excludes subsidies to the Provincial Councils, and, in the year 1912–13, a contribution of £100,000 to the Miners' Phthisis Compensation Fund, which was a debit against the *Bewaarplase* receipts. (ii) Interest paid by the Railways and Harbours on Loan Capital, which was formerly credited to the Consolidated Revenue Fund, has been credited direct to the Public Debt Commissioners since 1923–24, and has been deducted from both Revenue and Expenditure, and shown separately. Owing to this change the figures are undoubtedly a better guide to the public expenditure of the country. The figures for previous years have been subtracted in all the tables following.

UNION OF SOUTH AFRICA—REVENUE AND EXPENDITURE (INCLUDING PROVINCIAL), 1910–11 TO 1923–24.

§ 2. Revenue of the Union.

1. **Ordinary Revenue of the Union.**—The total ordinary revenue of the Union from the date of the establishment of the Union is given according to financial years (1st April to 31st March) in the subjoined table, together with the revenue per head of the total population and per head of the European population only. The ordinary revenue is taken to exclude railway and harbour revenue, and (from 1st April, 1913) collections of revenue on behalf of Provincial Administrations. Receipts from *bewaarplase*, a source of revenue resulting from certain Government ownership rights in respect of gold mines in the Transvaal, have been excluded for the years up to 1920–21 and for the year 1923–24, as revenue under this head had been transferred to Loans Account for these years.

* From 1st June, 1910. Particulars of individual years from 1910–11 to 1919–20 will be found in the sixth issue of this *Year Book*.
† A complete statement of Union revenue derived from mining will be found below.
‡ See footnote No. 3 of following table.
§ Railway interest included for comparative purposes.

2. **Sources of Revenue.**—The ordinary revenue of the Union is derived from (*a*) Receipts from Customs and Excise, (*b*) Collections by the Inland Revenue Department under various heads, including income tax payments, taxation of mines, stamp, transfer, and other duties, and Native taxes; and (*c*) Revenue earned by the Postal, Telegraph, and Telephone services of the Union. The revenue receipts under the main heads are given below for six financial years (1st April to 31st March).

5. **Revenue from Mining.**—Particulars of the sources of revenue from mining in the Union are given hereunder for six financial years (1st April to 31st March). A special War levy of £500,000 on the profits of gold mining was imposed under the *Mining Taxation Amendment Act*, 1915. The first instalment (2½ per cent. on the profits) yielded in the financial year 1915–16 the sum of £301,186, and the balance was paid in the financial year 1916–17.

* In terms of Section 3 (*d*) of Act No. 22 of 1917.

6. **Income Tax Act.**—The collection of income tax is now governed by the *Income Tax Act*, No. 40 of 1925, as amended by Act No. 36 of 1926. The Act of 1925 consolidated and amended the previous Act of 1917 as amended by the subsequent Acts of 1919, 1920, and 1921. The principal change introduced is the repeal of the dividend tax, the yield of taxation being maintained by a corresponding increase in the rates of normal tax chargeable upon companies.

Under the Act of 1926 the primary abatement allowable to married persons has been raised from £300 to £400.

The taxes imposed for the year 1926 are :—

A. Normal Tax. B. Supertax.

Returns under the Act (as now amended) are required as follows :—

A. In respect of normal tax from—

(*a*) every married person, or representative of such person, whose income for the year of assessment exceeded £400 ;

(*b*) every unmarried person, or representative of such person, whose income for the year of assessment exceeded £300 ;

(*c*) the public officer of every company, the income of which for the year of assessment exceeded £300 ;

(*d*) every person to whom a form of return is issued, irrespective of the income of that person for the year of assessment in question.

The general provisions of the principal Act (as amended from time to time) apply each year to the determination of the taxable amount upon which the tax is to be levied and

the collection of the amount payable in respect of that taxable amount, but the actual rates to be levied are fixed each year by Parliament in respect of the year of assessment ending on the 30th June of that year. Provision is further made that the rates so fixed shall be applicable to any *interim* assessment made in respect of the following year of assessment, subject to adjustment when the next annual determination of rates is made.

(i) *Rates.*—The rates for the year of assessment ended 30th June, 1926, are :—

A. NORMAL TAX.—In respect of each taxable amount (as defined below)—

(*a*) in the case of gold and diamond mining companies, for each pound of taxable amount, *three shillings ;*

(*b*) in the case of all other companies, for each pound of taxable amount, *two shillings and sixpence ;*

(*c*) in the case of persons other than companies, for each pound of taxable amount, *one shilling* and as many *two-thousandths of a penny* as there are pounds in that amount, subject to a maximum rate of *two shillings* in every such pound.

These rates are subject to the provisos—

(1) that when any portion of the taxable amount of a company is due to the inclusion in its taxable income of any debenture disallowed as a deduction under Section 13 (*a*) of the Act, the rate of tax in respect of that portion of the taxable amount is *two shillings* for each pound of that portion ; and

(2) that when any portion of the taxable amount of any company is derived from or relates to the business of life assurance, including the sale of annuities, the rate of tax in respect of that portion is limited to *one shilling and sixpence* for each pound of that portion.

B. SUPERTAX.—In respect of each taxable amount (as defined below)—
for each pound of such taxable amount, *one shilling* and as many *five-hundredths of one penny* as there are pounds in that amount, subject to a maximum rate of *five shillings* in every such pound.

(ii) *Taxable Amounts.*—The *Income Tax Act* of 1925 (as amended by Act No. 36 of 1926) defines the taxable amounts in respect of each tax as follows :—

A. NORMAL TAX.—The taxable amount of any income is the amount remaining after deducting from the taxable income such of the abatements set out below as are applicable. (NOTE.—A taxable income is the amount remaining after deducting from gross income, that is, all receipts other than those of a capital nature, all exempted amounts, and all admissible deductions other than abatements.)

Abatements—

I. In the case of any person other than a company :—

(1) (*a*) a sum of—

(i) £400 in the case of every person to whom paragraph (2) (*a*) below is applicable ;

(ii) £300 in the case of every person to whom paragraph (2) (*b*) below is applicable,

as the case may be ;

(*b*) any sum not exceeding £50 paid by the taxpayer during the period in respect of which a return is made as premiums upon policies under which he, his wife, or his minor children * is or are insured against death, accident, or sickness ;

(*c*) any fees or subscriptions, not exceeding £10 in the aggregate, paid by the taxpayer to any benefit or friendly society during any period in respect of which a return is made ;

(*d*) a sum of £60 for each child* ;

(*e*) a sum of £30 for each dependant of the taxpayer.

"Dependant" means—

(i) any person incapacitated by old age, infirmity, or any other reason satisfactory to the Commissioner from maintaining himself ; and

(ii) any child (other than the child* or step-child of such taxpayer) to whose maintenance during the year of assessment the taxpayer has contributed, whether in cash or otherwise, to an amount of not less than £30.

* "Children" includes step-children and children adopted under the *Children's Protection Act*, No. 25 of 1923. Such children must have been maintained by the taxpayer in the year of assessment, and include only those who were under eighteen years of age on the last day of the year of assessment, or would have been under eighteen years had they lived.

(2) The total of the allowances applicable to any person is subject to reduction as follows :—

(*a*) In the case of every person who—

(i) during any portion of the period in respect of which the assessment is made was married ; or

(ii) during the whole of the period in respect of which such assessment is made, was widowed or divorced, but maintained a child * during any portion of that period,

the reduction shall be by one pound for every completed ten pounds by which the taxable income of such person exceeds six hundred pounds :

Provided that in the case of any married person who was separated under a judicial order or written agreement throughout the period in respect of which the assessment is made or lived apart from his spouse throughout that period and did not contribute to her support and did not maintain during any portion of that period a child*, the reduction of the total of the allowances applicable shall be as follows :—

(*b*) In the case of all persons to whom paragraph (*a*) of this sub-section does not apply, the reduction shall be by one pound for every completed pound by which the taxable income of any such persons exceeds three hundred pounds.

II. In the case of companies the abatement is £300, subject to reduction as provided in paragraph (2) (*b*) above.

III. In any case in which the period assessed is less than one year, the total of the allowances applicable other than insurance premiums and fees or subscriptions to benefit or friendly societies *actually paid* during the period assessed is proportionately reduced.

Exemptions.—Section 10 of the *Income Tax Act* of 1925 provides for certain exemptions, e.g. revenues of the Government of the Union and Provincial Administrations and other local authorities of the Union, revenues of foreign States, revenues of the Imperial Government and of the Governments of the British Dominions, Colonies, and Possessions (other than revenues derived by the last-named Governments from any trade carried on within the Union) ; receipts of building and friendly societies ; receipts of ecclesiastical, charitable, and educational institutions of a public character ; receipts (other than income from investments) of mutual life assurance societies and companies and associations dealing only with their own members ; war pensions and miners' phthisis awards ; interest on tax-free loans, on deposits in the Post Office Savings Bank, and on Union Loan Certificates ; interest on Government loans when received by persons non-resident in the Union ; salaries paid to the Governor-General and his staff, and the representatives of foreign and other British Governments (other than Union residents not merely stationed in the Union for the purpose of carrying out such duties) ; dividend and debenture interest received from companies chargeable with or exempt from the normal tax and profits of mining exempted from taxation under the Gold Law of the Transvaal.

B. SUPERTAX.—The taxable amount for supertax purposes is the amount remaining of the income subject to supertax after allowing an abatement of £2,500, diminished by one pound for every pound by which the income subject to supertax exceeds £2,500. The abatement thus ceases to exist where the income subject to supertax amounts to £5,000 or upwards.

The income subject to supertax is an aggregate of—

(*a*) the taxable income of the taxpayer as determined for the same year of assessment for normal tax purposes ;

(*b*) any dividends or debenture interest derived from sources within the Union which were excluded in determining that taxable income ;

(*c*) any bonus shares or debentures or other securities awarded to the taxpayer during the year of assessment as the capitalization of the profits of any company in which he was a shareholder ;

(*d*) any amount allocated to the taxpayer by the Commissioner, representing his share of the undistributed profit of a private company.

Deductions.—From the aggregate so determined may be deducted expenditure other than capital expenditure connected with the dividends, debenture interest, or bonus shares included in the aggregate, and any loss assessed for normal tax purposes.

* See note on page 760.

(iii) *Summary of Assessments—All Income Tax.*—The subjoined table gives the number and value of assessments of income tax under the various Acts named.

7. **Death and Succession Duties.**—Act No. 29 of 1922 makes provision for a duty to be levied in respect of the estate of every person dying on or after 1st July, 1922. From 1st July, 1925, estate duty is charged, under Act No 31 of 1925, at the following rates :—

Dutiable Amount.	Rate per cent.	Dutiable Amount.	Rate per cent.
Up to £2,000	½	£35,000–£40,000	9
£2,000– £3,000	1	£40,000–£45,000	10
£3,000– £7,500	2	£45,000–£50,000	11
£7,500–£10,000	3	£50,000–£55,000	12
£10,000–£15,000	4	£55,000–£60,000	13
£15,000–£20,000	5	£60,000–£65,000	14
£20,000–£25,000	6	£65,000–£70,000	15
£25,000–£30,000	7	£70,000–£75,000	16
£30,000–£35,000	8	£75,000 and over	17

The Act further provides for the levy, in the case of any person becoming entitled to property, of a succession duty as follows:—

Degree of Relationship of Successor to Predecessor.	Rate of duty upon Dutiable Amount of Succession.
	Per cent.
Where the successor is the direct descendant or ascendant of the predecessor	2
Where the successor is the brother or sister of the predecessor	4
Where the successor is the descendant of the brother or sister of the predecessor	6
Where the successor is otherwise related to the predecessor or is a stranger in blood or is an institution	10
Where the successor is married to a person related by blood to the predecessor the rate of duty chargeable shall be determined by the relationship of whichsoever of the two spouses is more nearly related to the predecessor.	

Provision is made for the valuation of the property when the succession consists of limited interests therein, and for the refund of a proportionate amount of the duty paid should the succession lapse and the interest pass to another. The following are exempt from succession duty:—

(*a*) Any succession accruing from any predecessor to his surviving spouse;

(*b*) any succession accruing to any public institution of a charitable, educational, or ecclesiastical nature, or required to be devoted wholly to charitable, educational, or ecclesiastical purposes of a public nature or accruing to a public institution, which has for its purposes the advancement of science or art;

(*c*) any succession accruing to any provincial administration or municipality or other local authority.

The following table shows the amount collected in death duties during each financial year 1918–19 to 1923–24.

DEATH DUTIES COLLECTED DURING THE YEARS 1918–19 TO 1923–24.

Year.	Estate Duty.				Succession Duty.				Total.

Insurance Policies	284,755
Limited Interests in Property	506,326
Cash in Hand and at Bank	814,908
Stock in Trade, Goods, Live Stock, and other Movable Property	570,729
TOTAL VALUE OF ASSETS	£6,831,868

8. **Native Taxes.**—Hut tax is levied on natives in the Cape of Good Hope at 10s. per hut, in Natal at 14s. per hut, and in a small area of the Orange Free State at £1 per hut. In the Transvaal there is a poll tax of £2 levied annually on each adult male native, with a further tax of £2 per wife on every native with more than one wife. Native farm labourers and natives in municipal locations are allowed a reduction of £1 each in respect of their tax liability. In the Orange Free State there is a poll tax of £1 levied annually on each adult coloured person. The subjoined table gives the total amount collected from natives in the various Provinces during the financial year 1923–24.

HUT TAX AND POLL TAX COLLECTIONS, FINANCIAL YEAR 1923–24.

Tax.	Province.				
	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.

TOTAL £	130,318	231,481	454,122	82,115	898,036

Under the provisions of the *Natives Taxation and Development Act*, No. 41 of 1925, which consolidated the various pre-Union and Union laws relating to the taxation of natives in the different Provinces, a general tax of one pound (£1) sterling is levied upon every male adult native who is domiciled in the Union, or who has resided in the Union for a period of twelve months, and, in addition, a local tax of 10s. is imposed upon the occupier of every hut or dwelling in a native location in the Union, unless the occupier is the owner of an allotment of land held under quitrent title in the location in which the hut or dwelling is situated.

One-fifth of the general tax, together with any local tax or native quitrent collected in respect of any area not falling within the jurisdiction of certain named councils or boards, is paid into a special account called the "Native Development Account." These amounts are applied to the maintenance, extension, and improvement of educational facilities amongst the natives, and for the further development and advancement of their welfare. The Act has effect as from the 1st January, 1926.

9. **Land Revenue.**—A brief summary of the land revenue system of each Province is given hereunder :—

(a) *Cape Province : Quitrent.*—Quitrent in the Cape Province is payable under numerous Acts. In many cases the Acts only remain in force so far as the provisions might affect the titles granted under such Acts. The principal Acts under which land has been disposed of by Government subject to quitrent are : Act No. 2 of 1860 (repealed), Act No. 14 of 1878 (repealed), and Act No. 15 of 1887 (in force). Generally, the quitrent, which is fixed by contract, is based on the value of the land or purchase price. In many cases the quitrent is fixed by sale at public auction. Owing to the varying system of fixing the quitrent, the rates per morgen, or even a series of rates, are incapable of classification. Anomalous and unaccountable variations exist. In certain areas the quitrent works out at a fraction of a penny per morgen and in other parts at a possible £1 per morgen. Quitrent may be redeemed at 15 or 20 years' purchase (as the case may be). The redemption charge is the purchase price, and the quitrent payable is approximately 5 per cent. interest on such purchase price. Quitrent is payable in advance, in arrear, and at different times throughout the year, according to the terms of grant.

Native quitrents yield approximately £20,000 per year. The minimum quitrent for an allotment is 15s. and the average 30s. per annum.

(b) *Natal : Quitrent.*—The quitrent is fixed in terms of grant according to a rate laid down by Proclamation or according to the value of the land. In some cases it is fixed according to the highest tender or purchase price. Quitrent is redeemable at 15 or 20 years' purchase, and most of the quitrent has been redeemed. On all unoccupied farms

granted under Proclamation of 7th July, 1856, a non-occupation tax of four times the amount of quitrent is imposed. In the districts of Vryheid, Utrecht, and Paulpietersburg (old Transvaal districts) the following land tax is in force (Act No. 31 of 1907) :—

Freehold Farms.—Annual quitrent at the rate of $3\frac{1}{5}$ pence for every 100 morgen or portion thereof.

Quitrent Farms.—Annual quitrent of 1s. 6d. for every 100 morgen or portion thereof.

Erven—Paulpietersburg.—Annual tax of 10s. per erf on alienated erven.

All quitrent is payable at a fixed time, viz., 31st December. In recent years a quitrent has not been imposed in respect of the sale of Government lands.

(c) *Transvaal : Land Tax.*—In the Transvaal a direct land tax on all farms situate in the Province is levied. The rate is fixed according to the extent, and no account is taken of the value of the land. Two forms of tenure exist, viz. :—

Quitrent.—The annual rate is 1s. 6d. per 100 morgen or portion thereof for surveyed farms, and in respect of unsurveyed farms 30s. for a whole farm or portion more than half, and 15s. for a half portion or less.

Freehold.—The annual rate is 10s. for a whole farm not exceeding 3,750 morgen (an additional 2s. 6d. per 100 morgen being paid for any extent in excess of 3,750 morgen) and 5s. for a half farm (which is not more than 1,875 morgen), or for any portion less than half.

The annual tax payable in respect of a portion of a quitrent farm in extent 100 morgen is 1s. 6d., and in respect of the same extent of a freehold farm 5s. If the registered owner is domiciled in foreign parts (i.e. outside the Union) the land tax in respect of quitrent farms is doubled. The tax is due and payable on or before the 1st July of each year. A proportionately large amount of arrear taxes exists. This is due in many instances to the land being derelict, the whereabouts of the owners being unknown.

(d) *Orange Free State : Quitrent.*—This so-called quitrent, established in terms of Chapter LXIX of the Orange Free State Law Book, is a direct land tax payable in respect of every farm in the Province and the rate is 2s. per 100 morgen or portion thereof. The area of unsurveyed farms is estimated according to the report of the Land Commission on original inspection. An additional amount of £5 per annum is payable on each farm belonging to persons resident outside the Union which is not occupied. Quitrent is payable on the 31st December in every year, and if not paid by the 31st March following, a fine equal to the amount in arrear is imposed (section 14 of Chapter LXIX). This provision greatly facilitates collection and consequently there are very few arrear taxes.

(e) *Statistics of Land Revenue.*—The statement hereunder shows the annual amount of land revenue collected from the year 1913–15.

LAND REVENUE COLLECTED IN VARIOUS PROVINCES, 1913–15 TO 1925.

Year Ended 31st March.	Cape.	Natal.	Transvaal.	Orange Free State.	Total.
	£	£	£	£	£
Average—					
1913–15	102,291	3,890	18,550	15,575	140,306
1916–20	110,209	3,565	20,160	16,131	150,065
Year—					
1921	105,124	3,044	20,169	16,082	144,419
1922	121,696	3,397	17,846	15,910	158,849
1923	117,829	3,006	21,141	16,695	158,671
1924	134,361	2,960	18,986	17,271	173,578
1925	130,571	3,399	20,045	17,213	171,228

The nature of the imposition in the Transvaal and Orange Free State enforces a complete registration of all owners of land.

Excluding Transfer Duty, which is a tax upon the acquisition of fixed property, the revenue derived directly from land in the Union is approximately 1 per cent. of the total inland revenue.

10. **Postal Revenue.**—Particulars are given below of postal receipts and telegraph and telephone revenue in the Union for six financial years (1st April to 31st March):—

UNION POSTAL REVENUE, FINANCIAL YEARS 1918-19 TO 1923-24.

* Includes £25,000 for Relief of Distress.

C. REVENUE AND EXPENDITURE OF PROVINCES.

§ 1. Financial System of Provinces.

1. **General.**—There is a provincial revenue fund in every Province, into which all revenues raised or received by the Province are paid. Appropriations are effected by Ordinance of the Provincial Council. It is only under the authority of such an Appropriation Ordinance that any withdrawal from the fund can take place. The provincial accounts are audited in each case by an auditor appointed and paid by the Union Government.

With the approval of the Treasury, a provincial administration may borrow during any financial year such sum as may be required to meet a deficit in the provincial revenue fund.

§ 2. Ordinary Revenue of Provinces.

1. **Sources of Revenue.**—From the date of Union (31st May, 1910) until the 31st March 1913, after which date the *Financial Relations Act*, No. 10 of 1913, became operative, the provincial expenditure was met from subsidies issued by the Union Government [see Section A (6) of this Chapter]. From the 1st April, 1913, until the 31st March, 1925, the Union Government contributed an annual subsidy amounting, broadly speaking, to one-half of the ordinary expenditure for the year, though the grant was curtailed from 1921. In the case of Natal and the Orange Free State a special annual grant was provided for by Section 5 (i) (*b*) of the Act above mentioned, under which each of these two Provinces received £100,000 in addition from the Union Treasury. Certain other sources of revenue within each Province were made available from the 1st April, 1913, particulars of which are contained in the tables relating to revenue collections (par. 3 hereunder).

Under the *Provincial Subsidies and Taxation Powers (Amendment) Act* of 1925, which became effective on the 1st April, 1925, the sources of provincial revenue were restricted to (i) a subsidy from the Union Government based on the number of pupils and students in average attendance at educational institutions within the Province; (ii) certain revenues collected by the Union Government and transferred to the Provinces, e.g. Transfer Duty, Native Pass Fees, Liquor Licences, and Trading, Professional, and Occupational Licences; (iii) a specified list of taxes or fees [see Section A (6) of this Chapter], in regard to which the Province has full legislative powers.

In the Transvaal a special source of revenue exists in the pass fees paid by natives. In the Cape, Natal, and Transvaal Provinces there are taxes on totalizators The Cape, Natal, and Orange Free State Provinces obtain revenue from an entertainments tax, and in the Natal, Transvaal, and Orange Free State Provinces some revenue is derived from auction dues. In the Cape Province a considerable revenue is obtained from the property tax. With these exceptions the revenue collected may be grouped under the main heads of (*a*) transfer duty, (*b*) liquor licences, (*c*) general licences, including trading and vocational licences, motor licences (except in the Transvaal, where the enactment was declared *ultra vires*), and various other licences, including those for dogs, game, and fisheries; and (*d*) miscellaneous departmental receipts, of which school and educational fees make up a considerable part, and hospital fees some further part.

The following statement gives a conspectus of legislation bearing upon the various forms of taxation adopted in each Province from time to time, as well as particulars of the incidence of each tax. Trading and other licences in operation in the different Provinces are enumerated in detail in Chapter XX (§ 8) of this *Year Book*.

PARTICULARS OF PROVINCIAL TAXATION.

Designation of Tax.	Particulars.
Auction Dues.....	*Natal.*—Addition of ¼ of transfer duty on land on every sale. Duty of ½ per cent. of purchase price on every sale of movable property by auction. Property of Imperial and Union Governments and of Provincial Administrations are exempted, and also sales of produce and dead meat held in public markets of boroughs or townships (*Ordinance No.* 13 *of* 1921 as amended by *No.* 1 *of* 1924). *Transvaal.*—1 per cent. on amount of each sale of fixed property or lease, and agricultural and pastoral produce (including meat), and 2½ per cent. on amount of each sale of all other produce (*Ordinance No.* 9 *of* 1923). *Orange Free State.*—1 per cent. on amount of each sale of immovable property and 2 per cent. on each sale of movable property (*Ordinance No.* 15 *of* 1921). Wool exempted under certain circumstances (*Ordinance No.* 13 *of* 1922).

PARTICULARS OF PROVINCIAL TAXATION—*continued.*

Designation of Tax.	Particulars.
Bachelor Tax†.....	*Transvaal.*—Poll tax of £1 on every adult unmarried male (other than a native) and every widower without minor child or children; persons paying house tax and students exempted (*Ordinance No.* 19 *of* 1917). *Ordinance No.* 16 *of* 1918 altered rate to £2 on those over twenty-five years old. Repealed by *Ordinance No.* 16 *of* 1920; but see "Poll Tax" below.
Betting and Racing Taxes (a) *Bookmakers*	*Cape.*—Annual registration fee of £5 and £50 per annum for business conducted at Tattersall's, £2. 2s. for each race meeting, and 5 per cent. of winnings on each race, or if at a racecourse, on winnings for race meeting; 5 per cent. of winnings of bets, payable by bettor (*Ordinance No.* 8 *of* 1921). *Natal.*—½ per cent. of winnings on each day; ½ per cent. of winnings of each bet, payable by bettor (*Ordinance No.* 17 *of* 1922). *Transvaal.*—5 per cent. of gross losings, to be paid by bookmaker, in certain cases 2½ per cent. (*Ordinance No.* 26 *of* 1925).
(b) *Totalizators*.....	*Cape.*—40 per cent. of amount of commission received by licence-holder: commission of latter must not exceed 10 per cent. of gross takings (*Ordinance No.* 8 *of* 1914). *Natal.*—6¼ per cent. of total amount paid in, 3 per cent. when total is less than £1,000 (*Ordinance No.* 12 *of* 1918 as amended by *No.* 7 *of* 1921). *Transvaal.*—4½ per cent. of gross takings and 2 per cent. on undistributed profits (*Ordinance No.* 4 *of* 1921).
(c) *Admission to Race-courses*	*Transvaal.*—20 per cent. of all payments for admission to a racecourse (*Ordinance No.* 18 *of* 1917).
Companies (Provincial) Tax	*Cape.*—1s. for every £100 of market value of paid-up share or debenture capital on all companies registered or carrying on business in the Province. Where the company carries on business outside the Province, the taxable capital is proportioned to the extent of its business in the Province. (*Ordinance No.* 17 *of* 1920). *Transvaal.—Financial Companies:* 1s. for each £1 of dividend distributed. *Other Companies:* 6d. for each £1 of taxable income. Minimum £5 annually. (*Ordinance No.* 8 *of* 1923 as amended by *No.* 23 *of* 1925).
Persons and Companies Tax.	*Orange Free State.—Persons:* £1 on all married adults (excluding married females) and in addition 20 per cent. of income tax payable in previous year in respect of income derived from sources within the Province, and in case of unmarried persons, 50 per cent. additional. £1 on unmarried persons not income tax payers. Widowers, widows, and divorced persons supporting minor children, and an unmarried person who is the sole support of a parent, are regarded as married. The tax is applicable to all income tax payers deriving income from the Province, whether resident in the Province or not. *Companies:* £5 on a company whose taxable income derived from sources within the Province is less than £200. *Other Companies:* 6d. for every £1 of taxable income derived from sources within the Province. *Exemptions* in cases of females whose taxable income is less than £100, students, natives, coloured persons, lepers, lunatics, and indigents, and in cases of taxable income derived from mining, and taxable income of insurance companies which is distributed among policy holders (*Ordinance No.* 12 *of* 1925).
Crayfish Canning Profits Tax†	*Cape.*—10 per cent. of the profits of any person carrying on the business of crayfish canning within the Province. (*Ordinance No.* 22 *of* 1921, repealing *Ordinance No.* 18 *of* 1920, which imposed a tax of 3 per cent. on 80 per cent. of gross turnover of companies carrying on business of canning crayfish within the Province).
*Education Tax**†	*Orange Free State.—Male adults, Companies, Associations, and Societies:* £1 on the first £100 of taxable income, 15s. on the second £1^ and a uniformly increasing rate on each successive £100 of taxable income beginning at 1d. in the £1 and increasing for each £100 by ½d. until a maximum rate of 1s. is reached at a taxable income of £4,600, above which a uniform rate of 1s. is charged. *Unmarried females:* 15s. on first £100, 10s. on second, and same rates as in the case of males above £200 (*Ordinance No.* 11 *of* 1921. Repealed by *Ordinance No.* 12 *of* 1925, which imposed a "Persons and Companies' Tax.")
Employers' Tax.....	*Transvaal.*—£1 for every person over the age of 16 above eight employed by any individual company, partnership or institution having a taxable income, children of employer excluded. Hospitals, ecclesiastical, charitable and educational institutions, and local authorities are exempt (*Ordinance No.* 8 *of* 1922).
Entertainment Tax.....	*Cape.*—Tax for every payment not exceeding 6d., 1d.; 1s. 6d., 2d.; 3s., 3d.; 5s., 6d.; 7s. 6d., 9d.; 10s., 1s. Exceeding 10s., tax is 1s. for every succeeding 10s. or part thereof (*Ordinance No.* 5 *of* 1918). *Natal.*—Tax for every payment not exceeding 6d., 1d.; 1s., 2d.; 1s. 6d., 3d.; 2s., 4d.; 2s. 6d., 5d.; 3s., 6d.; 4s., 9d.; 5s., 1s. Exceeding 5s., tax is 6d. for every succeeding 2s. 6d. or part thereof (*Ordinance No.* 11 *of* 1917, amended by *No.* 9 *of* 1920 and *No.* 7 *of* 1921). *Orange Free State.*—Tax for every payment not exceeding 6d., 1d.; 1s., 2d.; 1s. 6d., 3d.; 2s., 4d.; 3s., 6d.; 5s., 1s.; 7s. 6d., 1s. 6d.; 12s. 6d., 2s. Exceeding 12s. 6d., tax is 2s. 6d. for first 12s. 6d. and 2s. for every succeeding 10s. or part thereof, with certain exemptions where proceeds are devoted to charitable and educational purposes (*Ordinance No.* 6 *of* 1917, amended by *No.* 6 *of* 1921 and *No.* 9 *of* 1925). *Ordinance No.* 6 *of* 1922, added that in certain circumstances the tax might take the form of a lump sum, based on gross takings; the amount of the tax to be 15 per cent. of the gross takings.

* Compare Transvaal Poll Tax and Cape and Transvaal Companies Tax. † Repealed.

PARTICULARS OF PROVINCIAL TAXATION—*continued.*

Designation of Tax.	Particulars.
Betting and Racing Taxes (continued)—	
*Excess Profits Tax**.....	*Transvaal.*—1/5th of the excess profits duty as assessed under the *Income Tax Act*, 1917, imposed for one year (*Ordinance No.* 22 *of* 1917).
*Gold Profits (Provincial) Tax**	*Transvaal.*—1 per cent. on profits derived from the production of gold where the profits exceeded 10 per cent., but did not exceed 15 per cent of the gross revenue, and 1/10th of 1 per cent. additional tax for each 1 per cent, profit above 15 per cent. to a maximum of 4 per cent. when the percentage of profits to gross revenue amounted to 45 per cent. (*Ordinance No.* 14 *of* 1918). Lapsed in terms of Union Act No. 5 of 1921 on 31st March, 1922.
*House Tax**.....	*Transvaal.*—5s. per room on all occupied dwelling-houses excluding hospitals, boarding-houses, or hostels of schools, and occupied exclusively by natives, or by widows or single women not liable to income tax. (*Ordinance No.* 19 *of* 1917 as amended by *Ordinance No.* 16 *of* 1918). Repealed by *Ordinance No.* 16 *of* 1920.
Immovable Property Tax.	*Cape.*—½d. per £1 of the amount of the taxable value of all immovable property. Certain exemptions, chiefly relating to public bodies. (*Ordinance No.* 6 *of* 1918).
*Increment Value Duty**..	*Transvaal.*—5 to 25 per cent. on profit accruing from sale, cession, exchange donation, grant, or any other disposal of fixed property. A rebate of 2½ per cent. for each year from date of acquisition (*Ordinance No.* 5 *of* 1919). Repealed by *Ordinance No.* 7 *of* 1920.
Motor Tax.....	*Cape.*—See "Wheel Tax" (below).
Native Pass Fees.....	*Transvaal.*—2s. per head per month, payable by employer, on male natives over age of 14, in labour districts; outside labour districts 1s. payable by native (*Proclamation No.* 18 *of* 1903 *and Act No.* 10 *of* 1913).
Poll Tax.....	*Transvaal.*—£1. 10s. on all married adults, and in addition 15 per cent. of income tax payable in previous year in respect of income derived from sources in the Province, and in case of unmarried persons, 50 per cent. more. £1. 10s. on unmarried persons under twenty-five not income tax payers. The tax is applicable to all income tax payers deriving income from the Province, whether resident in the Province or not. Widowers, widows, and divorced persons supporting minor children, and an unmarried person who is sole support of a parent, are regarded as married. The application to natives was declared *ultra vires* (*Ordinance No.* 7 *of* 1921 as amended by *Ordinances No.* 9 *of* 1922 and *No.* 15 *of* 1925). *Orange Free State.*—See the "Persons and Companies Tax" above.
Transfer Duty.....	*Cape.*—2 per cent. (*Act No.* 5 *of* 1884 as amended by *Act No.* 11 *of* 1913). *Natal.*—2 per cent. (*Law No.* 5 *of* 1860, as amended by *Law No.* 20 *of* 1865, *Law No.* 19 *of* 1883, *Law No.* 19 *of* 1884, *Law No* 5 *of* 1890, *Law No* 6 *of* 1891, *Act No.* 7 *of* 1903, *Act No.* 23 *of* 1907, *Act No.* 31 *of* 1908, *Act No.* 11 *of* 1909, *Act No.* 12 *of* 1909, *Act No.* 11 *of* 1913). *Transvaal.*—2 per cent. Leases liable for 1½ per cent (*Proclamation No.* 8 *of* 1902 as amended by *Ordinance No.* 14 *of* 1905 and *Act No* 28 *of* 1919). *Orange Free State.*—2 per cent. (*Ordinance No.* 12 *of* 1906 as amended by *Act No.* 30 *of* 1908 and *Act No.* 11 *of* 1913). In all Provinces duty is payable within six months of date of contract thereafter interest at rate of 12 per cent. per annum on amount of duty becomes payable.
Wheel Tax.....	*Cape.*—On motor cars, 1,500 lb. or under, £3; 2,500 lb., £4; 4,000 lb., £6; 6,000 lb., £10; over 6,000 lb., £20. Motor cycle, £1. Side car, £1 (*Ordinance No.* 9 *of* 1914, as amended by *No.* 3 *of* 1922.) *Natal.*—On every motor-car lorry, and traction engine not exceeding 1,500 lb., 10s.; 2,000 lb., 15s.; exceeding 2,000 lb., 20s. per wheel; on every motor cycle 5s. per wheel; on other vehicles 2s 6d. per wheel (*Ordinance No.* 13 *of* 1918). *Ordinance No.* 8 *of* 1921 excludes motors from Wheel Tax, but imposes, in addition to registration fee, taxes of £1 on motor bicycles, or 25s. with trailer or sidecar, and between £4 to £12 (amended to £13 by *Ordinance No.* 12 *of* 1923) on motor-cars (£7 tax in addition to compounding fee). **Transvaal.*—2s. 6d. for each bicycle or tricycle; on other vehicles 7s. 6d. for each wheel, for year 1916–17 (not renewed) (*Ordinance No.* 11 *of* 1916). *Orange Free State.*—2s. 6d. per wheel on every vehicle, 9d. per wheel on bicycles (*Ordinance No.* 11 *of* 1917). Additional 7s. 6d. per wheel on motor-cars, motor bicycles, or side-car, 1s. 3d. per wheel on bicycles and 2s. 6d. per wheel on other vehicles (*Ordinance No.* 9 *of* 1921).

* Repealed.

2. **Total Revenues of Provinces.**—The subjoined tables give (i) the total amount of the Union Government subsidy, and (ii) the total revenue collected in the case of each Province from the year 1910–11 (1st April to 31st March each year).

(i) SUBSIDIES OF UNION GOVERNMENT TO PROVINCES—FINANCIAL YEARS 1910-11 TO 1923-24.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Total.
	£	£	£	£	£

§ 3. Ordinary Expenditure of Provinces.

1. **Classification of Provincial Expenditure.**—The tables contained in this section give particulars of ordinary expenditure from 1910 in each Province and in all Provinces under the main heads of (i) General Administration, comprising miscellaneous expenditure on various provincial services, (ii) Education in respect of which 70 per cent. of the total expenditure of the Provinces is incurred, (iii) Hospitals and Poor Relief, and (iv) Roads, Bridges, and Works. Expenditure prior to the 1st April, 1913, was covered by grants of the Union Government, and from that date has been met in each case from the Provincial revenues derived from the sources described in the preceding section of this Chapter.

Chapter II gives particulars as to the functions of Provincial Administrations and the various services for which the Administrations are responsible.

2. **Total Expenditure and Expenditure per Head.**—The tables given below contain particulars as to the total ordinary expenditure in each Province from 1910, and the expenditure per head of the mean total population and the mean European population:—

ORDINARY EXPENDITURE OF THE PROVINCES, AND EXPENDITURE PER HEAD OF THE POPULATION, 1910–11 TO 1923–24.

5. **Expenditure of Provinces on Education.**—In accordance with the provisions of Section 85 (iii) of the *South Africa Act*, for a term of five years (1910–15) and thereafter until otherwise determined by Parliament, education, other than higher education (for which the Union Government is responsible) has been placed under the control of the

Provincial administrations. No legislation has been introduced to alter this administrative arrangement, and expenditure on education forms by far the largest item of expenditure in the Provinces. The subjoined tables give for all Provinces the ordinary expenditure on education for each financial year (1st April to 31st March) since the establishment of Union, and the distribution of expenditure under main headings in each Province for the same period. Further details in respect of expenditure on education are given in Chapter IV.

8. **Provincial Appropriations.**—The following table gives a summary of the total appropriations of the various Provincial Councils in respect of expenditure for a period of two years subsequent to the period covered by the tables in the preceding paragraphs of this section, which contain only the audited and final figures :—

SUMMARY OF PROVINCIAL EXPENDITURE APPROPRIATIONS, 1924–25 TO 1925–26.

Heading.	1924–25.	1925–26.
	£	£
I. General Administration	243,148	259,701
II. Education	6,559,916	6,764,315
III. Hospitals and Charitable Institutions	790,562	823,915
IV. Roads, Bridges, and Local Works	851,339	910,782
V. Miscellaneous	65,782	68,674
VI. Interest and Redemption	695,256	821,070
TOTAL.....£	9,206,003	9,648,457

D. PUBLIC DEBT AND EXPENDITURE FROM LOANS.

1. **Public Debt of the Union.***—The table below gives particulars (i) of the total amount of the gross public debt of the Union, the amount of the sinking fund, and the net public debt at the close of each financial year (31st March) 1911 to 1924, and (ii) the amount of gross and net debt respectively per head of the mean total population and per head of the mean European population. Comparisons under this head with other Dominions are difficult to effect, because of the numerical preponderance of the coloured races in the Union. If it were possible to determine the relative economic position of the individual of the coloured races and the individual of the European race, it might be in reason to institute comparisons. The figures for the Union have, however, been given both for the mean total population, and the mean European population. The true means of comparison with other countries lies in figures some way between those given, probably in each case in an amount per head approximately half of that given in respect of the European population. Nevertheless, it is of interest to note the following amounts, representing for various countries the gross public indebtedness per head of the population :—

The system in the Union under which the responsibility for the whole of the Public Debt is vested in the Union Government, distinguishes it from that in Australia, where each State has separate responsibility, and where the Commonwealth debt forms only a

* A statement showing the position of the public debt at the establishment of the Union when it amounted to £116,036,978 (see paragraph 2 below), will be found in the sixth and previous issues of this *Year Book*.

small proportion of the whole. In any comparison with Canada also differences of provincial government, differences in regard to railways and other undertakings, have to be examined, without which comparison is likely entirely to mislead. Speaking generally, apart from differences in the elements of the population, the conditions in Australia and New Zealand most nearly approximate, and afford the readiest basis of comparison.

5. **Treasury Bills.**—The Union Government issues from time to time Treasury Bills for sums of £500 and over for fixed periods of six, nine, and twelve months, through the Secretary for Finance, Pretoria, the Civil Commissioner, Cape Town, and the Receivers of Revenue at Pietermaritzburg, Durban, Bloemfontein, East London, and Port Elizabeth. The bills are negotiable and are paid on or after the date of maturity with interest at the office from which they were obtained. Interest on twelve months' bills is payable half-yearly.

9. **Expenditure from Loans.**—In the subjoined table particulars are given for six years of the expenditure from loans under the main heads. The expenditure on Railways and Harbours, which amounted during the period of six years to £25,819,383, has absorbed almost half the total capital expenditure of the Union; excluding the capital expenditure of £6,315,961 on measures connected with the War.

Expenditure under the heads of Public Works and Buildings, Lands, and Local Works and School Loans, includes capital expenditure incurred by the Provincial Administrations.

EXPENDITURE FROM LOANS, 1918–19 TO 1923–24.

10. **Loan Expenditure and Recoveries.**—The following table shows, allocated to the various services, (*a*) the net expenditure from loan at 31st March, 1925, (*b*) the net expenditure from loan at Union, (*c*) the net expenditure from loan since Union, i.e. from 31st May, 1910, to 31st March, 1925, (*d*) recoveries on loan account since Union, and (*e*) the gross expenditure from loan account during the same period.

The net expenditure now shown as at the date of Union differs from the total net expenditure given in earlier issues of the *Year Book*, chiefly owing to the fact that the cost of the raising and conversion of loans is excluded.

The differences between the following figures of expenditure and recoveries since Union and those published by the Controller and Auditor General are due to the following adjustments, which increase both expenditure and recoveries:—

	£
(i) Recoveries by Land Bank retained and added to Land Bank capital	189,356
(ii) Added to Public Works expenditure and credited to recoveries Provincial Administrations in connexion with the taking over of technical colleges as places of higher education	95,000
(iii) Portion of special advance to Railways Administration added to Railways and Harbours capital and to recoveries	266,206
(iv) Sundry adjustments between expenditure and recoveries	21,988

These items do not figure as cash transactions in the Exchequer accounts.

A reconciliation statement as between the net expenditure from loan and the public debt is given at the foot of the table.

11. **System of Capital Expenditure in Provinces.**—Prior to the passing of the *Financial Relations Act*, No. 10 of 1913 (as amended), capital expenditure in connexion with services controlled by the Provincial Administrations was covered by the general expenditure of the Union Government. In terms of section 6 (3) of the Act of 1913, however, specific issues from loans are provided for the Provinces in respect of capital or non-recurrent expenditure, defined as expenditure (whether directly or by loan to local bodies) upon the erection, construction, acquisition, extension, or improvement of any building, bridge, pont, or upon any work or undertaking of a permanent nature in relation to a matter entrusted to the Province, but not expenditure upon the construction of a road, unless authorized by the Treasury in special cases; provided that—

(*a*) if the expenditure upon any such building or extension thereof does not exceed £500, or

(*b*) if the expenditure upon any bridge, pont, or other such work or undertaking does not exceed £500, such expenditure is deemed to be normal or recurrent expenditure, except by provision of the Executive Committee of a Province on the annual estimates of expenditure, with the approval of the Treasury.

In 1925 the objects upon which loans could be made from capital expenditure were extended so as to include the purchase of provincial stores and requisites.

The amount which may from time to time be required by any Province for the purpose of meeting any capital or non-recurrent expenditure is advanced to that Province upon loan as required, in such amounts as Parliament authorizes by annual appropriation. Any such advance has to be repaid by the Province to the Treasury by equal half-yearly instalments so calculated that the whole advance and the interest thereon will be repaid within a period not less than fifteen years and not exceeding forty years, but the Treasury may prescribe a shorter period for the repayment of any such advance as is made for the construction of any road. Advances made prior to the 1st July, 1921, bear interest at the rate of 5 per cent. per annum, but under the provisions of section 1 (1) of Act No. 42 of 1917 the Treasury fixed the rate of interest on advances made on or after the 1st July, 1921, at 6 per cent. per annum. From the 1st January, 1923, the rate of interest has again been fixed at 5 per cent. per annum. The instalments and interest aforesaid are treated in the *Appropriation Ordinance* and in the accounts of the Province as part of its normal or recurrent expenditure.

The amounts received by a Province for capital expenditure are paid into the Provincial Revenue Fund.

12. **Details of Capital Expenditure in Provinces.**—Table (i) below gives the total capital expenditure in each Province for a period of years (1st April to 31st March), and the total capital expenditure for the whole of that period. Table (ii) gives in respect of each Province the capital expenditure for a number of years under the main heads of expenditure. The whole of this expenditure is covered in the table contained in paragraph 9 of this section.

CHAPTER XXIII.

CURRENCY, BANKING AND GENERAL FINANCE.

§ 1. Coinage.

1. **The Transvaal Mint.**—On the 5th August, 1890, the Government of the South African Republic, in accordance with a resolution of the Executive Council, granted, subject to the approval of the Volksraad, a concession for the formation of a national bank to Messrs. Labouchere, Oyens and Company, of Amsterdam, and Dr. Wilhelm Knappe, of Berlin. The concession was to run for fifty years, subject to the right of the Government to revise it after twenty-five years, and it included provisions for the establishment of a State Mint which the bank was to lease and work on specified conditions.

Further particulars of the concession were given in the sixth issue of this *Year Book*. During its term of operation the State Mint of the South African Republic issued coins to the total value of £2,722,017. 8s. 4d., comprising gold coinage valued at £2,383,771. 10s., silver, £336,761. 11s. 6d. and bronze £1,484. 6s. 10d.

2. **The Pretoria Branch of the Royal Mint.**—(i) *General.*—The establishment of a branch of the Royal Mint at Pretoria was provided for by the Union Act No. 45 of 1919, which voted a sum of £40,000 annually out of the consolidated fund for the establishment and working expenses. A Royal Proclamation, dated the 14th December, 1922, determined the Pretoria Mint to be a branch of the Royal Mint, London, for the purpose of the manufacture of the British sovereign and half-sovereign. The Governor-General's Proclamation No. 37 of 1923 (the *Pretoria Mint Proclamation*, 1922), gave effect to the above Order in Council as from the 1st January, 1923.

The *Coinage Act*, No. 31 of 1922, determines the powers of the Minister of Finance in respect to the coinage of Union of South African silver and bronze coins and of the Governor-General in respect to dimensions and designs, etc. The denominations, weight, and fineness, and legal remedies for coins to be made at the Pretoria Mint are therein scheduled. Provision is also made for the purchase of metals for coinage.

From the 1st January, 1923, when the Governor-General's Proclamation became effective, the annuity provided by Act No. 45 of 1919 became payable, and the Pretoria Branch Mint began to function. Government Notice No. 742 of the 2nd May, 1923, contains the regulations issued by the Governor-General as to the deposit of gold bullion at the Pretoria Mint.

The Pretoria Mint is built on the site of the old gaol in Visagie Street, so intimately connected with the past history of the Transvaal. The design of the building is simple and allows for ample light and floorspace. No provision has been made for the refining of gold bullion, this process being undertaken at the Rand Refinery, Germiston.

The cost of erecting the mint up to the 31st March, 1925, was :—Buildings, £148,774 ; machinery and equipment, £73,357 ; land, £9,000 ; and miscellaneous expenses, £5,809. The net profit up to that date, after repayment of all capital expenditure and working costs, amounted to over £14,000.

All appointments to the Mint staff and the expenditure under the annuity are made and regulated by the Imperial Treasury and the accounts of its establishment are audited by the Imperial Comptroller and Auditor-General. The accounts relating to the manufacture of Union coins and all accounts other than those connected with the annuity are submitted to the examination and audit of the Union authorities.

The chief officer of each Branch is a Deputy of the Master of the Mint. The following are the names of the principal officers of the Pretoria Branch :—

Deputy Master	R. G. J. Pearson, M.Inst.M.M.
Superintendent	J. T. Becklake, A.M.I.E.E.
Assayer	C. R. Robson, B.Sc., A.I.C.
Chief Clerk and Accountant	R. E. Hill.

In addition to the British gold coin to be struck at the Mint under the conditions and at the charges given in the Government Notice No. 742, provision has also been made therein for assaying and marking with the Mint stamp bars of varying weights for the gold markets of the world. The sovereigns and half-sovereigns coined at the Mint will bear on the reverse the mint-mark "S.A." to distinguish them from those struck in London (no mint-mark) or at the other Branches in Sydney, Melbourne, Perth, Ottawa, and Bombay, which are marked "S," "M," "P," "C," and "I" respectively.

Union of South Africa silver and bronze coin are being coined at the Pretoria Mint. The designs for the shilling downwards, excepting the farthing, were the work of Mr. J. S. Cleland, the Architect, Public Works Department, and those for the two-and-a-half-shillings and florin of Mr. Kruger Gray, an artist in London. The denominations, with an indication of the designs of the reverses, are as follows (in all cases the obverses bearing the crowned effigy of His Majesty the King with the inscription GEORGIUS V. REX IMPERATOR, the inscription on the reverses being SOUTH AFRICA—ZUID AFRIKA and the date):—

Two-and-a-half-shillings..	A shield containing the Arms of the four Provinces of the Union, surmounted by a Crown, the denomination expressed as 2½ *Shillings*.
Florin.....	Shield as for above coin, no Crown. Denomination expressed as *Florin*.
Shilling.....	Figure of Hope with an Anchor. 1 *Shilling*.
*Sixpence.....	The figure "6" or "3" within a wreath of silver leaves.
*Threepence.....	
Penny.....	A Dutch East India merchantman in full sail. "1 Penny 1" or "½ Penny ½."
Halfpenny.....	
Farthing.....	Two heraldic sparrows. "¼ Penny ¼."

The silver coin is composed of 800 parts of pure silver to 200 parts of copper; whilst the bronze coin is made of a mixture of copper, tin, and zinc.

The profit or "seigniorage" derived from the issue of Union silver and bronze coin, as well as the revenue accruing from gold-coining charges, etc., is paid to the Union Government. The Mint is authorized to withdraw per annum £200,000 of British silver coin, ·925 standard, and the Imperial Government pays the Union Government the difference between the nominal and the bullion values thereof. The output of Union coinage is dependent upon demands made upon the Mint by the banks, and future expansion of the demand for this coinage would cause an increase in the seigniorage accruing to the Union Government. The demand for bronze coinage, though as yet not large, also yields a profit.

(ii) *Gold.*—In view of the Government's intention to return to the gold standard in July, 1925, the Pretoria Mint, acting on instructions from the Union Treasury, collected from the banks in Pretoria, Johannesburg, Capetown, Durban, and other centres, gold to the value of approximately £9,000,000. It was decided to go through this coin, separating the good-weight British coin from the light and setting aside the Transvaal Republican coin. The good-weight coin thus obtained was cleansed from dirt, so that it would reach the public in good condition, and was reissued to the banks. Up to the 30th June, 1925, the issues of this coin amounted to £4,015,309 in sovereigns and £86,036 in half-sovereigns. Light gold coin is to be melted down and recoined, the Imperial Government having undertaken to bear the cost of deficiency of gold; such recoinage being limited to an amount of £500,000 per annum.

The sudden decision in May, 1925, of the Government to return to the gold standard with the United Kingdom, caused a large demand for gold coin, and during the first half of 1925, the Mint was working at full pressure on the production of new sovereigns in addition to the sorting and cleaning of the above-mentioned Treasury coin. Approximately 1,000,000 oz. of fine gold from the Rand Refinery was coined up to the end of June, 1925.

(iii) *Silver.*—The total nominal value of silver coin received in the Mint for recoinage to the 30th June, 1925, was as follows: British coin (·925 standard), £620,583. 0s. 3d.; Transvaal Republican coin, £112,121. 7s. 6d.; German coin, £54,194. 15s. 9d.; total, £787,899. 3s. 6d. In addition, owing to the large demand for half-crowns, due to the withdrawal of the 10s. note, it was found necessary to purchase approximately 150,000 oz. of fine silver from the Rand Refinery; but though the silver currency has been thereby increased by £80,381, the S.A. Reserve Bank has withdrawn from circulation many times that amount in 10s. notes.

---

* A new design, more in keeping with the designs on the other denominations of Union coinage has been approved and executed for the reverse of the 3d. and 6d. coins. This consists of a representation of the Protea, the typical botanical emblem of the Union, enclosed in a figure of which the sides are formed by bundles of four rods bound together, symbolical of the four united Provinces; on the 3d., three bundles; on the 6d., six bundles. Coins of these new designs were first struck and issued in 1925, and slight alterations in the value designations on the 2s. 6d., 1s., and the bronze coins were also made.

THE TOTAL ISSUES OF NEW GOLD, SILVER, AND BRONZE COIN FROM THE PRETORIA MINT, UP TO 30TH JUNE, 1925, WERE AS FOLLOWS* :—

Denomination.	Number of Pieces.	Value.
£	1,456,054	£1,456,054 0 0
10s.	—	—
Total Gold	1,456,054	£1,456,054 0 0
2s 6d	4,217,396	£527,174 10 0
2s	2,207,152	220,715 4 0
1s	1,918,895	95,944 15 0
6d	522,990	13,074 15 0
3d	909,646	11,370 11 6
Total Silver	9,776,079	£868,279 15 6
1d	135,850	£566 0 10
½d	69,753	145 6 4½
¼d	77,954	81 4 0½
Total Bronze	283,557	£792 11 3
Total All Coins	11,515,690	£2,325,126 6 9

In addition to the above, 647 sets "A" and 470 sets "B" of specimen coins were issued. Sets "B" comprise a collection of the silver and bronze coinage, and sets "A" include also specimen gold coins of the £1 and 10s. denominations.

§ 2. Currency and Banking.

1. **Currency and Banking Act, 1920.**—In terms of the *Public Welfare and Moratorium Act*, 1914, and its amendments, an embargo was imposed on the export of specie from the Union, and in 1920 a Select Committee of the House of Assembly, under the Chairmanship of the Minister of Finance, was appointed to investigate the effects of this measure and also to inquire into the question of modifying the existing statutory provisions in regard to currency and banking. Following on the report of the Committee, the *Currency and Banking Act*, No. 31 of 1920, was passed. In this Act provision was made for the issue of temporarily inconvertible gold certificates and the establishment of a Reserve Bank (see below).

A Currency Conference which was held in October, 1921, in Pretoria, with Mr. W. H. Clegg, the Governor of the South African Reserve Bank, as Chairman, reported in favour of an ultimate return to the gold standard of the same weight and fineness as before the war and against any inflation of the currency. With these objects in view the Conference made the following recommendations in a majority report :—

(*a*) That the inconvertibility of the gold certificate be extended to 30th June, 1925.

(*b*) That the embargo imposed on the export of gold bullion under the *Public Welfare and Moratorium Act*, 1914, and later amendments, be removed as soon as possible, and that the export and import of the precious metals in the form of bullion be freed from all restrictions.

* In November, 1924, the Transvaal Chamber of Mines sent to the Mint 606 fine ozs. of gold for experimental conversion into sovereigns.

(*c*) That it be open to the public to make contracts with an express provision for payment in gold, and that, if necessary, the law be altered so as to prevent a debtor discharging his obligations (unless with the consent of the creditor) in any form of money other than that specified in the contract.

(*d*) That the provisions of the *Public Welfare and Moratorium Act*, and amendments thereto, empowering the imposition of an embargo on the export of coin be not continued after 30th June, 1922.

The *Public Welfare and Moratorium Act* was allowed to lapse on 30th June, 1922, and thereafter the movement of gold to and from the Union was freed from all restrictions.

2. **Gold Certificates.**—The *Currency and Banking Act*, 1920, gave authority for the Treasury to receive deposits of gold coin and bullion to the value of not less than ten shillings, and to issue therefor certificates known as *gold certificates*. Such certificates may not be issued for a sum in excess of—

(*a*) The face value of the gold coin presented, provided such coin is not less than the least current weight prescribed by law for such coin; and

(*b*) £3. 17s. 10½d. per ounce standard for the gold bullion or light coin presented, subject to such charges as may from time to time be prescribed by regulation to cover the cost of refining and minting.

Whenever the market price of gold in the Union exceeds £3. 17s. 10½d. per standard ounce, a proclamation may be issued declaring the suspension of the redemption of gold certificates: Proclamation No. 220, 1920, 15th December, 1920. Otherwise, gold certificates are redeemable at the Treasury in gold specie on demand. Gold certificates are legal tender for the payment of any sum up to their face value. The Treasury is required to publish weekly a statement of the gold certificates issued, redeemed, and outstanding on the Saturday preceding the publication.

The Treasury may require each bank transacting business in the Union to deposit at the Treasury the whole or any portion of the gold coin held by or on behalf of such bank and receive in exchange gold certificates.

It was provided that gold certificates should be convertible into gold after 30th June, 1923, unless otherwise determined by Act of Parliament. On the recommendation of the Currency Conference of 1921, the period of inconvertibility of gold certificates was extended by the *Currency and Banking Act Amendment Act* No. 22 of 1923, to the 30th June, 1925.

PARTICULARS OF THE ISSUE OF GOLD CERTIFICATES, 1920 TO 1925.

Date.	Total Value of Certificates Issued.	Value of Certificates Redeemed.	Value of Certificates Outstanding.	Gold held for Redemption of Certificates.
	£	£	£	£
18th December, 1920....	7,200,000	—	7,200,000	7,200,000
26th March, 1921.....	8,459,000	91,933	8,367,067	8,651,117

27th June, 1925.....	10,450,501	1,380,183	9,070,318	9,070,318
26th September, 1925.....	10,450,501	5,948,418	4,502,083	4,502,083
26th December, 1925.....	10,450,501	8,815,017	1,635,484	1,635,484

3. **Gold Standard Inquiry Commission.**—In view of the fact that, under existing legislation, gold certificates would cease to be inconvertible on the 1st July, 1925, and South Africa would automatically return to the gold standard on that date, the Government obtained the services of Dr. E. W. Kemmerer, Professor of Economics and Finance at Princeton University, United States of America, and Dr. G. Vissering, President Bank of the Nederlands, "to visit the Union and investigate the question of the restoration of the gold standard by the Union independent of the United Kingdom." The two Commissioners met in London in the middle of November, and before preceeding to South Africa interviewed or obtained informal evidence from a number of persons. They arrived in Pretoria on 10th December, and, after an exhaustive inquiry, submitted their report to the Government on 8th January, 1925. They recommended that South Africa should return to the gold standard on the 1st July, 1925, and that a public announcement to that effect be made

as soon as possible. A few days later the Government announced that it did not intend to introduce amending legislation during the session, so that South Africa would have returned to the gold standard on 1st July, 1925. Owing, however, to the return of the United Kingdom to the gold standard at the end of April, gold certificates were proclaimed convertible into gold on the 11th May (Proclamation No, 110, 1925). They are now being withdrawn and cancelled.

In the report the advantages of adopting the gold standard were stated to be (1) Greater stability in purchasing power, both internal and external; (2) greater stability in interest rates and a lower level of real interest rates; (3) stability of exchange with gold standard countries, which were continually increasing in number and which in many cases determined the ulimate price of South African exports; (4) greater confidence in South Africa abroad, which would encourage investment of foreign capital; (5) greater confidence of labour; (6) more convenient and more sanitary currency; (7) benefit to the gold industry by encouraging other countries to return to the gold standard.

The chief disadvantage was stated by the Commissioners to be the instability of exchange with England, but as offsetting factors to that were (1) the fact that neither high nor low rates of exchange were of permanent advantage or disadvantage to either importers or exporters, and (2) the risks incident to a fluctuating exchange can be avoided by making forward exchange contracts.

The Commissioners further stated that, although South African credit abroad would be improved, it was a risky policy to borrow heavily in a country with a managed paper currency. South Africa should therefore reduce her public borrowing, and as far as possible borrow on a gold basis whether at home or abroad.

The chief reasons why South Africa should have no difficulty in maintaining a gold standard were thus enumerated in the report: (1) There was a mint in operation and gold specie need not be imported; (2) a Reserve Bank had been constituted, which could assist in maintaining the monetary standard; and (3) there were enormous gold supplies continuously being produced in the country.

The Commissioners recommended that, with the object of maintaining the gold standard, the Reserve Bank should become more active in the open market. The Act gave the Bank almost sufficient power to do so, but the following suggestions requiring minor changes in the existing law were offered:—

(1) The Bank to have power to make—
  (*a*) loans not exceeding 120 days on bills or one-name paper secured by warehouse receipts for staple commodities not exceeding 75 per cent. of value;
  (*b*) direct loans not exceeding fifteen days up to amount of the Bank's paid-up capital to banks collateralled by bills which the Bank might rediscount, and of short-time Government and municipal securities;
  (*c*) investments in Union Government or municipal notes or bills with maturities not exceeding six months to amount to Bank's paid-up capital.
(2) Extension of usance for discounts from 90 to 120 days.
(3) Modification of requirements as to gold balance abroad.

The following administrative changes were suggested with a view to the Bank functioning more effectively:—

(1) Issue of 90-day Treasury bills.
(2) Preferential rates for trade acceptances.
(3) Use of Bank as chief depository for Government funds.
(4) Bank should open branches in principal towns in Union and in London.

Besides this, the Commissioners recommended the withdrawal of gold certificates, the repeal of section 32 of the Bank Law, and the withdrawal or restrictions on the melting of gold coin and bullion.

4. **South African Reserve Bank.**—Chapters II and III of the *Currency and Banking Act*, as amended by Act No. 22 of 1923, provide for the establishment at Pretoria of "The South African Reserve Bank." The bank management consists of a board of eleven directors, of whom six are elected by stockholders, three must be or have been actively engaged in commerce or finance, one in agriculture, and two in other industrial pursuits, three are Government representatives, while the Government also appoints the Governor and the Deputy-Governor of the bank. No person can be nominated as a director, if he is a director, officer, or employee of another bank or a member of Parliament or of a Provincial Council. All the directors must be British subjects and must reside in the Union.

The capital of the Bank is £1,000,000. No stockholder other than a subscribing bank or the Treasury may hold more than £10,000 of the capital stock. If any bank parts with its stock in excess of £10,000 it may not re-acquire it.

The capital of the Bank may be increased with Treasury approval, and the price of stock for that purpose may be fixed by the board with the approval of the Treasury.

Provision is made for the creation of a reserve fund which will ultimately be equal to the paid-up capital. No dividend exceeding 6 per cent. is to be paid as long as restrictions on the export of gold or on the convertibility of gold certificates are in force. Later, profits in excess of 10 per cent. dividend will be paid to the Government.

The Bank may engage in the following business :—

i. May make and issue bank notes.
ii. May accept money on deposit and collect money for customers.
iii. May buy and sell or rediscount bills of exchange, promissory notes, or other commercial paper having a maturity not exceeding ninety days. A fifth of this business may be six months' bills for agricultural purposes or based on live stock.
iv. May make loans and advances on specified securities.
v. May deal with 90 days Bills of Exchange and Promissory Notes, endorsed by a bank for the purpose of carrying or trading in Union Government Securities.
vi. May deal in six months bills of the Union Government or of a local authority.
vii. May effect transfers by telegram or letter, etc., to places abroad.
viii. May buy and sell stock, etc., having not more than six months to run of the Union Government and of local authorities in the Union, may invest a sum not exceeding the paid-up capital and reserve in securities not having more than two years to run of the Union or other governments, may invest its staff and superannuation funds in Union Government securities of any currency.
ix. May buy and sell securities for customers.
x. May buy, sell, and deal in precious metals.
xi. May accept the custody and management of moneys, securities, and other articles of value.
xii. May open accounts in foreign countries and act as agent for any bank.

The Bank may not, however :—

Engage in trade or have a direct interest in any commercial or industrial undertaking except as specially provided above ; purchase its own stock, or the stock or shares of any other bank or grant security upon them ; advance money on mortgage or on notarial bond or cession thereof or become the owner of fixed property except for its own business premises ; make unsecured loans or advances ; draw or accept bills payable otherwise than on demand ; accept money on deposit for a fixed term or allow interest on credit balances on current account.

The Bank has the sole right to issue bank notes in the Union for a period of twenty-five years. These notes are legal tender except when tendered by the Bank itself. The denominations of notes are to be prescribed by the Treasury, and the notes are to be redeemable in gold specie or gold certificates. The note issue is to be secured to an amount of not less than 40 per cent. in gold, and the remainder in commercial paper or trade bills, or until 30th June, 1928, in British or Union Government Treasury Bills, which must not exceed 35 per cent. of the total note issue, nor 140 per cent. of the commercial paper or trade bills held by the Bank. It is also secured by a first charge on all the assets of the Bank. Further provision is made for the suspension of reserve requirements for certain limited periods subject to a graduated tax on the excess issue of notes. The Bank must increase its rates of interest and discount by at least the same percentage.

The Bank must hold in gold or specie a reserve of at least 40 per cent. of its deposits and bills payable in addition to the gold reserve required for bank notes (not more than one fifth of this reserve may be silver specie).

Every bank transacting business in the Union is required to hold reserve balances in the Reserve Bank equal to at least 10 per cent. of its demand liabilities in the Union other than notes, and 3 per cent. of its time liabilities to the public in the Union.

The Act came into operation on 17th December, 1920, and the Bank opened on 30th June, 1921. In December of the same year it notified the Treasury that it was in a position to issue notes. A proclamation (No. 14 of 1922) was issued declaring that on 30th June, 1922, all other banks should cease to issue or reissue bank notes. The Treasury subsequently prescribed the following denominations of notes to be issued : 10s.,* £1, £5, £20, and £100. As, however, there was found to be a shortage of £1 notes the Reserve Bank at the request of the other banks actually began issuing notes in April. By the end of July the change over was practically accomplished. Under the Act the commercial banks transferred the liability for their outstanding notes, amounting to £443,084 to the Reserve Bank on the 30th June, 1924.

Until the issue of its notes the business of the Reserve Bank was chiefly confined to granting advances to the Government and acting as a clearing-house for other banks. Since then it has been engaged in building up a rediscount business.

The Bank has opened branches in Johannesburg, Capetown, Durban, Port Elizabeth, and East London. It has been actively engaged in marketing the gold production, which has enabled it to control the South Africa-London exchange.

* By Government Notice No. 2138 dated 24th December, 1923, the Treasury prescribed that 10s. notes should no longer be issued.

SOUTH AFRICAN RESERVE BANK—LIABILITIES AND ASSETS, 1921 TO 1925.

(SUBSCRIBED CAPITAL, £1,000,000.)

5. **Banking in South Africa.**—A brief account of the history of banking in the Union will be found in the sixth and previous issues of this *Year Book*.

In the following tables are shown the liabilities and assets of all banks operating in South Africa since 1891, with the exception of the Banque Française de l'Afrique du Sud, which operated in the Transvaal for a few years, but the returns of which have not been fully traced. The statements contain returns of the following banks:—Standard Bank of South Africa, Limited, 1891–1925; Bank of Africa, Limited, 1891–1911 (amalgamated with the National Bank, 1912); African Banking Corporation, Limited, 1891–1919 (amalgamated with the Standard Bank, 1920); National Bank of South Africa, Limited, 1911–1925; Netherlands Bank of South Africa, Limited, 1891–1925; Natal Bank, Limited, 1891–1913 (amalgamated with the National Bank, 1914); National Bank of the Orange

Free State, Limited, 1891–1913 (amalgamated with the National Bank, 1910); Worcester Commercial Bank, Limited, 1891 (amalgamated with the African Banking Corporation, 1892); Robinson South African Banking Company, Limited, 1900–1904 (liquidated, 1905); National City Bank of New York (South African Branch), Limited, 1920 (liquidated, 1921); Colonial Banking and Trust Company, Limited, 1921–25: and Stellenbosch District Bank, 1891–1925; and Transvaal Commercial Bank, 1923–24 (amalgamated with Netherlands Bank of South Africa, 1925).

Acceptances have been omitted in accordance with returns published since 1917. It has been found impossible to disentangle the item "Money at Call or Short Notice" before the year 1917. Part of it appears to have been included as cash and part of it with "Other Assets." In the tables below it has been included since 1917 in "Other Assets." The amounts were:—

	£1,000
1917	4,574
1918	3,596
1919	5,339
1920	2,707
1921	7,051
1922	3,004
1923	4,262
1924	5,808
1925	4,539

In any case the transactions were chiefly outside the Union.

* Includes balances in South African Reserve Bank, 1921—£6,519,000, 1922—£5,156,000, 1923—£4,872,000, 1924—£4,624,000, and 1925—£5,608,000.

† Includes notes of South African Reserve Bank, 1922—£2,980,000, 1923—£3,128,000, 1924—£2,991,000, and 1925—£2,234,000.

6. **Joint-Stock Banks.**—There are five banks trading in the Union. Of these, the Standard Bank of South Africa, Limited, has its Head Office in London, the *National Bank of South Africa, Limited, in Pretoria, the Netherlands Bank of South Africa, Limited, in Amsterdam, Holland, and the Stellenbosch District Bank, Limited, in Stellenbosch, in the Cape Province, and the Colonial Banking and Trust Company, Limited, in Johannesburg.

Subject to the amending clauses of the *Currency and Banking Act*, 1920, and the Amending Act, No. 22 of 1922, the following laws exist to control banking :—

Transvaal Law No. 2 of 1893.
Orange Free State Ordinance No. 20 of 1902.
Cape Colony Act No. 6 of 1891.
Union Act No. 7 of 1917.

Under the *Banks Act* of 1917 all banks are required to render to the Union Treasury detailed returns of their assets and liabilities within and without the Union as at the 31st March, 30th June, 30th September, and 31st December in each year.

In terms of section 31 of the *Currency and Banking Act*, 1920, as amended by Act No. 22 of 1923, all banks are required to make a monthly return showing, for the Union, their liabilities to the public, their cash reserves, the total amount of their advances and discounts, and the value of South African Reserve Bank notes held by them.

* Now operating under the title of Barclays Bank (Dominion, Colonial, and Overseas)—see para. 13 following.

7. **Branch Banking.**—The following table gives the numbers of branches, sub-branches, and agencies of the various banks in the Union in the years 1914 and 1925 :—

BRANCH BANKS, SUB-BRANCHES, AND AGENCIES, 1914 AND 1925.

Bank.	1914.				1925.			
	Branches.	Sub-Branches.	Agencies.	Total.	Branches.	Sub-Branches.	Agencies.	Total.
Standard Bank.	171	—	26	197	221	25	34	280
National Bank.	175	—	27	202	238	14	65	317
Netherlands Bank.....	7	—	—	7	17	—	—	17
Stellenbosch Bank.....	1	—	—	1	1	—	—	1
African Banking Corporation..	37	2	—	39	—	—	—	—
Natal Bank....	32	1	8	41	—	—	—	—
Colonial Banking and Trust Company.. .	—	—	—	—	8	—	—	8
TOTAL. ..	423	3	61	487	485	39	99	623

In 1914 there was one bank or agency per 2,782 European persons, while in 1925 there was one bank or agency per 2,628 European persons, banking facilities having increased at an even greater rate than the population, despite amalgamations, which closed competing branches in many towns and villages.

The extent to which the country is served by banks may be gathered from the fact that there are only two urban areas—Albertinia and Keimoes—other than suburbs, with a European population at the 1921 census of over 600, which have not got banking facilities. There are no less than fifty centres with a population under 1,000 Europeans that are served by two banks.

8. **Banking Statistics.**—The subjoined statements give particulars for a number of years as to the liabilities and assets of all joint-stock banks in the Union, and for the year 1925 as to the liabilities and assets of each bank. The form of presentation is based upon that prescribed by the Union *Banks Act* of 1917, which differs in certain respects from the form adopted for previous years.

9. **Joint-Stock Banks : Liabilities and Assets in the Union.**—Full details of the liabilities and assets in the Union of the Joint-Stock Banks are available only from 1917. Prior to that year the information is incomplete, but sufficient details are available for the years 1913 to 1916 to make it possible to construct tables comparable with later years. For instance, Subscribed Capital, Paid-up Capital, Reserve Fund and Notes in circulation are known, and figures for Deposits and for Bills and Advances, obtained from the Standard Bank in London, were published in the report of the Gold Standard Inquiry Commission. The figure for Coin and Bullion has also been obtained from the same source, and a few other items have been estimated. For the years 1913 to 1916, it was, however, found impossible to make any satisfactory estimates for " Balances due to or by Head Office and other Branches and Banks."

The following tables give (i) the Liabilities and (ii) the Assets of the Joint Stock Banks for the years 1913 to 1925, inclusive.

(i) JOINT-STOCK BANK—LIABILITIES IN THE UNION AS AT 31st DECEMBER IN EACH YEAR—1913 TO 1919.

10. **Clearing-House Returns.**—On account of the fact that banking in South Africa is almost entirely confined to a few large corporations and transactions between different branches of the same bank are not put through a clearing house, the Clearing House Returns in the Union, though not without considerable interest, must be interpreted with caution. Clearings take place in every town in which two banks have branches and the returns of the seven chief towns are given below. Since the South African Reserve Bank commenced business, clearing-house settlements throughout the country have been effected by drawing

on balances with the Reserve Bank. The South African Reserve Bank is in effect the clearing-house of all the clearing-houses, and this fact must be remembered in connection with the Pretoria returns from July, 1921.

CLEARING-HOUSE RETURNS 1913 TO 1925.

* July to December.

11. **Average Exchange Rates.**—The average exchange rates, *South Africa on London*, for each year for the last sixteen years are published below. The calculations have been confined solely to the Telegraph Transfer, Sight, and Ninety Days' Sight Buying and Selling Rates. The seventh column, headed the "Mean Value of £100 Sterling," has been calculated by taking the mean point between the buying and selling T.T. rate, and represents the average price of sterling in terms of South African money. The eighth column, headed "Average Discount Rate per Annum," is calculated from the difference between the ninety days' sight and the T.T. buying rates, the period allowed for sight being taken as twenty days; it represents the average annual discount rate charged by the banks on money advanced on exporters' bills, and eliminates charges for exchange accommodation.

During the sixteen years, the highest mean value of sterling was £105; this took place between 30th November, 1920, and 5th January, 1921, and the lowest £92⅜ as between 1st May, 1920, and the 15th June, 1920.

The highest discount rate on ninety days' sight was 11·614 per cent. per annum, between 4th August, 1920, and 7th August, 1921, and the lowest, 3·940 per cent. per annum, between 1st March, 1911, to the 6th October, 1913, and again from the 16th February, 1914, to the 3rd August, 1914.

The greatest margin between the T.T. buying and selling rates was 2⅞ per cent. between the 12th February and 7th March, 1920, and the smallest, ⅜ per cent., between 11th March, 1910, and 25th April, 1910.

* Not quoted after 3rd August, 1914.

12. **Bank Rate of Discount.**—The South African Reserve Bank, under Section 12 (3) of the *Currency and Banking Act*, is obliged to "fix and publish from time to time the rates at which it will discount the various classes of bills." The first announcement made on the 29th December, 1922, fixed the following rates :—

6 per cent. for first class commercial bills of not more than 90 days' currency ;
6½ per cent. for first class agricultural bills with a maturity exceeding 90 days but not exceeding six months.

These rates were lowered by ½ per cent. in each case from the 21st November, 1924.

The minimum advance rate previously quoted by the other banks may perhaps be regarded as corresponding to the above rate for the period before the Reserve Bank quoted a rate. The rates for a period of ten years were :—2nd February, 1913, 6 per cent.; September, 1915, 6½ per cent. (Coastal 6 per cent.); 1st March, 1920, 7 per cent. ; 16th August, 1920, 7½ per cent. ; 1st May, 1922, 7 per cent.

13. **Bank Amalgamations.**—An amalgamation of the National Bank of South Africa with the Colonial Bank and the Anglo-Egyptian Bank took place by means of a reincorporation of the Colonial Bank, under the title Barclays Bank (Dominion, Colonial, and Overseas), and its acquisition by an exchange of shares of the entire interest of shareholders in the other two banks.

The registered capital of the bank is £10,000,000, and the following shares have been issued :—

8 per cent. cumulative preference shares of £1 each, fully paid	£1,793,000
"A" Shares of £1 each, fully paid	2,682,500
"B" Shares of £5 each, £1 paid	500,000
	£4,975,500

The £7 shares of the National Bank were exchanged for two 8 per cent. cumulative preference shares of £1 each, fully paid, and five "A" shares of £1 each, fully paid, in all 2,075,500 shares.

The shares of the Colonial Bank were exchanged for 600,000 preference, and 300,000 "A" shares, and of the Anglo-Egyptian bank for 600,000 preference, and 900,000 "A" shares.

Barclays Bank, Ltd., subscribed for the 500,000 "B" shares of £5 each, paying £1 and a premium, which enabled the reincorporated Bank, after making certain adjustments and adding to the internal reserves, to fix the published reserve fund at the initial stage at £1,000,000.

The voting power of the "B" shares is fixed so as to give Barclays Bank, Ltd., apart from their other shares (they held over 94 per cent. of the shares of the Anglo-Egyptian Bank), the controlling interest.

The amalgamation of the National Bank of South Africa took place in the Union on the 27th February, 1926.

An amalgamation between the Netherlands Bank of South Africa, Limited, and the Transvaal Commercial Bank, Limited, took place on the 5th May, 1925. The former took over all the assets and liabilities of the latter, the shareholders of which obtained paid-up capital of the Netherlands Bank at the rate of 8 guilders in exchange for each 7 guilders of paid-up capital of the Transvaal Commercial Bank.

14. **People's Banks.**—There are three banks in the Union which may be classified under the general designation of "People's Banks." They are run on a quasi-philanthropic basis, their main object being to assist on a commercial basis persons who would ordinarily have recourse to the money-lender. The rate of interest at which they lend may at first sight appear high, but it must not be overlooked that this includes the costs of investigation and the collection of interest monthly on small sums. This work involves an amount of book-keeping quite out of proportion to the amount of money turned over.

(i) *Ons Eerste Volksbank.*—"Ons Eerste Volksbank," which commenced operations in Pretoria in 1918, was the first example of a *People's Bank* in the Union. The original capital of £250, upon which no interest was paid, has been reduced to the nominal amount of £2. 10s. The profits for each year are distributed half to the Reserve Fund, and half to members in proportion to the interest paid to or received by them, provided that they attend one general meeting during the year, or produce satisfactory reasons for their non-attendance.

Advances are made on promissory notes signed by two guarantors. The original rate of interest of 6d. per £1 per month, or 30 per cent. per annum, was reduced at the beginning of 1925 to 5d. per £1 per month, or 25 per cent. per annum, and again, from the beginning of 1926, to 4d. per £1 per month, or 20 per cent. per annum.

Interest paid on current Savings Bank Accounts is at the rate of 6 per cent. per annum; on fixed deposits for six months, 7 per cent.; and for twelve months, 8 per cent.

The following table gives the *Reserve*, *Deposits*, and *Loans* of the bank at the end of each year since 1918.

ONS EERSTE VOLKSBANK.

1924	4,240	19,269	19,960	20,931	8,488
1925	6,003	19,312	23,455	25,690	10,491

(ii) *African United Loan and Savings Bank, Limited, Bloemfontein.*—This Association was established in 1918 on the lines of "Ons Eerste Volksbank," and the first paragraph above concerning the last-named bank is, with the exception of the first sentence, also applicable in every particular to the Bloemfontein institution.

These two establishments are conducted on identical principles. Hitherto, however, the rate of interest at Bloemfontein has been 6d. per £1 per month, but a reduction to 4d. is now contemplated.

The following table contains particulars of the financial position of the bank each year between 1921 and 1925:—

	1921.	1922.	1923.	1924.	1925.

(iii) *O.F.S.T.A. Savings and Credit Society, Ltd.*—The O.F.S.T.A. Savings and Credit Society, Ltd., commenced operations in Bloemfontein in 1922. Its capital consists of £200 from the trust funds of the O.F.S. Teachers' Association, on which 7 per cent. interest is paid, and £21 from private persons, on which no interest is paid.

Interest is paid on Savings Bank Accounts at the rate of 5 per cent. per annum on amounts under £100, and at 6 per cent. on amounts above £100. On twelve-month deposits 7 per cent. is paid.

Money is advanced on promissory notes, with two securities, at the rate of 4d. per £1 per month, or 20 per cent. per annum; but in the case of students, the rate is 8 per cent. in the first year, and 9 per cent. in the second year. Money is also advanced on mortgage at the rate of 8 per cent. In addition to the Reserve Funds, deposits have been made by the Orange Free State and Transvaal Teachers' Associations, and private persons, as a guarantee against bad debts.

The following table gives the *Capital, Reserve, Deposits,* and *Loans* of the Society at the 30th June, in each year, since 1922 :—

15. **Post Office Savings Bank.**—The subjoined statement shows the transactions in depositors' accounts in the Post Office Savings Bank for a period of years. Owing to considerable changes in the accounting system of the Post Office Savings Bank, the Provincial classification has lost significance, and only the figures for the Union as a whole are now given. Earlier issues of the *Year Book* contained particulars of Provincial transactions from 1909–10 to 1919–20.

* Particulars of liabilities and assets of three Savings Banks in 1920–21, and two in 1921–22 and 1922–23, are not given owing to these being merged with other business conducted by those institutions.

17. **Union Loan Certificates.**—Act No. 20 of 1919 authorized the raising of money by means of *Union Loan Certificates*. These certificates offer a suitable investment for small sums in a Government security, bearing a high rate of interest, if left to mature, free of Union income tax and super tax. Certificates of nominal value £1, £10, and £25, and forms of application for Certificates of larger amounts are obtainable at any money order office in the Union and South West Africa. No individual person is entitled to hold more than £1,000 (face value). Limited liability or other registered companies, partnerships, or public bodies are not permitted to hold certificates, but friendly, charitable and provident societies, clubs, and

funds, approved of by the Postmaster-General, may invest, and provided they can produce a certificate from the Commissioner for Inland Revenue certifying that their funds are wholly exempt from income tax, there is no limit to their investments. The purchase price of a single certificate (originally 15s. 6d.) was changed to 16s. on 8th April, 1923, and after the expiration of twelve months from the date of issue, the value thereof increases at the rate of one penny per month, with a bonus of 3d., 3d., and 6d. added at the end of the eighth, ninth, and tenth years respectively, so that at the end of five years the value is 20s. and at the end of ten years, 26s. The currency of these certificates, which originally was fixed at five years, has been extended to ten years from date of purchase. In the case of an individual holding certificates maturing at different dates, the earliest dated certificates may be held until due date of the latest certificates of same price of issue and will bear simple interest at one penny per month per unit. The purchase price, together with any accrued interest, is repayable at short notice any time prior to the date of maturity, on application to the Accountant, Union Loan Certificate Section, Pretoria (in the case of certificates issued at Transvaal or Natal offices) or Cape Town (in the case of certificates issued at Cape and Orange Free State offices). Repayment of any portion of a certificate may be obtained provided it is a multiple of 15s. 6d. or 16s. (as the case may be).

The annual compound interest rates at an issue price of 15s. 6d. are 5·23 per cent. for five years, and 5·31 per cent. for ten years, and at an issue price of 16s., 4·56 per cent. for five years and 4·97 per cent. for ten years.

The total number of individual holders of single and multiple certificates is estimated at between 80,000 and 90,000.

The following table shows the number of units and value of Union Loan Certificates issued and repaid.

NUMBER AND VALUE OF UNION LOAN CERTIFICATES ISSUED AND REPAID TO 31st DECEMBER, 1925,

* Calculated at Issue Value of Certificates, i.e. 15s. 6d. per unit, up to the 8th April, 1923, and thereafter 16s. per unit.

18. **Savings Clubs.**—The object of the Union Loan Certificate issue is not only to raise money but also to encourage thrift among the people, and in order to foster that ideal a central committee, with headquarters at the General Post Office, Cape Town, has been appointed by the Government. The functions of the committee include the establishment of local committees in appropriate centres, the adoption of schemes for promoting thrift, and control of the club movement.† Special facilities for the accumulation of small sums for investment in Union Loan Certificates are provided by means of the savings clubs. These clubs can be formed among groups of people in the same office, business house, factory, school, society, etc., provided not less than five members are enrolled, the necessary books being supplied free of charge. Each club appoints its own treasurer, who accepts deposits of small amounts from members, and immediately invests the collective savings in Union Loan Certificates. These certificates are subsequently distributed among members. The club scheme was commenced at Cape Town in March, 1920, and clubs are now established in almost all the principal towns of the Union. A number of clubs registered have become defunct, due principally to the industrial depression. On the 31st March, 1925, there were 1,028 clubs on the register, of which 313 were school clubs. The certificates purchased amounted to 21,955 units, school clubs being responsible for 10,071. The repayments total 13,764 units.

† The original Union Loan Certificates Committee, formed in May, 1922, was dissolved in September, 1924, and its place was taken by the National Thrift Committee, appointed by the Minister of Finance, with similar functions.

§ 3. Land and Agricultural Bank of South Africa.

1. **Establishment.**—The Land and Agricultural Bank of South Africa was established on the 1st October, 1912, by Act No. 18 of 1912. Prior to that date a land bank existed in the Transvaal under the name of *The Transvaal Land and Agricultural Bank* (Act No. 26 of 1907); in the Orange Free State as *The Land and Agricultural Loan Fund* (Act No. 33 of 1909); and in Natal also under the name of *The Land and Agricultural Loan Fund* (Act No. 27 of 1907). In the Cape of Good Hope *The Agricultural Credit Bank Act*, No. 25 of 1907, was passed, but remained inoperative. On the 1st October, 1912, the three provincial banks ceased to exist, and their assets and liabilities were transferred to and vested in *The Land and Agricultural Bank of South Africa*, referred to for convenience as *The Union Land Bank*.

The Union Land Bank took over the assets and liabilities of the three provincial banks at such an amount "as may be mutually agreed between the Minister of Finance and the central board of the bank." Under that agreement the value of the assets and liabilities of the Transvaal and Natal banks were taken at the figure shown in the balance-sheets as at the 30th September, 1912, but in the case of the Orange Free State bank the balance-sheet figures were reduced by £3,560, the assets *Advances against Promissory Notes* (£105,960) and the liability *Reserve Funds* (£4,816) being reduced by the amount mentioned.

2. **Capital.**—*The Union Land Bank* commenced business on the 1st October, 1912, with a capital of £2,735,000, derived from the provincial banks in the proportions shown above. Its capital is not fixed, and consists of the amount mentioned, together with—

(*a*) such further moneys as Parliament may from time to time by appropriation authorize the Minister of Finance to pay to the bank;

(*b*) such amounts as the bank may recover in respect of advances for constructing dipping tanks and erecting fences made by the Union Government under Act No. 20 of 1911, by the Natal Government under Act No. 20 of 1910, and by the Cape Government under Acts No. 43 of 1905 and No. 37 of 1909 and Government Notice No. 1283 of 1909; and

(*c*) such further amounts as the Bank was authorized to raise, under Section 3 of Act No. 36 of 1921 and Act No. 40 of 1922 for the purpose of financing co-operative societies by means of—

(i) discounting with other banks, bills of co-operative societies,
(ii) overdrafts with other banks,
(iii) issuing "Land Bank bills," and
(iv) receiving moneys on deposit withdrawable at not less than one month's notice.

The further moneys authorized by Parliament are: 1912–13, £400,000; 1913–14, £1,225,000; 1914–15, £750,000; 1917–18, £225,000; 1918–19, £400,000; 1919–20, £300,000; 1920–21, £250,000; 1921–22, £500,000; 1922–23, £500,000; 1923–24, £830,000; 1924–25, £700,000; total, £6,080,000.

Out of the 1913 vote an amount of £200,000 was not drawn, and the 1915 vote o £750,000 was surrendered at the express request of the Minister of Finance. Of the 1924–25 vote, £557,117 was drawn by the bank at the 31st December, 1924, so that of the various amounts voted by Parliament, an amount of £4,987,117 was actually drawn at this date. The dipping-tank and fencing advances handed to the bank for collection amounted, at the 1st October, 1912, to £364,382, in respect of which a sum of £360,617 has been recovered. Out of this amount £216,659 has been credited to the capital account of the bank. At the 31st December, 1924, the bank's capital was, therefore, as follows :—

LAND AND AGRICULTURAL BANK—CAPITAL FUND AT 31st DECEMBER, 1924.

Heading.	Amount.
	£
Capital Funds transferred from Provincial Land Banks, 1st October, 1912..	2,735,000
Parliamentary Appropriations since 1st October, 1912.....	4,987,117
Portion of Dipping-Tank and Fencing Advances Recoveries.....	216,659
Reserve Fund (non-interest bearing capital).....	382,145
TOTAL.....£	8,320,921

3. **Cost of Capital.**—The Act provides that the bank shall pay interest at the rate of 3¾ per cent. per annum on its capital, but this rate may be increased or reduced by resolution of Parliament, and it is further provided that the bank shall not pay a higher rate than is recovered on any advances made by any of the Provincial banks. By resolution, Parliament, in 1914, increased the rate to 4 per cent. per annum on amounts paid to the bank after the 1st April, 1914. The only advances bearing interest at a lower rate than 3¾ per cent. were made by the Transvaal Land Bank under the *Fencing Act*, No. 12 of 1908, at the rate of 3½ per cent. The capital amount involved is being steadily reduced.

The cost of capital to the bank is, therefore, as follows: 3½ per cent. on £167; 3¾ per cent. on £4,376,660; 4 per cent. on £925,000; 5·19761 per cent. on £250,000; 5 per cent. on £1,330,000; 6 per cent. on £500,000; and 5·1465 per cent. on £557,117; average rate, 4·66 per cent.

4. **Management and Control.**—(i) *The Central Board.*—The bank is a body corporate and its operations and policy are controlled by a central board consisting of a Managing Director (who is chairman) and five ordinary members, each of whom is nominated by the Governor-General. The central board meets in Pretoria, where the bank's head office is situated.

(ii) *Local Boards.*—In addition to the central board, there are local boards consisting of three members, who are also nominated by the Governor-General. These local boards are purely advisory, and have been established (1) at Cape Town for the Cape Western area, (2) at Port Elizabeth for the Cape Eastern area, (3) at Bloemfontein for the Orange Free State area, and (4) at Pietermaritzburg for the Natal area. In fixing the four areas mentioned the provincial boundaries were deliberately ignored. Thus for the bank's purposes the Orange Free State and Transvaal areas include certain districts which geographically fall in the Cape Province. Similarly the Natal area extends beyond the geographical boundaries of that Province.

(iii) *Agents for the Bank.*—Every magistrate, field-cornet, and police officer and the Postmaster-General and any officer under him, are by law appointed agents of the bank, when required by the central board to assist in any matter.

(iv) *Staff.*—The bank is not a department of State, and its officers are not members of the Public Service, although its officers may include seconded members of the Public Service.

At the 31st December, 1924, the bank's staff consisted of eighty-eight officers, of whom eight were seconded from the Public Service. Whilst the seconded officers contribute to the various pension funds of the Public Service, the bank established on the 1st May, 1916, a superannuation fund for its own officers, to which it contributes on the £1 for £1 principle. The contributions by officers are limited to 4 per cent. per annum of their respective salaries.

(v) *Cost of Administration.*—The following figures represent the cost of administering the bank from the year 1913, relative to the value of the funds administered in each year: For 1913, ·662 per cent.; for 1914, ·714 per cent.; for 1915, ·573 per cent.; for 1916, ·634 per cent.; for 1917, ·617 per cent.; for 1918, ·664 per cent.; for 1919, ·669 per cent.; for 1920, ·768 per cent.; for 1921, ·849 per cent.; for 1922, ·729 per cent.; 1923, ·713 per cent.; and for 1924, ·741 per cent.

5. **Operations of the Bank.**—(i) *Objects and Powers.*—The main objects of the bank are to make advances—

(*a*) to farmers against the security of first mortgage on agricultural or pastoral land. The maximum advance is £2,000 to any one farmer, and the advance cannot exceed 60 per cent. of the value placed by the Central Board on the land;

(*b*) to agricultural co-operative societies and companies and to guarantee the fulfilment of contracts undertaken by co-operative societes and companies individually or by some organization acting for a group of them. In a "society" members are jointly and severally liable for its debts; in a "company" members' liability is limited to the nominal value of shares subscribed for by them and to any contingent liability attaching to those shares;

(*c*) to farmers to erect boundary and internal fences, to construct dipping-tanks, to construct silos and other contrivances for the making or storage of ensilage, to provide a supply of water, by boring or otherwise, and to erect windmills or other mechanical contrivances for pumping water;

(*d*) to settlers who hold land from the Crown under agreement of purchase or lease. Repayment of these loans is guaranteed by the Minister of Lands.

(ii) *Relief of Distress caused by Drought*—In 1924 Parliament approved of advances being made to farmers in distress through severe losses in stock and crops caused by drought, mainly in the western Transvaal, western Orange Free State and north-western districts of the Cape. £500,000 was provided by Parliament for that purpose to be used in making

advances in kind. That amount does not form part of the bank's funds, but the bank's machinery is being used to administer the fund. The control of this matter was vested in the Managing Director personally, and the central board is in no way concerned with it.

(iii) *Tenant-farmer Scheme.*—The bank's machinery is also being used to pay out and recover the loans made by the Department of Labour under this scheme, which aims at encouraging owners of farms to engage Europeans, who are at present on relief works, as tenants on a share basis.

The Department provided £10,000 for the purpose, up to the 31st December, 1924. The central board is in no way concerned with this matter, the control of which is vested in the General Manager personally.

(iv) *Co-operation amongst Farmers.*—The bank is directly interested in every co-operative society with unlimited liability established by farmers in the Transvaal and Orange Free State Provinces, and it obtains that interest because it has granted loans to such societies. The bank is, however, not responsible for their formation and registration, these matters being governed by the Co-operative Societies Act, No. 28 of 1922, which is administered by the Department of Agriculture.

(v) *Financial Results.*—The loans made by the bank to farmers and agricultural co-operative societies prior to 1921 carried interest at 5 per cent. per annum, with the exception of dipping-tank and fencing loans, for which the rate was 4 per cent. per annum. Since 1921, however, the interest charged has been raised to 6 per cent. on ordinary advances and 5 per cent. on dipping-tank, fencing, silo, and water supply loans. The interest now charged to agricultural co-operative societies is regulated by the cost of raising the money. The profits earned by the bank, from its inception to the 31st December, 1924, are shown in the table hereunder.

The amount of £546,601 shown as net profit, has been placed to a reserve fund, which, together with the amount of £75,926 taken over from the three provincial banks, makes that fund in credit to the extent of £622,527. The Act provides that the reserve fund shall be employed to make good " any loss or deficiency which may occur in any of the transactions of the bank." Up to the present there has been no loss or deficiency, but there was a statutory writing off of £240,381. 16s. 3d. under Section 11 of Act No. 32 of 1924, as a measure of relief granted by Parliament to co-operative societies.

The total earnings of the bank for the period 1st January, 1913, to 31st December, 1924, are shown in the following table as percentages of the bank's capital.

LAND AND AGRICULTURAL BANK.—NET PROFITS AND PROPORTION OF TOTAL EARNINGS TO CAPITAL, 1912 TO 1924.

Year.	Net Profits.	Earnings per cent. of Capital.	Year.	Net Profits.	Earnings per cent. of Capital.
	£			£	
1912.....	8,674*	—	1919...	45,791	5·12
1913.....	30,183	5·00	1920...	45,694	5·24
1914.....	29,852	5·15	1921...	43,959	5·44

1916.....	31,912	4·99	1923...	67,961	5·59
1917.....	42,378	5·16	1924...	71,707	5·90
1918.....	45,305	5·20			
			TOTAL £	546,601	5·56

* Three months ended 31st December.

The bank's object is not to make large profits, and Act No. 36 of 1921 provides that as soon as the reserve fund and the capital of the bank total such amount as is, in the board's opinion, adequate to enable the bank fully to carry out its objects, an amount determined by the board will be paid to the Minister of Finance out of the profits and the reserve fund of the bank, but, to meet this payment, the amount of the reserve fund may not be reduced below £350,000.

The bank's income now leaves about £800,000 available each year for reinvestment; but owing to the growth of the agricultural industry throughout the Union and the consequent increase in capital requirements, it is still necessary for Parliament to augment the bank's own resources. It is anticipated, however, that the time is not far distant when the bank will be able fully to carry out its objects on its own resources, and that it will be in a position to commence the repayment of its capital.

(vi) *Liabilities and Assets.*—The following table shows the amount of the liabilities and assets of the bank in each year from 1912 :—

LAND AND AGRICULTURAL BANK.—LIABILITIES AND ASSETS ON THE 31st DECEMBER, 1912 TO 1924.

Year.	Liabilities.					Assets.

§ 4. Building Societies.

Statistics of building societies in the Union are collected annually under the *Statistics Act*, the first collection having taken place in respect of the year 1919–20. The tables hereunder give particulars of such societies from that year. For the purpose of the regulations under the Act the term "building society" includes all associations or organizations having for their object the purchasing, acquisition or building of houses for members of such associations or other persons. Terminable building societies are included.

The first building society in the Union was established in the Eastern Cape Province in 1864, and there were 53 societies in South Africa in 1920–21, 54 in 1921–22 and 1922–23, and 56 in 1923–24.

§ 5. Assurance.

1. **Union Insurance Act.**—The question of the consolidation of the laws of the several Provinces relating to insurance had been under consideration practically from the year of the establishment of the Union, and a consolidating Bill was printed in 1917, but it was not until the year 1923 that an *Insurance Act* for the Union (No. 37 of 1923) was passed by the legislature. This Act places insurance matters in the Union on a common basis, and repealed the relative old colonial laws wholly or in part. Its provisions had been previously discussed with insurance companies and others concerned.

The Act applies to all persons or bodies of persons (other than local authorities, friendly societies, burial societies, and trade unions) carrying on insurance business in the Union. Provision is made for the registration of insurance companies and for the lodging of security, which may in certain circumstances be increased or decreased, with the Treasury. Every company registered must have a chief office and a principal officer in the Union, and is required to render to the Treasury annually a duly certified revenue account, profit and loss account, and balance-sheet. The classes of insurance subject to the provisions of the Act are accident, bond, investment, burglary, employers' liability, fire, industrial, life, live stock, marine, motor, and plate glass insurance. An actuarial investigation into the financial position of life insurance companies at intervals is provided for. Minors of eighteen years

of age and over may insure their lives. Persons insured may, without consent of the insurance companies involved, engage in military or naval service in defence of the Union. Certain protection against life insurance policies being taken in execution by creditors of the insured is given. The contingency of life insurance companies amalgamating or life insurance business being transferred from one company to another is provided for. Companies having their head offices in the Union may be wound up under certain conditions in the event of their being proved insolvent. Certain requirements must be complied with by persons initiating insurance business in the Union or dealing with insurance in various other ways. There are penalties for infringements of the Act.

The accounts, abstracts, and statements deposited with the Treasury, or a summary thereof in such form as the Treasury may determine, must be presented to Parliament and published. In the absence of a Consolidating Insurance Act, annual statistics of insurance, covering the Union as a whole, were from the year 1917 collected and published under the *Statistics Act* (see paragraph 2). Moreover, certain particulars relating to Cape Life Assurance Companies and returnable under the *Life Assurance Act* of 1891 of the Cape of Good Hope were regularly compiled and published (see paragraph 3). The Union *Insurance Act* repealed the Cape Act referred to, and statistics of insurance more complete and in greater detail than it was practicable to render available under the *Statistics Act*, will in future be compiled from the returns to be submitted by companies under the *Insurance Act*. Statistics for the calendar year 1923 were, however, collected under the *Statistics Act* so as to preserve the continuity.

2. **Statistics of Insurance in the Union.**—In the following tables are given particulars obtained under the *Statistics Act* of 1914 regarding Insurance Companies in the Union for a period of years. The figures relate to every class of insurance transaction :—

§ 6. Registration of Companies and Businesses.

1. **Registration of Companies.**—Particulars are given hereunder for the Union, and for each Province, of the number of companies registered during a period of years, and the nominal capital. Different laws relating to the registration, etc., of companies are in operation in the various Provinces. A measure, Act No. 46 of 1926, consolidating and amending the various company laws in force in the four Provinces, was passed during the 1926 session of Parliament, and comes into operation on the 1st January, 1927.

REGISTRATION OF COMPANIES, 1919 TO 1924.

2. **Registration of Businesses.**—Particulars are given hereunder as to the registration of businesses in Natal and the Transvaal for a period of years. No provision exists in the Cape and Orange Free State Provinces for the registration of businesses or partnerships. The Transvaal Act (No. 36 of 1909) covers a wider field than the Act in force in Natal (No. 35 of 1906), hence the difference in the proportionate number of registrations in these two Provinces.

2. **Estates of Deceased Persons, etc.**—The administration of the estates of deceased persons is regulated by Act No. 24 of 1913, and vested in the Masters of the Supreme Court at Cape Town, Pietermaritzburg, Pretoria, and Bloemfontein, having jurisdiction within the several Provinces, and the Assistant Master at Kimberley, who is subordinate to the Master of the Cape of Good Hope and has jurisdiction in the Griqualand Local Division of the Supreme Court. Provision is made in the Act, *inter alia*, for the registration of wills, the preparation and submission of inventories by surviving spouses and others in the case of married persons dying, the issue of letters of administration to executors testamentary or dative, and of letters of confirmation to tutors and curators, and the due distribution and liquidation of deceased estates under the supervision of the Master concerned. A Guardian's Fund, consisting of all moneys vested by law in the Masters, is established for each Province; these funds are held in trust by the Public Debt Commissioners. (See paragraph 13, section D, chapter XXII.)

The following table gives particulars of work done in the Masters' Offices under the *Administration of Estates Act*:—

CHAPTER XXIV.

POPULATION.

§ 1. Population of the Union.

1. **General.**—The census taken in 1904 in each of the four Colonies which subsequently (in 1910) were incorporated in the Union was the first simultaneous census taken in South Africa. Table (i) hereunder gives the dates of the various censuses which have been taken in the states of South Africa now comprised in the Union; but, while comparisons are possible in respect of the numbers of the population of separate Provinces for earlier periods than 1904, full comparison is only possible in respect of the whole area of the Union for the years 1904, 1911, and 1921—1911 being the year in which the first Union census was taken; and for the year 1918 as to the European population only. The summaries of the population returns for the 1904 and subsequent censuses are given hereunder in tables (ii), (iii), and (iv); while the mean estimated population for the years 1910 to 1926 is shown in table (v). The returns of the 1918 census given in the tables do not include persons absent from the Union on active service or for other purposes connected with the Great War. A special absentee census was taken in respect of males under the *Electoral Census Further Provision Act* of 1918, simultaneously with the main census of the European population in the Union, and 28,312 persons were enumerated; particulars of these will be found in *Official Year Book* No. 4. Attention is drawn to the fact that the figures shown in table (vii) and subsequent tables in respect of the Asiatic and mixed and other coloured races for 1911 differ somewhat from those published in previous issues of the *Year Book*. This is due to a corrected race classification being adopted for the census of 1921, necessitating a slight adjustment of the 1911 figures for the purposes of comparison.

The Report on the Census of 1921 gives a full analysis of the results of that Census and reviews also the results of previous Censuses in South Africa, illustrating the growth and developement of the various sections of the population.

* Preliminary unaudited figures.

Population of the Union from 1904.—The estimates of population which are given hereunder have been framed on the assumption that the rate of increase between any two censuses is uniform, but special allowances have been made for the influenza epidemic of 1918, and for the male absentees specially enumerated in that year (see paragraph 1 above). The estimated figures are based (*a*) for 1910 (all races) on the rate of increase between the censuses of 1904 to 1911; (*b*) for 1911 to 1917 (European population) on the rate of increase between 1911 and 1918 censuses; (*c*) for 1918 to 1920 (European population) on the rate of increase between 1918 and 1921 censuses; for 1921 to 1926 (European population) on the net increase due to births, deaths, and migration; and (*d*) for 1911 to 1926 (non-European population) on the rate of increase between 1911 and 1921 censuses.

(v) POPULATION RETURNS FOR 1904, 1911, AND 1921, ESTIMATED MEAN POPULATION OF THE UNION IN EACH YEAR FROM 1910, AND EUROPEAN POPULATION OF THE UNION, 1918.

Increase in the Population of the Union.—The average annual rate of increase in the population of the Union as shown in the following table was lower for the period 1911 to 1921 than between 1904 and 1911, and notably so in the case of the mixed races and the Asiatics. The former suffered severely in the influenza epidemic of 1918, and in the case of the latter the decline in the average annual increase was due to the considerable emigration of Indians, of whom approximately 29,000 were repatriated between 1911 and 1921. In Natal the number of Indian males decreased by 86 during the ten years, while the number of females showed an increase of 8,391, giving a total increase of 8,305 in the Indian population of that Province, equivalent to an annual rate of 0·62 per cent.

2. **Regional Divisions.**—These divisions are non-administrative, but each comprises a group of magisterial districts. The boundaries, although somewhat arbitrarily drawn, follow closely the different climatic conditions found in the Union due to altitude, varying rainfall, etc.

The Union is divided into six divisions as follows :—

I. *South-Western Coastal.*—Extending from Malmesbury District to Alexandria District inclusive.

II. *South-Eastern Coastal.*—Mainly the coastal districts of Transkei, Natal, and Zululand from Bathurst District to the border of Portuguese East Africa.

III. *Karroo and Cape Central.*—Bounded on the south by Division I, on the east by Division V, and on the north by the Highveld region. It includes the western coastal districts to the Orange River.

IV. *Highveld.*—This embraces the greater portion of the inland plateau land and includes the whole of the Orange Free State, the inland districts of Natal, that portion of Transvaal lying approximately south of the 25° of south latitude, the districts of the Cape Province situated in Bechuanaland, and those adjacent to the south-western border of the Orange Free State.

V. *Cape Thorn Veld.*—Comprising the Transkei hinterland and adjacent districts.

VI. *Transvaal Bushveld.*—This comprises the districts lying approximately north of the 25° of south latitude.

POPULATION IN SIX NON-ADMINISTRATIVE REGIONAL DIVISIONS, CENSUSES OF 1911 AND 1921.

4. **Proportions of the Races in the Population of the Union.**—The proportion per cent. of European to the total population of each Province at the various censuses is shown in the subjoined table (ii). It should be noted that between 1865 and 1891 the population of the Cape Colony was affected by the annexation of areas thickly populated by natives. Between 1891 and 1904, in spite of the annexation of Pondoland and Bechuanaland with 10,300 European and 276,522 of the non-European races, the proportion of European population to non-European slightly increased. In the Orange Free State the proportion of European to non-European population is highest, in Natal lowest, but the former figure has declined from census to census, while the latter shows a rise between 1911 and 1921. The Transvaal occupies an intermediate position, with a constantly rising ratio in favour of the European population.

Table (i) gives the racial distribution of the population of the Union in the census years 1904, 1911, and 1921.

(i) RACIAL DISTINCTIONS OF THE POPULATION AT SUCCESSIVE CENSUSES, SHOWING THE PROPORTIONS OF EACH RACE TO THE TOTAL POPULATION.

Census Year.	European.		Native.		Asiatic.		Mixed and Other.		Total Non-European.		Total all Races.	
	No.	%.	No.	%.	No.	%.	No.	%.	No.	%.	No.	%.

5. **Population of Each Province.**—The following tables give the number of the population of each Province at each census, distinguishing between European and non-European. An analysis of the figures up to the census of 1921 is given in the Report on the Census of 1921. Between 1911 and 1921 the male European population of the *Cape* increased by 28,000, and the female European population by 40,000. These figures reflect not only a natural tendency, but also the fact that there has been a steady flow of male migration from the Cape to other parts of the Union chiefly the Transvaal.

(i) POPULATION OF THE CAPE OF GOOD HOPE AT EACH CENSUS, ACCORDING TO SEX AND RACE.

Census Year.	All Races.			European.		Non-European.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.
1865...	496,381	255,760	240,621	95,410	86,182	160,350	154,439

(ii) CAPE OF GOOD HOPE.—NON-EUROPEAN POPULATION AT EACH CENSUS.

Census Year.	Total Persons.			Bantu.		Asiatic.		Mixed and Other.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
1875	484,201	245,718	238,483	146,252	141,387	Not distinguished		99,466	97,096
1891	1,150,237	571,371	578,866	415,201	422,935	1,305	395	154,865	155,536
1904	1,830,063	900,396	929,667	692,728	732,059	9,316	926	198,352	196,682
1911	1,982,588	954,403	1,028,185	721,441	798,498	6,581	1,083	226,381	228,604
1921	2,132,110	1,019,195	1,112,915	769,947	870,215	5,724	1,972	243,524	240,728

Between the years 1891 and 1904 the European population of *Natal*, excluding Zululand (annexed in 1897), and the districts of Vryheid, Utrecht, and part of Wakkerstroom transferred from the Transvaal in 1903, increased from 46,788 to 87,776, i.e. by 87·60 per cent. The 1891 figures include *mixed races* not specified separately. The number of these was small, and its inclusion would not affect materially the rate of increase. During the period 1904 to 1911 the European population was practically stationary, there having been a decrease of 4,263 males (of which number 1,300 are accounted for by the reduction of military

garrisons) and an increase of 5,268 females. Between 1911 and 1921 the European population increased by 39,000, of whom 46 per cent. were males. The Asiatic increase of 8,229 in the same period was composed entirely of females. The male Asiatic population declined by 163 and the male Indian population by 86.

(iii) NATAL.—POPULATION AT EACH CENSUS.

Census Year.	All Races.			European.		Non-European.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.
1891.....	543,913	268,062	275,851	25,787	21,001	242,275	254,850

1911.....	1,194,043	564,648	629,395	52,495	45,619	512,153	583,776
1918.....	—	—	—	62,745	59,186	—	—
1921.....	1,429,398	707,600	721,798	70,477	66,361	637,123	655,437

(iv) NATAL.—NON-EUROPEAN POPULATION AT EACH CENSUS.

Census Year.	Total Persons.			Bantu.		Asiatic.		Mixed and Other.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
1891....	497,125	242,275	254,850	216,589	239,394	25,686	15,456	—	—
1904....	1,011,645	493,873	517,772	426,766	477,275	63,497	37,421	3,610	3,076
1911....	1,095,929	512,153	583,776	427,061	526,337	80,477	52,943	4,615	4,496
1921....	1,292,560	637,123	655,437	551,025	588,779	80,314	61,335	5,784	5,323

In 1890 the European population of the *Transvaal* as now constituted was 113,713. In 1904 the number had risen to 297,277, and in 1911 it stood at 420,562. The figures for 1904 and 1911 include respectively about 8,200 and 5,000 men of the military garrison. The normal population for the years 1904 and 1911 was therefore 289,000 and 416,000 respectively, marking increases as follows between the various census dates to 1921 :—

1890 to 1904	175,000,	equal to	153·51 per cent.
1904 „ 1911	127,000,	„	43·94 „
1890 „ 1911	302,000,	„	264·91 „
1911 „ 1921	128,000,	„	30·76 „
1890 „ 1921	430,000,	„	378·23 „

The Witwatersrand gold-mining area, comprising the Districts of Springs, Benoni, Boksburg, Germiston, Johannesburg, and Krugersdorp, contains approximately one-sixth of the total European population of the Union, and nearly one-half of the European population of the Transvaal Province.

(v) TRANSVAAL.—POPULATION AT EACH CENSUS.

Census Year.	All Races.			European.		Non-European.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.
1890.....	—	—	—	66,498	52,630	—	—

(vi) TRANSVAAL.—NON-EUROPEAN POPULATION AT CENSUSES OF 1904, 1911, AND 1921.

CENSUS YEAR.	TOTAL PERSONS.			BANTU.		ASIATIC.		MIXED AND OTHER.	
	Total.	Male.	Female.	Male.	Female.	Male.	Female.	Male.	Female.
1904....	972,674	524,325	448,349	499,719	437,408	9,799	1,522	14,807	9,419
1911....	1,265,650	734,642	531,008	705,862	513,983	8,990	2,022	19,790	15,003
1921....	1,544,151	875,042	669,109	847,446	648,423	11,056	4,935	16,540	15,751

The first census of the *Orange Free State* was taken in 1880, when the European population was returned as 61,022. According to the next census in 1890 the population had increased to 77,716, an increase of 16,694, or 27·36 per cent. in ten years. Making allowance for troops stationed in the Province in 1904 and 1911, the figures for those two years are 135,000 and 171,000 respectively, showing increases as follows between the various census dates to 1921 :—

1890 to 1904 ..	an increase of	57,000,	equal to	73·08	per cent.
1904 to 1911 ..	„	36,000,	„	26·67	„
1890 to 1911 ..	„	93,000,	„	119·23	„
1911 to 1921 ..	„	18,000,	„	10·53	„
1890 to 1921 ..	„	111,000,	„	142·83	„

(vii) ORANGE FREE STATE.—POPULATION AT EACH CENSUS.

§ 2. Analysis of Population of Union.

1. **Area of the Union.**—The total area of the Union is 472,347 square miles,* divided between the Provinces as follows :—

AREA OF UNION AND PROVINCES.

PROVINCE.	Area in Square Miles.	Proportion per Cent. of Total Area of Union.	Proportion per Cent. of Total Population, Census, 1911.	Proportion per Cent. of Total Population, Census, 1921.
Cape of Good Hope.....	276,966	58·64	42·94	40·16
Natal.....	35,284	7·47	19·99	20·63
Transvaal.....	110,450	23·38	28·23	30·13
Orange Free State.....	49,647*	10·51	8·84	9·08

* Adjusted figure (see page 860).

2. **Density of the Population.**—The Cape, although the largest, was in 1921 the most thinly populated Province, while Natal with the smallest area had the largest number of persons to the square mile, there being one individual to 15·80 acres, compared with 63·68 in the Cape Province, 51·28 in the Orange Free State, and 33·86 in the Transvaal. The number of persons to the square mile for the Union was 14·64, of whom 3·21 were of European race and 11·41 of other races. The density of the population in each of the four Provinces and in the Union in census years was as follows :—

DENSITY OF POPULATION, 1921, AND PREVIOUS CENSUS YEARS.

(Number per square mile.)

† Census of Europeans only.

3. **Density of Rural Population.**—In previous years it has been the practice to compute the density of population for Provinces and districts irrespective of the number and extent of the towns and villages situated therein, which in effect gives a false comparison between differently constituted districts. Moreover, districts vary considerably in extent and are primarily created for effective administration and not on a population basis. In a young country like the Union the true density should be judged on the basis of the distribution of the rural community living in the rural or farming areas. This has been computed for the Census of 1921, and the urban population, numbering 847,508 persons and occupying 4,888 square miles of municipal lands has been eliminated from the total. The results are given in comparative form in the subjoined table, which distinguishes Europeans from non-Europeans.

POPULATION AND DENSITY* IN RURAL AREAS—CENSUS OF 1921.

Province.	Area in Square Miles.	European.		Non-European.		All Races.	
		Population.	Density.	Population.	Density.	Population.	Density.
Cape	274,174	291,525	1·06	1,783,112	6·51	2,074,637	7·57

* Number per square mile.

4. **Densely and Sparsely Populated Districts.**—The subjoined table gives the ten most thickly populated and the ten most sparsely populated districts of the Union according to the returns of the Census of 1921. It must be understood that the majority of the densely populated districts contain one or more large towns, while others consist largely of mining areas.

DENSELY AND SPARSELY POPULATED DISTRICTS.

District.	Persons to the Sq. Mile.			District.	Persons to the Sq. Mile.

5. **Density Compared with other Countries.**—The table given hereunder shows for the purposes of comparison with the Union the density of population in various countries at the latest available dates :—

DENSITY OF POPULATION IN VARIOUS COUNTRIES.

Country.	Density.*	Country.	Density.*
Belgium (1919)	665·12	Sweden (1920)	34·11
Netherlands (1920)	537·77	Swaziland (1921)	16·02
United Kingdom (1921)	481·89	New Zealand (1921)	11·61
Italy (1920)	319·63	Argentine (1920)	7·66
Germany (1919)	323·26	Southern Rhodesia (1921)	5·92
British India (1921)	226·09	Canada (1921)	2·36
France (1921)	176·14	Commonwealth of Australia (1921)	1·82
Spain (1920)	109·55	South-West Africa (1921)	0·71
Basutoland (1921)	42·57	UNION OF SOUTH AFRICA (1921)	14·67
United States of America (1920)	35·50		

* Number of persons to the square mile.

6. **Distribution of Races in Urban* and Rural Areas.**—The table hereunder shows the distribution of races between urban and rural areas in the Union according to the returns at the Censuses of 1904, 1911, 1918, and 1921, the races being distinguished as European and non-European.

* An Urban Area is defined as an area included within any City, Borough, Municipality, Village Management, Health Committee, Township, or other local Board constituted under any law, and possessing some form of *urban local authority*.

The bulk of the non-European population resides in the rural areas of the Union, which term embraces all native reserves in the Union proper and in the Native Territories. The proportion of the non-European population enumerated in urban areas at the last three Censuses at which non-Europeans were included was as given in the table shown below. The reasons given above in regard to the areas considered urban at various Censuses apply in the same measure to the proportions of the non-European population as to the proportions of the European population. At the Census of 1911 there was a slightly greater proportion in urban areas than at the Census of 1921. The natural habitat of the Bantu is the veld or rural region, and the rate of increase is there entirely natural. The Bantu population, which forms the greater part of the coloured population, should therefore increase in the rural areas in greater numbers, and also in greater proportion than in the urban areas. This is borne out by the results of the Censuses of 1911 and 1921.

DISTRIBUTION OF POPULATION BETWEEN URBAN AND RURAL AREAS ACCORDING TO RACE AND SEX, 1904, 1911, 1918, AND 1921.

ALL RACES.								
1904....	—	—	1,199,725	—	—	3,976,099	23·18	76·82
1911....	923,491	554,377	1,477,868	2,145,901	2,349,625	4,495,526	24·74	75·26
1921....	1,014,460	721,335	1,735,795	2,522,532	2,670,253	5,192,785	25·05	74·95

7. **Proportions of Races in Urban and Rural Areas.**—Details of the proportions of the four main race divisions of the population in the urban and rural areas of the Union are given in the subjoined table as returned at the Census of 1921 :—

PROPORTIONS OF RACES IN URBAN AND RURAL AREAS, UNION, 1921.

Race.	Proportion Per Cent. of Each Race.			Percentage Distribution of Races.		
	Urban Population.	Rural Population.	Total.	Urban Areas.	Rural Areas.	Total.
European.....	48·83	12·94	21·93	55·78	44·22	100
Bantu.....	33·82	79·16	67·80	12·50	87·50	100
Asiatic.....	2·95	2·21	2·39	30·90	69·10	100
Mixed and Other	14·40	5·69	7·88	45·82	54·18	100
TOTAL.....	100·00	100·00	100·00	25·05	74·95	100

The percentage of the urban European population varied from 46·50 in Transvaal to 52·71 in the Orange Free State. The percentage of the rural European population presented marked contrasts, the Cape and Transvaal Provinces being almost on a level with 14·05 and 15·37 per cent. respectively, while Natal had only 4·42 per cent. and the Orange Free State had 23·37 per cent.

8. **Population Returns for Principal Towns.**—The following table gives a list of all towns (including suburbs) in the Union with a population of 2,000 Europeans and over as returned at the Census of 1921.

Columns have been added to show the relative order of the towns, according to their European populations, at the Censuses of 1911, 1918, and 1921. In 1911 there were 35 towns with a European population of over 2,000; in 1918 the number was 46; and in 1921 it was 54. Jagersfontein and Ficksburg, which in 1918 had a European population of more than 2,000, in 1921 fell below that number, and are not shown in the table.

PRINCIPAL TOWNS (INCLUDING SUBURBS) IN THE UNION CLASSIFIED ACCORDING TO THE NUMBER OF EUROPEAN INHABITANTS, CENSUSES 1911, 1918, AND 1921.

Town.	Province.	Population, 1921.					Relative Order, Census of—

* Below 2,000. † Not then constituted an urban area.

9. **Population of each District in the Union.**—The numbers of Europeans and non-Europeans in each district in the Union as returned at the Census of 1921, and the area in square miles of each district will be found in the District Statistical Summary. A table giving the population returns for each district at the Censuses of 1911 and 1921, and also the density of population in the rural portions of the districts in 1921, was included in the previous issue of this *Year Book*, but is not repeated owing to considerations of space.

10. **Distribution of Non-European Population.**—The subjoined table shows the distribution of the non-European population of the Union between urban and rural areas, according to the Censuses of 1911 and 1921 :—

DISTRIBUTION OF THE NON-EUROPEAN POPULATION OF THE UNION (CENSUSES), 1911 AND 1921.

17. **Official Languages Spoken.**—The Census of 1918 was the first occasion on which information was collected in regard to the number of Europeans speaking either or both of the official languages of the country. Similar particulars were obtained at the 1921 Census, and the following table summarizes the results in comparative form.

In both urban and rural areas a marked increase occurred during the three years in the number of people returning themselves as bilingual, the percentage increase being 46·70 in the urban areas and 11·87 in the rural areas. Of the whole population of the Union aged seven years and over 50·71 per cent. are bilingual, while 25·16 per cent. and 23·79 per cent. speak only English and Dutch respectively.

18. **Occupations of the People.**—At the Census of 1921 the system of classification of occupations was different from that followed at previous censuses. This is particularly the case in connection with commercial and industrial occupations which in 1921 were separately distinguished, whereas previously makers of and dealers in various commodities were classed together. As the significance of the data cannot be altogether appreciated without a considerable amount of explanatory matter, it has been considered advisable not to attempt a summary of these statistics of occupation in this *Year Book*. The full figures, accompanied by a comprehensive analysis, are published in the Report on the 1921 Census, to which reference should be made.

§ 3. Asiatic Population.

1. **Asiatics in the Union.**—The number of Asiatics in the Union as shown in the Censuses of 1904, 1911, and 1921 is given in the following table :—

ASIATIC POPULATION OF THE PROVINCES AND UNION—CENSUS YEARS 1904, 1911, AND 1921.

* Including "India"—so returned.

(ii) *Occupations of Indians.*—It is not possible to publish comparable figures in respect of occupations at the Censuses of 1911 and 1921 owing to a different classification being adopted at the latter Census. Moreover, in 1911 the tabulation included the whole Indian community, whereas in 1921 tabulation was confined to persons of fifteen years of age and over. The

following table gives the numbers of the Indian population of the Union of fifteen years of age and over classified according to their occupation as returned at the Census of 1921 :—

OCCUPATIONS OF THE INDIAN POPULATION OF THE UNION, CENSUS 1921.

Occupation.	Cape.		Natal.		Transvaal.		Orange Free State.		Union.

3. **Asiatics in the Union.**—Previous issues of this *Year Book* have contained particulars of the Asiatic population in each Province. Considerations of space have necessitated the omission of these paragraphs. The question is dealt with in some detail in the Report on the Census of 1921.

Under the Union *Immigrants Act,* 1913 (which is applicable to all classes and races), Asiatics, with the exception of wives and children of domiciled relatives, are prohibited from entering the Union, not *eo nomine,* but under a certificate of the Minister issued in terms of section 4 (1) (*a*). The provisions of the Act also restrict the movement of Asiatics to the Province in which they are resident.

The *Class Areas Bill,* which was introduced by the Government during the 1924 Parliamentary session, aimed at making provision for the reservation of residential and trading areas in urban areas for persons, other than natives, having racial characteristics in common, and was designed primarily to give the Government powers to enforce a measure of segregation of Asiatics in particular urban areas. The Bill met with a hostile reception from the Asiatic community. Owing to the dissolution of the House of Assembly in May, 1924, the Bill did not pass beyond the preliminary stages.

Dr. Malan, the new Minister of the Interior, introduced a recast Class Areas Bill, which was referred to a Select Committee, in the 1926 Session. A deputation from the Government of India, which visited the Union to study the conditions under which Indians were living, gave evidence before the Select Committee. As a result of the Committee's report, it was decided to postpone consideration of the Bill, and to discuss the whole question at a conference with the Government of India during the recess.

The Asiatic question in the Union has an Imperial context to which brief reference may here be made. The Imperial Conference of 1917 accepted the principle of reciprocity of treatment between India and the British Dominions in the matter of immigration. The Conference of 1918 elaborated the principle, and laid down that Indians already permanently domiciled in the other British countries should be allowed on certain conditions to bring in their wives and minor children. At the Imperial Conference held in 1921 the position of Indians in the British Empire was further discussed, and a Resolution was passed which, while approving the Resolution of the 1918 Conference on the subject, expressed the opinion that in the interests of the solidarity of the British Commonwealth it was desirable that the rights of British Indians to citizenship should be recognized. This Resolution was not accepted by the South African representatives, and the Indian delegates expressed the hope that by negotiation between the Governments of India and the Union the objections of the latter could be overcome. The question was again raised at the Conference of 1923, when the Indian representatives made certain proposals with a view to giving effect to the policy laid down in 1921. In the case of the Union, the suggestion was that the Union Government should agree to the Government of India sending an agent to South Africa who would protect Indian nationals there and act as an intermediary between them and the Union authorities. In rejecting the proposal, General Smuts on behalf of the Union stated that he could hold out no hope of any further extension of the political rights of Indians in South Africa. He defined the issue in the Union to be the question of economic competition, and not of race or colour, and declared that the white community in South Africa felt that the whole question of the continuance of western civilization in that country was involved in this issue.

Fuller information in regard to the Asiatic problem in the Union was published in previous issues of the *Year Book* (Nos. 1 to 4).

4. **Asiatic Inquiry Commission.**—A summary of the reports (dated May,1920, and March, 1921, respectively) of the Asiatic Inquiry Commission appointed in February, 1920, was given in the fourth and fifth issues of this *Year Book*. The Commission inquired primarily into the legal position arising from and affecting the acquisition of land by Asiatics for trading purposes and their trading activities generally.

§ 4. Immigration and Emigration.

1. **Immigration into South Africa.**—As one of the newer countries of the world, South Africa, since the days of the earliest settlements has received a more or less steady influx of immigrants, the volume of which was abnormally increased or decreased at certain periods by important events such as the discovery of diamonds and gold, and the period and aftermath of the South African War of 1899–1902, and the European War (1914–18). The records of the numbers in earlier years are not complete, and it was not until the year 1903, when the first *Immigration Act* was brought into operation in the Cape Colony, that accurate records began to be kept. The value of these figures as an index to the accession of population is discounted by the absence of corresponding figures for Natal and also of records of the departures from South Africa.

The year immediately following the South African war recorded a very large accession of population; but for several years following there was a reaction due to a severe commercial depression and there was undoubtedly a considerable loss of European population. A change in the direction of flow again occurred in the year 1910, when the country once more received an accession of population from oversea. The period of the European war was marked by a considerable diminution in the flow of immigration. There was a revival after the cessation of hostilities in 1918, and in the two or three succeeding years, there was a fairly large influx of immigrants. The movement was, however, checked as a result of the economic depression which commenced towards the beginning of 1921.

It was not until the passing of the *Immigrants Act*, 1913, that legislation and statistics of arrivals from abroad became uniform in the two coastal Provinces. This Act, however, gave no authority for recording or in any way dealing with departures from the country.

2. **Statistics of Migration.**—(a) *Prior to* 1918.—The Union is bounded on the east, west, and south by oceans, but it has also extensive land borders of many thousands of miles, and it was not until the latter part of 1914 that figures were recorded in respect of the movement of population other than by sea, and then only *via* Mafeking to and from Rhodesia by railway. The following year this was extended to the railway border station of Komatipoort on the Union-Portuguese East Africa border.

(b) *Returns under the Statistics Act.*—From the 1st January, 1918, statutory powers were given to the Director of Census to collect information in regard to all persons entering or leaving the Union *via* the sea and land borders. The method of collecting the statistical data is to enumerate all travellers by means of a special statistical form. In the case of seaports the Immigration Officers are responsible for the enumeration, while travellers *via* the land borders are enumerated either by specially appointed railway officers or by the police stationed at or near drifts and other places of entry or exit. During the first four months of the year 1918, every person crossing the border by rail was enumerated, but owing to the heavy traffic and consequent delay and inconvenience, it was decided by the Statistical Council that as from the 1st May only those persons who were travelling with single journey tickets should be enumerated. The figures for the year 1918 were somewhat affected by this change of procedure.

The regulations framed under the Act exclude the enumeration of aboriginal natives of the Bantu race. Therefore, statistics only account for Europeans, Asiatics, and coloured persons of mixed race.

(c) *Revised Scheme of Collection*, 1924.—Changing conditions and the experience gained during the past few years revealed certain limitations in the system, and after careful consideration the method of collection was revised, so that from the 1st January, 1924, the figures were subjected to greater analysis and additional particulars became available. The most important feature of the revised method is the isolation and the separate tabulation in the statistics of the large number of persons "in transit" *via* the Union. The peculiar geographical situation and the development of the ports and railways of the Union have placed the country in a favourable position in this respect, and there is now a considerable amount of traffic *via* Union ports and railways of persons passing to and from Rhodesia, Belgian Congo, South West Africa and the Portuguese Province of Mozambique.

At coastal ports there is also a certain amount of transhipment for East African ports, India, Australia, etc. It is now possible to deal separately with this class of migrant and also to ascertain the number of persons on holiday or business visits to and from the Union. Another feature of the new method is the abolition of the statistical form for persons arriving by sea. All statistical particulars in respect of these immigrants are ascertained from the Passengers' Declaration Form (D.I. 10) required in terms of the *Immigration Act*, 1913, to be completed in respect of all passengers landing in the Union from overseas. This form is also required in respect of all entrants into the Union *via* the Portuguese port of Lourenco Marques.

The tables in this section have been entirely recast in accordance with the more detailed information now available.

The following series of tables (i) to (iv) give a summary of the Union statistics of immigration from 1920. The figures for previous years will be found in earlier editions of this *Year Book* (Nos. 1 to 7) to which reference may be made. In certain tables, the latest available figures have been inserted at the time of preparation for publication.

Tables Nos. (ii) and (iii) record the arrivals and departures *via* seaports from the year 1920. The figures for new arrivals prior to 1st January, 1924, included business and holiday visitors; but subsequent to that date the figures represent the number of new arrivals who indicated their intention to settle in the Union. Similarly, the permanent departures now record only domiciled South Africans who leave the Union with the intention of not returning.

(ii) NUMBER OF PERSONS ARRIVED BY SEA, 1920 TO 1925. (ALL RACES.)

YEAR.	Total Persons Allowed Entry.	Old Residents Returning.	NEW ARRIVALS.*			Number Refused Entry.
			Total.	Male.	Female.	
1920.....	43,719	21,624	22,095	11,795	10,300	137
1921.....	42,926	21,993	20,933	10,911	10,022	363
1922.....	32,518	19,283	13,235	6,890	6,345	355
1923.....	29,498	17,857	11,641	6,161	5,480	492
1924.....	34,430	18,021	5,606	2,915	2,691	383
1925.....	28,091	†17,612	5,760	3,253	2,507	—

* From 1st January, 1924, the figures record new arrivals assuming domicile only.
† Includes old residents returning *via* land borders.

(iii) NUMBER OF PERSONS EMBARKED AT PORTS OF THE UNION, 1920 TO 1925 (ALL RACES).

YEAR.	Total Embarked.	Residents Leaving Temporarily.	PERMANENT DEPARTURES.*		
			Total.	Male.	Female.
1920	29,945	20,099	9,849	5,568	4,281
1921	33,618	20,142	13,476	7,771	5,705
1922	32,429	19,754	12,675	7,309	5,366
1923	31,776	19,110	12,666	7,239	5,427
1924	32,305	18,860	5,648	3,180	2,468
1925	27,373	†18,758	4,888	2,773	2,115

* From 1st January, 1924, the figures record only domiciled South Africans relinquishing domicile.
† Includes residents leaving temporarily *via* land borders.

Table (iv) records the number of persons travelling by rail on single journey tickets via the land borders. The figures exclude the " in transit " traffic through the Union.

(iv) ARRIVALS AND DEPARTURES BY RAIL, 1920 TO 1925. (EXCLUDING " IN TRANSIT.")

YEAR.	EUROPEANS.			ASIATICS AND OTHERS.			Total.

1925	1,524	512	691	11	531	13	3,282

The following table (v) shows the number of persons enumerated, and not the number of persons who entered or left the Union. The difference is accounted for by the method of enumeration at Mafeking, Komatipoort, and Nakop, the three railway border stations, where persons entering or leaving the Union with *single journey railway tickets only* are counted.

Under the new method of enumeration, all persons are asked to state the exact reason for entering or leaving the Union. The movement of all persons, including those in transit, is shown below according to race, and in detail for Europeans, giving the reasons in tables (i) and (ii) of paragraph 3.

3. **Migration of Europeans.**—Tables (i) and (ii) show the reasons given by all European migrants for entering or leaving the Union. The column headed "In transit through the Union" shows the number of persons enumerated who pass through the Union to and from countries or territories beyond its borders. These figures are excluded from the detailed tables for the Union.

This analysis eliminates the purely temporary visitors and South African holiday-makers from the figures, and shows the actual accessions to and losses from the domiciled population.

The following table (iii) shows the nationality of all Europeans who entered the Union during the year 1924. The column showing the number and nationality of South Africans returning to the Union after a temporary absence has been omitted from the table for convenience. The majority of the latter were either British or British naturalized subjects. In the previous issue of this *Year Book* a table was given showing the nationality of all new arrivals, whether settlers or visitors, for a series of years. As the figures are not comparable with those for 1924, the table has been omitted. The following table has been arranged to give a geographical grouping of nationalities.

(iii) NATIONALITY OF ARRIVALS DURING 1924.—EUROPEANS. (EXCLUDING "IN TRANSIT.")

NATIONALITY.	MALE.				FEMALE.

NOTE.—The total "All Arrivals" includes South Africans returning after temporary absence not separately shown.

Table (iv) shows the movement of male immigrants and emigrants according to usual occupation and country of previous abode or of destination. Comparison with previous years is not possible owing to the adoption of a different occupation classification and also the elimination of visitors from the new arrivals.

Table (vi) shows the number of Europeans of South African birth who relinquished domicile during the year 1924. This is the first time that such information has been made available. As will be seen, a high proportion of the numbers were children under 16 years of age. Many of these, no doubt, were children of parents one or both of whom were not born in South Africa. The high proportion of married women, when compared with married men, would appear to indicate that a considerable number were married to husbands not South African born. On the other hand, a considerably lower proportion of unmarried South African born adult females left the Union than of unmarried adult males of South African birth.

The following table (vii) shows the number of Europeans who stated that they were "in transit" through the Union. There is now a considerable traffic over the South African railways of persons passing through the Union to and from Rhodesia and the Belgian Congo. The extension of railways into the Congo, and the mineral development of that region, have increased the "in transit" traffic within recent years. It must be understood that the figures for the land border ports do not represent the full traffic, but only those persons who were travelling on single journey railway tickets.

4. **Non-European Migration.**—The following tables (i) and (ii) show the movement of the non-European population. The number of Asiatics who relinquished domicile during the year 1924 exceeded by 599 the number who came to take up permanent residence, while the number of other non-Europeans who left permanently balanced the number of new immigrants.

During the year an alteration was made in regard to the method of enumerating Asiatics passing to and from Komatipoort. The inward migration is uneven in its distribution. This is due to large numbers entering periodically a day or so after the arrival of a British India Steam Navigation boat at Delagoa Bay. The outward movement is uneven for the same reason. Owing to the many difficulties encountered in endeavouring to effect full and accurate enumeration, it was decided to relieve the Railway Administration of the enumeration of Asiatics at this border station, and to confine the enumeration to Europeans and coloured persons travelling on single journey railway tickets.

The Principal Immigration Officer, Pretoria, has a record of all permits issued to Asiatics leaving the Transvaal *via* Komatipoort, and officers of the staff of the Union Agent, Lourence Marques, issue permits to all Asiatics entering the Union *via* Komatipoort. Through the courtesy of these officials, the Census Office obtained statistical data sufficiently detailed to compile tables of non-European migration. For the current year statistical information is being supplied monthly by the Principal Immigration Officer, Pretoria, in regard to departures, and by the Immigration Officer, Komatipoort, in regard to arrivals.

It should be noted that the statistics differ in one respect from those previously obtained by direct enumeration. Whereas previously the figures were in respect of Asiatics travelling on single journey railway tickets only, they now record the movement over the border of all Asiatics. The statistics for Asiatics crossing the border at Mafeking and Nakop are still of single ticket passengers, but, as will be seen from the tables, the traffic at these places is negligible. All Asiatics departing and arriving *via* Durban are enumerated. The new arrangement thus gives a very comprehensive survey of the movement of the Asiatic population *via* the two main ports of entry from India.

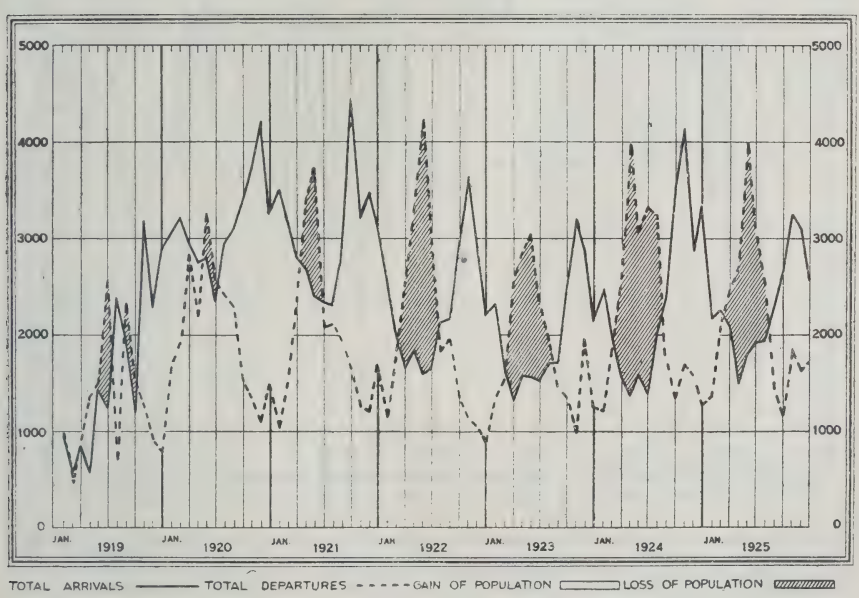
5. **Assistance and Regulation of Immigration.** – (i) *General.*—At various times the Government has given state-aided passages from England to Europeans, but this assistance has been limited almost entirely to female domestic servants, and the wives and families of Europeans settled in the country. On the other hand, no obstacle is placed in the way of the entry of white immigrants, provided that they are of good health and character, and are able themselves or through their friends or employers to show that they have means of support. Experience has shown the necessity for these requirements, as the circumstances of the country do not render it always easy for a new arrival to make his way, unless on the one hand he is a thoroughly competent tradesman, or on the other hand has work definitely assigned to him or friends who are able to introduce him to employment and in the meantime to assure him of support. Particularly is it difficult for an immigrant to procure employment who is without a trade, or who has indifferent trade qualifications, or is not specially qualified in some other capacity. It is therefore essential that persons of such a type should be able to show on arrival that they have means of support until they may be able to secure work. For this purpose the sum of £20 is prescribed as ordinarily sufficient; though in many cases a smaller sum and in certain cases no sum at all is looked for; while on the other hand in exceptional circumstances an even higher figure may be required.

ARRIVALS INTO AND DEPARTURES FROM THE UNION OF SOUTH AFRICA OF EUROPEANS.

(GROSS FIGURES, EXCLUDING "IN TRANSIT" PASSENGERS),

JANUARY, 1919, TO DECEMBER, 1925.

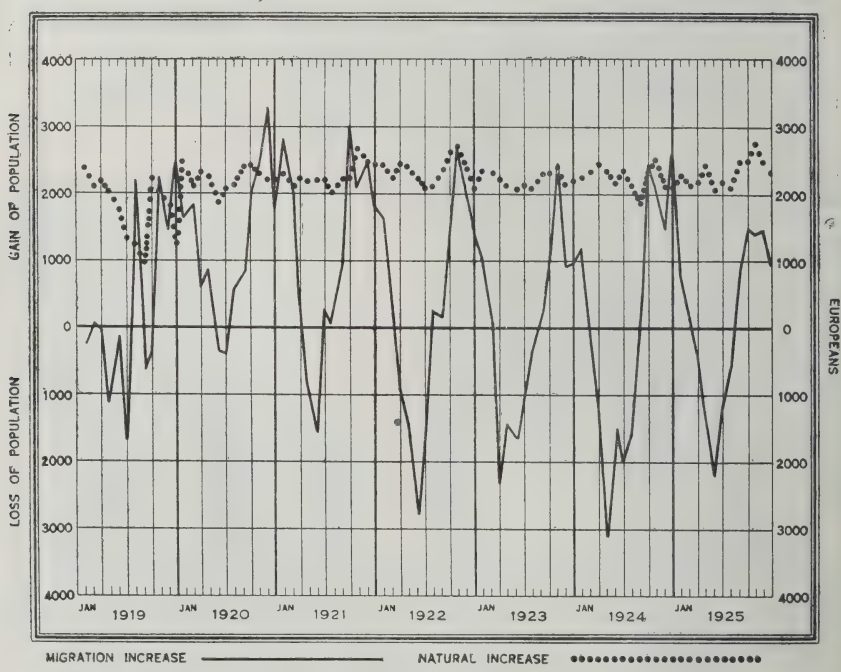


(ii) *Prohibited Immigrants.*—By the *Immigrants' Regulation Act,* No. 22 of 1913, the Immigration Department of the Union is empowered to regulate the entry of immigrants, and certain classes of persons denominated *prohibited immigrants* may be excluded or even extruded from the country; or their residence may be circumscribed as to time and in other respects. Amongst such classes are persons who have been convicted of serious crime; persons of ill-fame; persons who are insane, diseased, including those who suffer from tuberculosis or are otherwise physically afflicted. Persons likely to become a public charge, and in some cases illiterate persons are also regarded as *prohibited immigrants*; while by section 4 (1) (*a*) of the Act the Minister of the Interior is empowered to certify as *prohibited immigrants* persons, or classes of persons, whose presence for

economic or certain other reasons is considered undesirable. For the operation of this clause as affecting Asiatic immigration reference may be made to § 3 (3) of this Chapter.

Very full powers of restriction, arrest and detention are given to Immigration Officers, who are stationed not only at the ports, but at a number of places within the territory or at the borders of the Union. Any person so arrested or restricted has, however, the opportunity of appearing before one of the *Appeal Boards*, of which three have been constituted, viz.: at Pretoria, Durban, and Cape Town. These centres are the headquarters of the three Principal Immigration Officers of the Union, each of whom has control over the administration of a Province, the Province of the Orange Free State being under the jurisdiction of the Principal Immigration Officer, Natal.

MONTHLY NATURAL AND MIGRATION INCREASE OF THE EUROPEAN POPULATION, JANUARY, 1919, TO DECEMBER 1925.



EXPLANATION OF GRAPH :—The space between each vertical line represents three calendar months, and between each horizontal line 1,000 persons. The graphical lines below the heavy zero lines indicate decrease of population. The migration increase is the difference between gross arrivals and departures, and the natural increase the excess of births over deaths.

(iii) *Previous Immigration Laws.*—The *Union Immigration Act* repealed the Immigration Acts in force in the various Provinces, exercise of control over the entry of undesirable immigrants having been for a long period recognized as necessary :—in Natal from the year 1897; in the Transvaal and Orange Free State, from the year 1902, when the *Peace Preservation Ordinance* was passed [following the period of the war (1899-1902) during which military rule had given the necessary powers]; and in the Cape Colony from the year 1903, when the first *Immigration Act*, No. 47 of 1902, came into operation.

(iv) *Restrictive Effects of the Law.*—The tables given below show the number of those seeking admission whose entry was prohibited or movements restricted :—

TOTAL	150	111	1	2	14	39	317

In respect of the persons restricted it is necessary to note that the actual number stopped is no real index of the restrictive operation of the law as protecting the country from undesirable entrants. The principal effect is undoubtedly deterrent. The shipping companies, mainly to protect themselves and partly also to save prospective passengers from a long and fruitless journey, refuse to carry persons clearly coming under the denominated classes of *prohibited immigrants.* It has also to be remembered that vessels carrying certain classes of crews are carefully guarded in order to prevent desertions —a precaution which experience has shown to be of importance.

(v) *Land Border Immigration.*—Immigration officers are stationed at the points of entry by rail into the Union from Mozambique at Komatipoort and at Mafeking from Rhodesia. The authorities of the latter colony also render certain valuable assistance in checking illicit immigration. It has now been found possible under the *Statistics Act* of 1914 to examine passengers entering the Union at the land borders in the same way as at the ports (see paragraph 2 *supra*).

6. **Permits.**—Under the *Immigrants Regulation Act* provision is made for the issue by an immigration officer of a permit, described as a *certificate of identity*, to any person proving lawful residence in the Union who, intending to leave the Union, desires some assurance as to his title to return to the Union without coming under the restrictive operation of the Act. The fee charged is 2s. 6d. Photographs and means of identification are required. The duration of such certificates is limited to three years. Holders of these documents who do not return to the Union within the currency of the certificates, may be required to undergo the tests imposed by law; and may ordinarily be taken to have abandoned any domicile they had previously acquired in the Union. Permits are only ssued to any persons who are within the Union.

7. **Passports.**—Passports are issued to persons in the Union who are natural-born British subjects, to their wives (and widows), and to persons who have been naturalized in the United Kingdom or in the Union. Application is made on a prescribed form to the Department of the Interior, and photographs and evidence of identity and status are essential. From the 1st December, 1924, the initial availability of passports was extended from two to five years, and they may thereafter be renewed for any period from one to five years, but in no case may the validity of a passport be extended beyond ten years from the original date of issue. The fee for a passport is £1, and a fee of 2s. is charged for each renewal or visé. The fact that owing to conditions arising from the War every person travelling abroad must now be in possession of a passport, explains the largely increased number issued since 1914, as indicated in the subjoined table. As to certain limitation of the issue of passports to naturalized persons, see § 5 (2) of this Chapter.

British passports, with a few exceptions, are valid for travel throughout the British Empire; consequently the holder of a British passport may travel from one part of the British Empire to another without a fresh endorsement at the commencement of each journey, providing the validity of the passport has not expired. The permits to travel to Portuguese East Africa are also valid for any number of journeys between that territory and the Union during a period of one year from the date of issue.

§ 5. Naturalization of Aliens.

1. **Legislation.**—The *Naturalization of Aliens Act*, 1910, was one of the first laws passed by the Union Parliament in its first Session. Particulars are given hereunder regarding (i) the qualifications which an alien must possess to render him eligible for naturalization. (ii) the procedure to be followed, and (iii) the expenses which it is necessary to incur in obtaining a certificate of naturalization.

(i) *Qualifications.*—To be eligible for naturalization an alien must satisfy the following conditions :—

(1) He must have attained the age of twenty-one years.

(2) (*a*) He must within the five years immediately preceding the date of his application for naturalization have resided for a period of not less than two years in the Union (or in any Colony or territory included at the date of his application within the Union) ; or

(*b*) he must have been in the service of the Crown.

(3) He must be of good character and repute.

(4) He must intend, if naturalized, to reside in the Union, or to serve under the Crown in the Union.

(ii) *Procedure.*—An alien desiring to be naturalized must apply on a prescribed form. This form, and the two other forms necessary, can be obtained free of charge on application to the Department of the Interior. The first step is for the applicant to publish in the *Union Gazette* his notice of intention to apply for naturalization. The form of this notice containing particulars as to how it should be published is supplied with the form of application. The next step is to procure a certificate of good repute from a Magistrate, or a Justice of the Peace, to whom the applicant is personally known. No such officer will sign this certificate unless the applicant is so known to him. The form of certificate of repute is supplied with the form of application. The applicant must then complete the form of application and declare its accuracy before a Magistrate or Justice of the Peace. The form of application, so completed, with the certificate of repute attached, must then be sent to the Secretary for the Interior at Pretoria. If the application is approved by the Minister, the applicant will receive a form of declaration of allegiance, which he must sign before a Magistrate or Justice of the Peace of the Union, and return to the Secretary for the Interior, and on receipt of the declaration of allegiance a certificate of naturalization may be issued.

(iii) *Expenses.*—The expenses which it is necessary to incur in obtaining a certificate of naturalization are :—

	£	s.	d.
(1) Cost of publication in *Union Gazette*	0	5	6
(2) Revenue stamp on form of application.....	1	1	0
(3) „ „ certificate of naturalization..	2	10	0
TOTAL.....	£3	16	6

2. Effect of Naturalization under the Union Law.—A person naturalized under the Act of 1910 becomes entitled in the Union to all the rights, powers, and privileges, and subject to all the obligations of a natural-born British subject in the Union, unless the law provides otherwise. The wife of a person naturalized under this Act acquires in the Union the same status of a naturalized British subject as her husband. The children of a person naturalized under this Act who, while under the age of twenty-one, become resident with their father or mother in the Union are deemed to be naturalized under this Act. A person naturalized in the Union is only while in the Union entitled to the privileges, and subject to the obligations, of a British subject. He cannot, therefore, by virtue of his naturalization in the Union, claim the rights of a British subject in the United Kingdom or in any British Dominion or Colony other than the Union of South Africa. At the same time, all persons, wherever born or naturalized as British subjects, are regarded generally as coming under the protection of the British Empire in relation to foreign States ; except that a person naturalized as a British subject is not regarded as a British subject when he is within the limits of the foreign state of which he was a subject previously to obtaining British naturalization, unless he has ceased to be a subject of that State in pursuance of the laws thereof or in pursuance of a treaty to that effect. For this reason a naturalized British subject will not be entitled to receive a British passport available for the country of his origin. Certificates of naturalization as British subjects were not granted during the continuance of the War to subjects of Allied countries of military age unless documentary evidence was produced that they had fulfilled the military obligations of their country or had secured exemption therefrom.

3. **Number and Particulars of Certificates Issued.**—The table given below enumerates the Certificates of Naturalization issued for a series of years :—

CHAPTER XXV.

VITAL STATISTICS.

§ 1. Registration of Births and Deaths.

1. **System of Registration.**—Until the year 1923 a different series of laws relating to the registration of births and deaths was in force in each of the Provinces, making the co-ordination of registration difficult and greatly restricting the value of the vital statistics of the Union. In 1923 the *Births, Deaths, and Marriages Registration Act* (No. 17), consolidating and amending the laws in force in the various Provinces, was passed and brought into operation as from 1st January, 1924.

The main features of the Act are as follows :—

Provision is made for the apointment of a Registrar for each of the four Provinces; but one Registrar-General for the whole Union may be appointed. District Registrars are appointed for each Magisterial District, and where not specially appointed, magistrates will *ex officio* be Registrars for their respective districts.

A distinction is drawn between urban and rural areas. The former is defined as including an area under the jurisdiction of municipal councils, borough councils, town councils, village councils, town boards, local boards, village management boards, and health committees, but may include other areas at the discretion of the Minister. Except for the latter proviso, this definition is identical with that adopted by the Census Office for tabulating the Population Census.

Registration is compulsory for all races of the population in urban areas. In rural areas natives may register voluntarily ; but for all other races registration is compulsory. The Governor-General, however, may make special regulations applicable to natives and by proclamation apply Chapter IV of the Act, relating to registration in areas other than urban, to aboriginal natives. The term *native* is defined as meaning a person both of whose parents belong or belonged to an aboriginal race or tribe of Africa including any person of mixed race living as a member of any native community, tribe, kraal, or location. Until such time as the Act is applied to Indian immigrants in Natal, Law No. 2 of 1891 (Natal) which provides for birth, marriage, and death registration of Indians in that Province remains in force.

In urban areas the time limit for reporting a birth is 7 days and for a death twenty-four hours. Information concerning a birth or death must be given by a qualified informant, who must appear personally before the Registrar of the district in which the event occurred. In rural areas the prescribed period in which to register a birth or a death, is 30 days.

All deaths in urban areas must be certified as to the cause by a qualified registered medical practitioner. Without such certificate the district Registrar cannot authorize burial ; but must report the facts to the Magistrate, who will institute inquiries into the cause of death and, if necessary, hold an inquest.

A medical certificate is not ordinarily required in the event of a death in a rural area ; but, whenever a medical practitioner has attended a person during the last illness, he is required to furnish a certificate as to the cause of death, or of his inability to sign such a certificate.

Deaths occurring on shipboard in Union ports or waters or in transit to Union ports require to be registered at the first Union port of call ; but only births of children whose parents reside or intend to reside in the Union require to be registered.

Provision is also made for the transmission by Marriage Officers of the duplicate original copy of a marriage register to the Registrar of the Province in which the marriage took place for record.

The Act empowers the Governor-General to promulgate regulations—

(1) for the management of Registrar's Offices or district registration offices;
(2) prescribing the duties or powers of registrars and district registrars;
(3) prescribing the nature and extent of information respecting births, deaths, and marriages;
(4) prescribing the necessary forms, certificates, and registers to be used;
(5) prescribing the fees payable for searches, certificates issued, and for acts performed under the provisions of the Act.

Full particulars of the systems of registration formerly in force in the various Provinces of the Union were given in the fourth and previous issues of this *Year Book*.

The registration of births and deaths of Europeans may, for all practical purposes, be said to be complete throughout the Union.

The provision in Act No. 17 of 1923 for voluntary registration of native births and deaths in rural areas has resulted in fewer registrations than formerly.

Section 133 (1) of the *Public Health Act*, No. 36 of 1919, provides that the Minister of Public Health may, when so requested by a local authority, make regulations requiring the father of any child if he is residing with the mother when the child is born, or, in his absence, the person attending on the mother at the time of or within six hours after the birth, to report the birth forthwith to the local authority with such details as may be prescribed by the regulations.

2. **Periods of Tabulation.**—It has been the practice in the Union, in common with all other countries, to tabulate vital statistics for the *calendar year*. The records for past years in the Statistics Office are all for period 1st January to 31st December, and they have been built up for a series of years, thus making a useful comparative history of the vital events of the population. The tables given in this chapter are tabulated on this basis and thus afford a ready comparison with the vital statistics tabulated and published by other Dominions and countries. The Union Department of Public Health, however, has adopted for the purposes of health reports a Union *health year*, which runs from 1st July in one year to the 30th June in the following year. This necessitates the tabulation of vital registrations half-yearly in order to effect comparison with the local health year, as well as for universal comparison. In addition to these two tabulation periods, the Statistical Office also collects and tabulates monthly preliminary figures for certain large towns, and quarterly figures for the Union and Provinces.

The following table shows the number of European births and deaths registered and the vital rates during the last six *health* years, and also the estimated European population at the middle of each year:—

VITAL REGISTRATIONS AND RATES PER 1,000, UNION HEALTH YEARS 1919–20 TO 1924–25.

EUROPEAN POPULATION.

Health Year.	Estimated Population, 31st Dec.	Births.		Deaths.		Infantile Mortality.	
		No.	Rate.	No.	Rate.	No.	Rate.
1919–20	1,488,165	41,463	27·86	17,301	11·63	3,546	85·52
1920–21	1,511,251	43,064	28·50	15,433	10·21	3,599	83·57

1924–25	1,624,123	42,473	26·15	15,994	9·85	3,167	74·57

§ 2. Births.

1. **Births Registered.**—The total number of births registered from 1911 of (*a*) Europeans and (*b*) non-Europeans is shown in the following tables for individual years from 1921 and grouped in quinquennial periods for years prior to the Census Year 1921*. The large increase in the Natal non-European figures for the years 1916 to 1920 is caused by the inclusion of Indian births not previously recorded, and the still greater increase in subsequent years by the addition of births of natives also. The registration law in the Orange Free State, prior to 1924, applied to Europeans only.

The significance of the figures in table (*b*) is purely administrative, owing to the incompleteness of the registration of births of native and coloured persons.

* The detailed figures up to the year 1920 will be found in previous issues of this *Year Book*.

REGISTRATION OF BIRTHS, 1911 TO 1925.

* For annual figures, see previous issues of this *Year Book*.

3. **Birth Rate and Proportion of the Sexes.**—The following tables (i) and (ii) show for Europeans during a period of years the birth rate per thousand of the estimated mean population, and the proportions of the sexes. The decrease in the rate in 1919 is attributable to the influenza epidemic in the preceding year; but from the year 1910, when the birth rate was 32·52, there has been a gradual decline with slight fluctuations, the rate for 1924 being the lowest yet recorded. As to the proportion of the sexes, the figures, when compared with other dominions and various European countries, show a slightly greater excess of male over female births. Owing to the small numbers on which in the Union these figures are based, the fluctuation is greater than in countries possessing a larger and more settled population.

For earlier years, reference should be made to previous issues of this *Year Book*.

Table (iii), showing the crude birth rates of various countries, was compiled from the latest available information. The figures for the Union and Provinces refer to the European population only.

(i) BIRTH RATE PER 1,000 EUROPEANS, 1918 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

Birth Rates in Various Cities.—The birth rates in certain foreign and British cities in various parts of the world for the year 1924 are given in the following table:—

(iv) BIRTH RATES PER 1,000—VARIOUS CITIES—1924.

City.	Rate.	City.	Rate.	City.	Rate.
Dublin	25·5	Amsterdam	20·0	Paris	15·9
Glasgow	24·1	Edinburgh	19·7	Oslo (Christiania)	14·9
Belfast	24·0	Durban	19·4	Vienna	14·9
Johannesburg	23·5	London	18·7	Stockholm	12·6
Cape Town	21·8	Copenhagen	18·6	Berlin	10·2
New York	21·6	Antwerp	17·4		
Warsaw	20·8	Buda-Pest	17·0		

Birth Rates in the Nine Largest Towns.—With the growth of population in the largest urban centres of the Union it has become possible to calculate vital rates for Europeans in these centres without obtaining the wildly fluctuating results which are usually found where the basic figures are small.

Rates and figures are also published for the non-European community of the large towns. Too much reliance, however, must not be placed upon these results in the case of the non-coastal towns, as this section of the population is a constantly changing one. Moreover, there is frequently a predominance of one sex, and those persons in the community who are employed as domestic servants generally are unmarried, or if married, are separated from their spouses. The rates are in a sense of little value, but have been inserted as a matter of record. The low non-European birth rate for Johannesburg is due to the large numbers of male natives in the population living in mine compounds. The figures for Pretoria and for other towns have been carefully checked and the variations can be satisfactorily explained. For example, it is found that the non-European population of Pretoria is principally Bantu and that the ratio of males to females is 3 to 1. Of the female population less than one-third are married women. Moreover, it is customary for native women to leave the towns and proceed to their kraals for confinement. The number of births registered is, therefore, small in proportion to the population upon which the vital rates are computed. These factors also influence the infantile mortality and general death-rate.

Cape Town, Port Elizabeth, and East London have a large mixed non-European population of a stationary type, who live in the towns in a similar manner to Europeans. The computed vital rates for these municipalities are probably reliable. The following table shows the birth rates in the nine largest municipalities in the Union :—

(v) NUMBER OF BIRTHS AND BIRTH RATES PER 1,000 IN NINE PRINCIPAL TOWNS IN THE UNION, 1923 AND 1924.

Town.	European Population (Mean 1924).	European.				Non-European.			
		1924.*		1923.		1924.		1923.

Johannesburg	159,891	3,755	23·48	3,888	24·79	1,738	12·63	1,738	12·77
Bloemfontein	18,318†	373	20·36	468	25·49	340	16·30	—	—

* Births to residents occurring outside municipal area included. Births to non-residents occurring within the municipal area excluded.

† These figures exclude inmates of mental hospitals and, in the case of Pretoria, the leper asylum and central prison.

4. **Births in Regional Divisions.**—The following table shows the number of births and the birth rate in six regional divisions of the Union. The divisions are non-administrative, but have been arranged as far as possible to accord with the variations in altitude, rainfall, and the different climatic conditions prevailing generally. Each division comprises a number of magisterial districts. A fuller description of the areas is given in Chapter XXIV.

The *coastal* regions, which contain a population of rather more than a quarter of the total European population show a consistently lower birth rate than the general rate for the whole Union. The *highveld* region, in which more than half the Europeans reside, has a birth rate very similar to that of the whole Union. Curiously enough, the *Transvaal bushveld*, which comprises many unhealthy districts, shows a high birth rate and a low infantile mortality rate (*vide* paragraph 16 in § 3.)

BIRTHS IN REGIONAL DIVISIONS—EUROPEANS, 1921 TO 1924.

Divisions.	No. of Births.				Birth Rates (per 1,000).			
	1921.	1922.	1923.	1924.	1921.	1922.	1923.	1924.

5. **Natural Increase.**—The number of births in excess of deaths, which showed a steady decline from 1911 to 1917, has more recently moved in an upward direction. The year 1918 was highly abnormal and cannot be considered for comparative purposes in this connection. Although the males born are more numerous than the females, the actual increase in the population from the excess of births over deaths is greatly in favour of the females. The male population of the Union exceeds the female, but there is a correspondingly greater number of deaths each year of the former. The masculinity of the population is, therefore, steadily declining. Table (ii) shows the comparative masculinity of the European population and of births and deaths for a period of years. Reference to the subjoined table (i) of natural increase shows that for three of the Provinces comprising the Union the excess of male births over male deaths is, generally speaking, less than female births over female deaths. The one exception is the Orange Free State, where the general tendency is the reverse. This is probably accounted for by the fact that this Province is almost entirely agricultural in character, and that, owing to the absence of hazardous industrial occupations, the risk of death to male life is very little greater than to female life.

The total excess of births over deaths of Europeans from the date of the constitution of the Union to the 31st December, 1924, was approximately 366,000.

(i) **NATURAL INCREASE—EUROPEAN POPULATION, UNION, 1911 TO 1925.**

‡ Ratio of death rate of males to death rate of females.

6. **Births in Urban and Rural Areas.**—The distribution of births in the urban centres and rural districts of the Union is shown in the following statement for a series of years. The table thus affords a ready means of comparison between the registrations in the towns and the country districts. The figures show that the births recorded in the former areas mark an excess over those recorded in the latter. This method of tabulating births according to the area of registration tends to show higher urban rates than is actually the case, as many rural residents come into the towns for accouchement. Under the laws in force prior to January, 1924, it was not possible to adjust the registrations according to the area of residence of the parents, but with the introduction of consolidating legislation in that year, a system of transfers to the area of residence of the parents was instituted and the following table shows for the year 1924 the urban and rural births adjusted accordingly. It will be seen that the urban rate is reduced by 3·40 per 1,000 and the rural rate increased by 4·59.

The detailed tabulation of birth statistics from 1st January, 1925, will be by area of residence only.

BIRTHS REGISTERED IN URBAN AND RURAL AREAS—EUROPEANS, UNION, 1911 TO 1925.

Year.	Urban Areas.				Rural Areas.				Total Persons.	General Birth Rate per 1000.
	Male.	Female.	Persons.	Birth Rate per 1000.	Male.	Female.	Persons.	Birth Rate per 1000.

* For annual figures, see previous issues of this *Year Book*.

7. **Plural Births.**—The number of plural births recorded during the year 1924 was 531, There were six cases of triple births. The number of each sex born alive was : 523 males and 515 females.

8. **Illegitimate Births Registered.**—The total number of illegitimate births amongst the European population registered during a series of years is shown in the following table. Figures for earlier years, both in this and the succeeding table, will be found in previous issues of this *Year Book* :—

(i) TOTAL ILLEGITIMATE BIRTHS REGISTERED IN THE UNION—EUROPEANS, 1918 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1918.....	557	52	266	59	934
1919.....	553	52	276	44	925
1920.....	519	47	273	52	891
1921.....	486	43	296	47	872
1922.....	593	44	278	57	972
1923.....	559	50	322	70	1,001
1924.....	593	76	339	65	1,073
1925.....	609	78	354	77	1,118

(ii) *Illegitimate Birth Rates.*—The table below shows the number of illegitimate births as a percentage of the total number of births registered in urban and rural areas respectively. The average shows the ratio of illegitimate births to be slightly more than 3 in every 100 in the towns and approximately 3 in every 200 in the country districts.

The Cape Province has consistently returned a higher percentage of illegitimate births in both urban and rural areas than any other Province.

The total percentage for the whole Union was 2·21 in 1913, 2·19 in 1914, 2·32 in 1915, 2·24 in 1916, and 2·31 in 1917. These percentages compare favourably with the rates as published by other Dominions and foreign countries.

PERCENTAGE OF ILLEGITIMATE BIRTHS TO TOTAL BIRTHS—EUROPEANS, 1918 TO 1925.

Year.	Cape.		Natal.		Transvaal.		Orange Free State.		Union.		
	Urban.	Rural.	Urban.	Rura.	Urban.	Rural.	Urban.	Rural.	Urban.	Rural.	Total.
1918.....	4·36	1·59	2·37	0·53	2·40	0·42	1·97	0·41	3·15	0·96	2·25
1919.....	4·54	1·80	2·43	0·51	2·50	0·65	1·44	0·45	3·21	1·13	2·33
1920.....	3·47	1·90	1·95	0·21	2·28	0·57	1·72	0·26	2·69	1·10	2·05
1921.....	3·66	1·38	1·25	1·32	2·38	0·75	1·29	0·47	2·68	1·02	2·01
1922.....	4·18	2·01	1·59	0·66	2·27	0·79	1·80	0·47	2·94	1·29	2·16
1923.....	4·03	1·82	1·67	1·26	2·60	1·26	2·07	0·69	3·06	1·43	2·37
1924.....	4·03	2·04	2·63	1·04	3·05	0·96	1·86	0·72	3·30	1·44	2·53
1925.....	4·95	1·80	2·75	1·19	2·97	1·14	2·69	0·72	3·71	1·38	2·58

The usual method of stating the number of illegitimate births as a proportion of the total births is not entirely satisfactory. The subjoined table shows the illegitimate births in 1921 in relation to the total unmarried European female population of child-bearing age. There is, however, no method of arriving at a correct estimate of this group of the population for any period except that of the census. The figures below are based upon the census figures of 1921 and the rates for the census of 1918 are inserted for comparison. The table also shows the legitimate birth rate in relation to the married European female population between the ages of 15 and 45 years.

ILLEGITIMATE AND LEGITIMATE BIRTHS PER 1,000 OF THE UNMARRIED AND MARRIED FEMALE POPULATION BETWEEN THE AGES OF 15 AND 45 YEARS—EUROPEANS, CENSUS, 1921.

Province.	Unmarried Female Population, 1921.	Illegitimate Births, 1921.	Rate per 1000.		Married Female Population, 1921.	Legitimate Births, 1921.	Rate per 1000.

§ 3. Deaths.

1. **Deaths Registered.**—The total number of deaths registered during the period 1st January, 1911, to 31st December, 1924, of (*a*) Europeans and (*b*) non-Europeans is shown in the subjoined tables. As is the case in regard to the number of births registered the fluctuations in the figures for the Natal Province in respect of non-European deaths are caused by the inclusion of registrations of deaths of Indians in 1912, and native registrations also in 1913 and later years, none of which events were previously recorded. The *Births and Deaths Registration Law* of the Orange Free State did not apply to natives and coloured persons.

In all the tables in this section the figures for the Natal Province prior to the year 1914 include persons of "coloured" or mixed race as well as Europeans, the number of coloured persons, however, being small.

TOTAL NUMBER OF DEATHS REGISTERED, 1911 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

* Figures include deaths "At Sea."
† For annual figures, see previous issues of this *Year Book*.

3. **Crude Death Rate.**—The simplest measure of mortality is the computation of the number of deaths per 1,000 of the population. This is known as the "crude" death rate, and furnishes a useful index to the healthiness or otherwise of the climate of the country and the condition of life of the community.

The records from the establishment of the Union up to 1917 show a fairly constant death rate, and the fluctuation in the figures was practically negligible. During that period there was indeed a slight tendency for the rate to improve; but subsequently the rate increased. The death rate for the whole population in the Orange Free State and the infantile mortality rate in Natal have been consistently lower than in the rest of the Union. The year 1918 was generally an exceptional one, owing to the heavy mortality caused by the influenza epidemic which broke out in the latter half of the year. The rates shown hereunder have been recalculated upon revised estimates of population according to the Censuses of 1918 and 1921 (*vide* paragraph 4 hereunder).

Figures for earlier years will be found in previous issues of this *Year Book*.

(i) CRUDE GENERAL DEATH RATES, EUROPEANS, 1920 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

4. **Specific Death Rates.**—The term Specific Death Rate used in the following table designates the rate of mortality per 1,000 of the population at specified ages. In previous editions of this *Year Book* the rates were based upon estimates which were calculated on the assumption that the numbers of each sex at each period of age were in the same ratio as disclosed at the preceding census. The following methods have now been adopted. For intercensal periods estimates are based on proportional ratios between two censuses, and for post-censal years estimates are adjusted according to the records of births, deaths, and migration, which are now available in greater detail than hitherto. The figures shown in the table for the years subsequent to 1918 are revised figures computed on the new basis. The rates have been calculated from the year 1912 and were published in previous editions of this *Year Book*. The following table shows the rates for five years from 1920:—

SPECIFIC, STANDARDIZED, AND CRUDE DEATH RATES—UNION, 1920 TO 1925.

5. **Specific Death Rates according to Marital Condition.**—The following table shows the death rates per 1,000 persons at each degree of marital condition at certain age groups. The table shows that from the age of twenty-five years onwards, when the majority of men begin to marry, the death rates for married men were considerably lower than for single men. On the other hand, the specific death rates for married females are higher at each age group from fifteen to forty-four years than for single females. After the child-bearing period the rates are generally a little higher for single females. The rates for widowed and divorced persons are of interest, but are liable to considerable fluctuation owing to the small numbers upon which the calculations are made.

Owing to difficulties in estimating population in groups according to marital condition for intercensal years, computations showing the effect of marital condition on specific death rates cannot be calculated for periods other than a census year. The average mortality, however, in each marital condition for three years—one year preceding and one year following a census year—will probably give a better index to the effect of marital condition on death rates, and will eliminate any excess mortality in one group that may be due to some peculiar seasonal variation. The figures in the table have been calculated on this basis for the years 1920 to 1922.

DEATHS PER 1,000 IN SPECIFIC AGE GROUPS ACCORDING TO MARITAL CONDITION, BASED UPON 1921 CENSUS RESULTS AND AVERAGED ON DEATHS OCCURRING IN THE UNION DURING YEARS 1920–22.

7. **Standardized Death Rate.**—The usual and simplest method of calculating the death rate of a country is by expressing the number of deaths as a proportion of each thousand of the estimated mean population, i.e. the *crude* death rate. Any error in the computation that may occur is most likely to arise through an over or under estimate of the population; but in a country like the Union, where a census is taken quinquennially, the population may be estimated for intercensal years with a fair degree of accuracy. An error may also occur if the system of registration of deaths is imperfect. Errors due to these two causes, however, will probably be negligible. Notwithstanding the criticism that has often been levelled at crude death rates, they are reliable and useful rates for most practical purposes. *Standardized* rates have a special and limited application.

A note on crude and standardized rates is contained in the sixth issue of this *Year Book*.

The *standardized* death rates for the Union given in the following table are calculated on the *standard million* of England and Wales and the rates are therefore adjusted for both age and sex distribution of the population.

For the purposes of comparison the *crude* death rate has also been inserted.

* Standard population of England and Wales of undistinguished sex, Census 1901.

8. **Standardized Death Rates for Towns and Sub-Divisions of the Union.**—The standardized death rates for the Union given in this book are calculated on the *standard million* of the population of England and Wales, 1901, and thus afford a direct comparison with the death rates of that country and with other countries using the same standard. An international standard, while useful for comparing the rates of one country with another, is, however, unsuitable when adjusted or standardized rates are required for local areas within a country. For this reason the population of the Union as enumerated at the Census of 1921 has been chosen as the standard for computing standardized rates for the Provinces, the largest towns, urban and rural areas, and the regional divisions into which the Union has been divided for the purposes of vital statistics. These rates enable the relative salubrity of each town or area to be compared on the same basis, each with the other or with the Union as a whole. In other words, the crude death rate of (say) Johannesburg is standardized for differences in age and sex constitution for comparison with the rate for (say) Cape Town with a similar age and sex distribution of its population, any difference in the two standardized rates being thus due to causes other than a preponderance of one sex or to a particular age group.

The method followed is known as the *indirect* or *factorial* method of standardization and is identical with that used by the Registrar-General of England and Wales for many years. Briefly, the method of computation is as follows: The mean annual death rates at certain age groups for the whole Union are applied to the population at the corresponding age groups as enumerated at the Census of 1921 for the town or area for which the standardizing factor is required. The results give the number of deaths that would be expected in a year if the rate of mortality of each age group were the same as that of the Union as a whole. From the sum of the products and the total population of the area or town in question is computed the *index death rate.* This index death rate indicates the degree to which the population of that particular area is favourably or unfavourably constituted. In the same manner an index death rate is computed for the Union and the relation of this rate to the index death rate of any other area or town gives the required standardizing factor.

The variations in the ages and sex constitution of the populations of the largest towns and regional divisions as revealed at the Census 1921 were shown in the series of graphs following Chapter III in *Year Book* No. 6. The graphs were of two types, one showing the proportionate distribution of each sex at quinquennial age groups compared with the curve of distribution of persons of undistinguished sex for the Union as a whole, and the other the percentage deviation of the number of males and females from each 100 persons in the Union population at corresponding age groups.

A comparison of these graphs with the crude and standardized death rates will indicate the reasons for the raising or lowering of the latter rate from the former.

The following table gives the standardized death rates for each of the Provinces of the Union during a period of years, on the basis of the Union population of undistinguished sex, Census of 1921. Figures for earlier years will be found in previous issues of this *Year Book*:—

9. **Deaths in Urban and Rural Areas.**—The registration of deaths of Europeans in urban centres and rural districts of the Union during a period of years is shown in table (i) hereunder. The number of deaths registered in urban areas is largely in excess of the number registered in rural areas. The columns giving the urban and rural death rates show that the urban rate is consistently higher than the rural rate. This is partly due to the fact that the deaths of many rural inhabitants occur in the larger towns, especially within public and private institutions.

Prior to 1924, it was not possible to adjust the registrations according to area of residence. Under the consolidating legislation, Act No. 17 of 1923, a system of transfers has been made possible, and Table (i) shows for the year 1924 urban and rural deaths adjusted accordingly. The urban rate is reduced by 1·74 per thousand and the rural rate increased by 2·35 per thousand.

From the 1st January, 1925, the tabulation of death statistics will be mainly by area of residence. The results of the Census of 1921 reveal the fact that the age and sex distribution of the population of urban areas is more favourable to a low crude death rate than that of rural areas. Allowance for this divergence in population is, therefore, made by computing standardizing factors based on the age and sex distribution of the standard population of the Union as it was shown to have been constituted at the third Union census in 1921.

* Based on standard population of Union of undistinguished sex, Census 1921.
† For annual figures see previous issues of this *Year Book*.

Deaths in Large Urban Centres.—Since the beginning of the year 1921, monthly returns of births and deaths have been collected from the nine largest municipalities in the Union, and the yearly registrations and death rates are given in table (ii) hereunder. The monthly rates are not shown in the table as it is found that, owing to the smallness of the figures upon which the rates are calculated, the latter show widely-fluctuating results from month to month, due to vital events in one month not being registered in the month of occurrence, or within the period prescribed by law.

The varying rates shown for the non-European population are due to several causes, the chief of which, except in the case of the first three towns, are the migratory nature of the populations, the unequal sex proportions and the peculiar age distribution due to the absence of young children and old persons. This latter cause is peculiar to the inland towns whose non-European populations are principally Bantu and not, as in the case of the Cape coastal towns, coloured persons of mixed blood who permanently reside in the towns. The particular effects of these population peculiarities are more fully explained in the section on births.

* Standardized for age and sex distribution to the standard population of the Union, Census 1921.
† These figures exclude inmates of mental hospitals and, in the case of Pretoria, the leper asylum and central prison.
‡ The deaths include residents who died elsewhere and exclude deaths of non-residents. The amended figure was used to compute the rates.

Death Rates in Various Cities.—The preliminary death rates for the year 1924 in various large cities throughout the world are given in the table hereunder. The rates for the three largest towns of the Union are included for comparison, and it will be observed that for that year the rate for Cape Town was 2·3, Durban 1·1, and Johannesburg 0·9 per 1,000 lower than the rate of London.

10. **Deaths in Regional Divisions.**—In this chapter, the majority of the figures are tabulated according to the four main administrative areas (Provinces) of the Union. The reason for this is that each Province until 1923 had its own Births and Deaths Registration Law, and tabulation has naturally followed according to the vital events registered under the respective laws. The boundaries of the Provinces follow generally the principal inland rivers or mountain ranges. For the purposes of vital and population statistics the Union has now been sub-divided into six regional divisions arranged as nearly as possible according to climatic conditions. A description of these divisions will be found in Chapter XXIV. These divisions are non-administrative, but each comprises a group of magisterial districts The boundaries, although somewhat arbitrarily drawn, follow closely the different climatic conditions found in the Union due to altitude, varying rainfall, etc. The following table shows the crude death rates for the past four years in each of the divisions. As the age and sex distributions of the several populations differ from each other, and from the distribution of the total Union population, the rates have been standardized to the Union standard population of undistinguished sex as at the Census of 1921, to eliminate differences due to these two causes. For ease of comparison the crude rates for the European population of the Union have been inserted.

DEATH RATES PER 1,000 IN REGIONAL DIVISIONS—EUROPEANS, 1921 TO 1924.

11. **Mortality of Each Sex.**—There are two methods of calculating the ratio of deaths of one sex to the other, or of male to female deaths. One is to calculate the actual number of male deaths to each 100 of the actual female deaths registered. The result gives a *crude ratio*, because it does not take into account the sex constitution of the population or, in other words, the relative numbers of each sex exposed. The second method is to calculate the ratio of the death rate of males to the death rate of females. This calculation eliminates the unequal distribution of the sexes in the population and thus reduces the comparison of the mortality of each sex to a *standard*. The results are given in the following tables under the headings *Crude Ratios* and *Standardized* or, as the ratios are calculated on the basis of males to females, *Relative Male Mortality*. This latter method shows at a glance at which ages the number of deaths of males exceeds that of females or *vice versa*. Table (i) and the first portion of table (iii) record the actual number of deaths of males to each 100 deaths of females according to the number of registrations of deaths effected. Tables (ii) and (iii) (*b*) show the relative male mortality for each 100 female deaths on a basis of an equal number of each sex exposed to risk.

It should be noted that similar figures for the years prior to these shown in the tables will be found in previous issues of this *Year Book*.

Taking the standardized figures as a truer index of sex mortality it will be seen that with few exceptions the number of deaths of males regularly exceeds that of females, the average excess for the years 1915 to 1924 being 21·9 per cent. for all ages. This average is increased slightly owing to the heavy male mortality during the influenza epidemic of 1918, when at ages from 15 years to 44 years the ratio was almost three male deaths to each two female. The figures for the years subsequent to 1918 differ from those previously published, having been recalculated on revised death rates for the reasons given in paragraph 4 of this section.

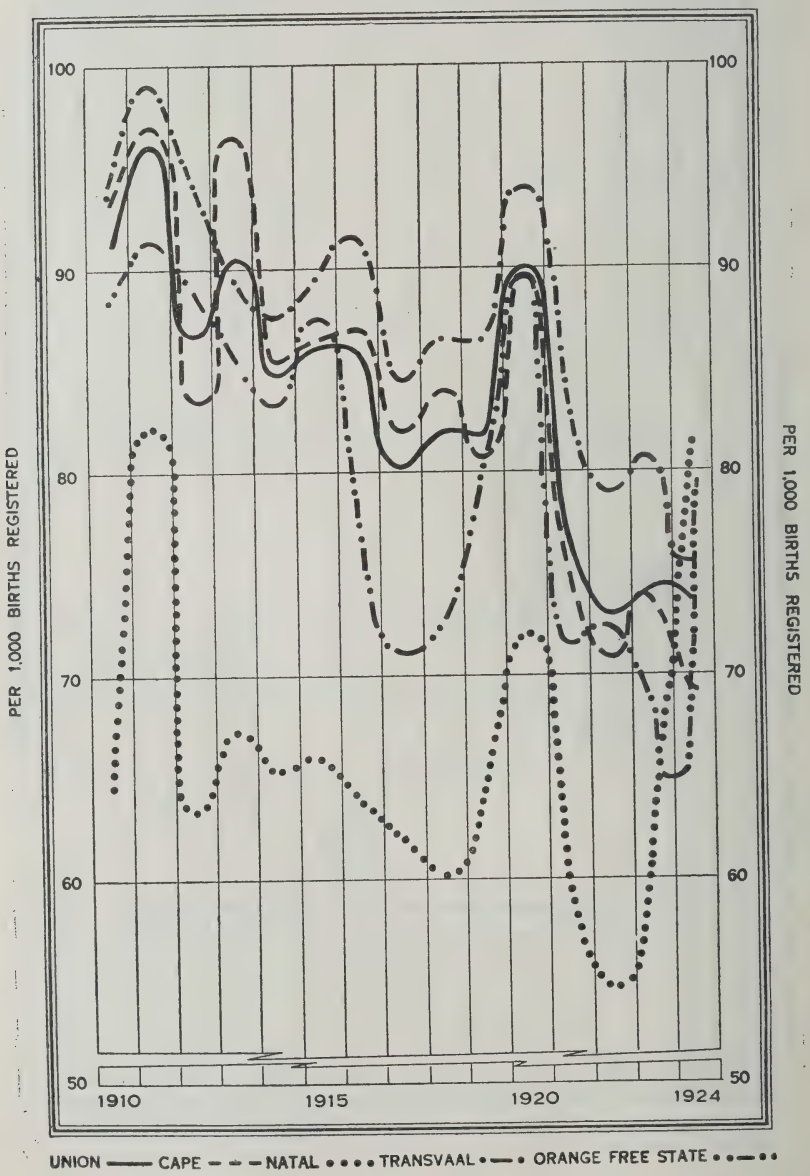
† Infantile mortality rates—Deaths of infants under 1 year of age per 1,000 births registered.

INFANTILE MORTALITY RATES—UNION, 1910 TO 1924.

PROPORTION OF DEATHS OF EUROPEANS UNDER ONE YEAR OF AGE PER 1,000 BIRTHS REGISTERED.



In table (ii) below, the excess in the mortality of males manifested itself at all ages throughout the period except ages 5 to 9 in the years 1923 and 1924, and at ages 10 to 14 in the year 1924, when it was less than the female mortality. The average for ten years at the 5 to 9 year age period gives a ratio of 101·8 male deaths to each 100 female deaths.

In table (iii) the masculinity of the deaths in each Province of the Union is shown for the period 1920 to 1924. The first portion of the table gives the crude ratios based on the number of deaths of each sex. As explained above this calculation takes no cognizance of the fact that there were more males than females exposed to risk of death. Had the distribution of the sexes been constantly equal, the resulting standardized mortality of males to each 100 females would have been as shown in the second portion of table (iii) under the heading *Relative Male Mortality.*

The effect of standardizing the sex mortality reduces the ratio of male to female deaths from 131·3 crude to 121·9 standard per annum over a period of ten years. The Transvaal, in which the masculinity of the population is approximately 109 to each 100 females, shows a decline in the sex mortality ratio from 143·9 crude to 128·1 standard. During the past ten years Natal has shown a consistently heavier proportion of male deaths to female deaths than the other Provinces of the Union, except in the year 1922, when it was 6·7 per cent. lower than the Transvaal. An average of 137·2 males die to each 100 females each year in Natal.

* Ratio of death rate of males to death rate of females. This method of calculation eliminates the unequal distribution of the sexes in the population.

12. **Mortality according to Marital Condition.**—The number of deaths during the period 1921 to 1924 according to sex and marital condition is given in the table hereunder. The number of deaths returned with the marital condition unspecified is small and has not been included. The chief value of such a table lies in its relationship to the number of persons living at each degree of marital condition; but unfortunately this information is not available except for a census year. The death rates in each degree of conjugal condition for the census year 1921 are given in paragraph 5, § 3, of this chapter.

13. **Infantile Mortality.**—The deaths and death rates of male and female infants have continued to show a steady improvement, the rate for the Union having decreased in 1924 to the extent of 17·51 per 1,000 births registered since 1910, when it stood at 91·24. The

year 1920, however, showed a set-back. Table (i) gives the relative rates of mortality for each sex and for urban and rural areas. The excess of males born each year has tended to disappear owing to the greater mortality among male infants during early childhood. During the period 1915–24 the excess of infant male deaths over females was 3,957, more than 26 per cent.

The distribution of the rates among the four Provinces shows that Natal, until 1924, when the rate rose to 80·06 from 61·01 the previous year, was consistently the healthiest Province in so far as infant life was concerned, whereas the rate in the Transvaal was almost always the highest. It is interesting to note that since the year 1910 the lowest rate recorded in the Union was during the year 1922. Table (ii) shows the provincial distribution for a period of years.

Figures for earlier years will be found in previous issues of this *Year Book*.

In the ten years 1915–24, an average of 87 out of every 1,000 male children and 73 out of every 1,000 females born in the Union died before attaining the age of one year. The chances of living during the first year of life are therefore greater for female than for male infants, the mortality of males being 1 in every 11 born and of females 1 in every 13 born. In the towns and villages of the Union an average of 88 out of every 1,000 children born died before reaching the age of one year; while in the farming areas of the Union the average number of infantile deaths was 70 out of every 1,000 births registered.

* European population only.

15. **Causes of Infantile Deaths.**—The principal causes of deaths of infants are given in the following table for a series of years. Diarrhoea and enteritis account for over 20 per cent. of infantile deaths each year, and during the period under review the number of deaths from these causes each month increased from October each year, reaching its peak during December, and falling away again during the month of March. The five months, October to February, which are the warmest months of the year, are therefore responsible for the high death rate from infantile diarrhoea.

16. **Infantile Mortality in Regional Divisions.**—The following table gives a comparison with the Union of the infantile mortality rate in six *regional* or *climatic divisions.*

The fluctuations in the rates recorded in the Cape Thornveld and Transvaal Bushveld may be due to some extent to the small population of these areas, and, therefore, to the small numbers upon which the rates are calculated. A very small increase or decrease in the numbers of either births or infant deaths causes a marked variation in the mortality rate. The most noticable figures in the table are the mortality rates of the Transvaal Bushveld. An average taken over the four years 1921–24 shows this area as recording the lowest infantile mortality rate with nearly the highest birth rate, an unusual occurrence, and also the lowest general death rate.

The *Bushveld* embraces large tracts of land which are very unhealthy during the malarial season, and it is surprising to find the vital rates other than one would naturally expect

from the climatic conditions prevailing. The explanation appears to lie in the fact that the population is largely migratory and that families trek to healthier parts during the hottest and also the fever months of the year. The probability is that a number of deaths occur and are registered in the *High Veld* or other regions, while the death rate is based upon the normal population, which at certain seasons is below normal. It is difficult to account for the high birth rate except that the seasonal distribution of births in the Union indicates that the greatest number occur during the healthiest months of the year, when the population of the region is normal. The large number of births and the small number of deaths recorded, both infantile and other, account for the low infantile mortality rate.

INFANTILE MORTALITY IN REGIONAL DIVISIONS—EUROPEANS, 1921 TO 1924.

17. **Infantile Deaths in Principal Urban Centres.**—Since January, 1921 a monthly statement has been received from certain District Registrars of Births and Deaths giving the number of registrations in the nine largest municipalities of the Union, with a view to building up a record of the seasonal variations of infantile mortality. The following table gives the figures for the years 1923 and 1924. The accompanying diagram gives a ready comparison between the towns.

The statistical records for the non-European population are also given in the table. Unfortunately, the race constitution, mode of living, age, and sex distributions of the several populations vary considerably and thus preclude any reliable comparisons being made, especially between inland and coastal towns. The nature of these peculiarities of population and their effect on vital statistics is more fully explained in a previous paragraph dealing with the non-European birth rates in these municipalities. Compulsory registration of non-European events only came into effect in Bloemfontein on the 1st January, 1924. The number of deaths shown in the following table therefore includes a number of infants whose births had never been recorded, and any rate computed on the figures would therefore be not only inaccurate, but misleading.

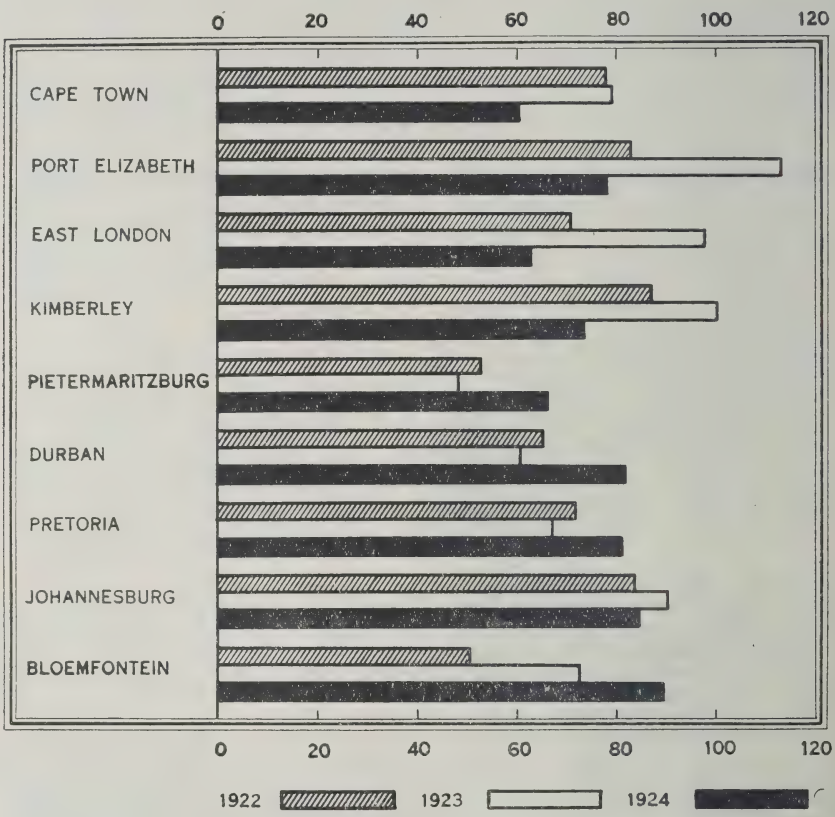
EUROPEAN RATES OF INFANTILE MORTALITY IN LARGE MUNICIPALITIES.



PROPORTION OF DEATHS OF INFANTS UNDER 1 YEAR PER 1,000 BIRTHS REGISTERED.

(ii) *Infantile Mortality in Various Cities.*—The following table is compiled from various sources and shows the infantile mortality rate in various large cities throughout the world for the calendar year 1924. The rates for three largest towns in the Union have been included for comparison and the figures show that of these Capetown recorded the lowest rate, 61 or 8 per 1,000 less than London, and 58 per 1,000 less than Glasgow.

(ii) INFANTILE MORTALITY RATES OF VARIOUS CITIES, 1924.

City.	Rate.	City.	Rate.	City.	Rate.
Amsterdam	34	Birmingham	80	Liverpool	102
Oslo	47	Antwerp	82	Belfast	107
Stockholm	50	Johannesburg	83	Berlin	109
Cape Town	61	Paris	88	Dublin (Registraton Area)	113
London	69	Edinburgh	89	Glasgow	119
Copenhagen	77	Manchester	97	Budapest	151
Durban	78	Vienna	99		

18. **Certified and Uncertified Deaths.**—There has been a steady improvement in the number of deaths certified by medical practitioners as compared with the uncertified deaths. In the year 1911 the percentage was 75·95. In 1914 nearly four-fifths of the total number of deaths registered were certified. In 1924 for both urban and rural areas the percentage of certified deaths was the highest yet recorded and Natal had no uncertified deaths in the urban areas.

The lowest percentage of uncertified events is in Natal, where, excluding Zululand, the density of the population is greater than in the other Provinces.

According to the Union registration law and to the old registration laws in the several Provinces there should be no uncertified deaths in proclaimed urban areas, but it frequently happens that in the smaller towns and villages deaths occur of residents well known to the community to have been suffering from long-standing diseases who have been unattended by a medical practitioner. If the local Registrar or Magistrate is satisfied that death resulted from natural causes in these cases, then an inquest is frequently dispensed with and the event recorded in the usual manner. The figures shown in the following table as uncertified urban events are mainly accounted for by such cases as these. When an inquest or magisterial inquiry has been held into the cause of death the event is recorded as a certified registration.

Figures for earlier years are given in previous issues of this *Year Book*.

During the year 1924 there were 846 inquests held in the Union, the figures for each Province being : Cape of Good Hope 275, Natal 141, Transvaal 348, and Orange Free State 82. This gives a ratio of 5·5 inquests for every 100 deaths registered. Of the 846 inquests, 662 were held on male decedents and 184 on female decedents.

19. **Ages at Death.**—In previous issues of this *Year Book* particulars have been given in some detail as to ages at death. Considerations of space necessitate the omission of these tables in the present issue ; but the subject is dealt with more fully in a special report dealing with vital statistics, and also in the Report on the Census of 1921 (Life Table and Mortality Rates).

20. **Classified Causes of Death.**—The Government of the Union is a party to the agreement executed in Paris on the 3rd July, 1909, by the International Commission which revised the *International Classification of the Causes of Sickness and Death*. From the 1st January, 1912, the *International Nomenclature* was adopted as standard throughout the Union for the tabulation of Vital and Morbidity Statistics, so that from that date the vital statistics of the Union are comparable with those of other countries using the same classification. The detailed statistics for the years 1912 to 1915 will be found in the *Statistical Year Book* of the Union Nos. 1, 2, 3, and 4, and for years 1916, 1917, and 1918 in *Statistics of Population* [S.P. 3], [S.P. 7], and [S.P. 24] respectively.

In the first two issues of this publication the causes of death were shown grouped in fourteen categories, but the tables have since been recast and the figures shown for the year 1922 and previous years in more useful form by the adoption of the *International Abridged List*, supplemented by the addition of certain causes of special interest to the Union, such as miners' phthisis, silicosis, and plague.

It is interesting to note that other countries using the *International Abridged List* have also found it convenient to amend the original list to suit local conditions, and Australia, the United States, and England and Wales are all using different abbreviated nomenclatures, which, at the same time, are comparable in respect of the principal diseases.

The table hereunder shows the number of deaths registered in the Union for the years 1920 to 1924.

* There were 3,364 Uncertified Deaths in 1920, the detailed causes of which are not available.

† Miners' Phthisis. Silicosis combined with Pulmonary Tuberculosis included with Pulmonary Tuberculosis above.

‡ Included in Pulmonary Tuberculosis.

21. **Deaths from Tuberculosis.**—The following tables relating to the mortality from tuberculosis show only the certified deaths. As given under the heading "Certified and Uncertified Deaths," the proportion of uncertified deaths is so high, averaging 22 per cent. of the total registrations, and the causes of death returned by informants of uncertified deaths are so unreliable that it has been found possible to tabulate only the certified causes.

Table (i) hereunder gives the number of Europeans who died from tuberculosis in the Union during seven years, and the number of deaths per 100,000 of the estimated mean population each year. Table (ii) gives the number of Europeans certified to have died of this disease at various age groups during a similar period, and table (iii), the death rates per 100,000 in each Province between the years 1915 and 1924, distinguishing between males and females. Table (iv) shows the annual average male, female, and total death rates from tuberculosis in each year between 1916 and 1922. These rates have been computed on the average number of deaths per 100,000 of the average mean population of each sex during the quinquennial periods shown.

22. **Deaths from Other Special Causes.**—An analysis of certified deaths from other causes up to the year 1921 was given in the sixth and previous issues of this *Year Book*. The following were dealt with :—Cancer, organic heart disease, childbirth, infectious and notifiable diseases, infantile diarrhoea and enteritis, violence (including suicide), and influenza.

§ 4. Marriages.

1. **Marriages in the Cape of Good Hope.**—(i) *Persons who may not Marry.*—Persons who may not marry in the Cape of Good Hope are males under fourteen and females under twelve years of age; minors, i.e. persons under twenty-one years of age (not being widowers or widows), unless with the consent of parents or guardians or of a Judge; persons of unsound mind; impotent persons, and blood relations in the direct line and collaterals within the third degree; persons previously married while such marriages subsist. Widowers or widows with minor children may only marry on the production of a certificate from the Master of the Supreme Court that the inheritance of minors has been secured, or that the estate or the deceased spouse is valued at less than £100. A guardian may not marry his ward until his accounts as guardian have been closed and audited.

(ii) *Persons Authorized to Solemnize Marriages.*—Magistrates and Detached Assistant Magistrates are authorized to solemnize marriages, as are also persons (ministers of religion, officers of the Public Service, or private individuals) who may be specially designated as marriage officers by the Minister of the Interior. Persons who were authorized to solemnize marriages in the Cape of Good Hope Province prior to the passing of the Act No. 43 of 1916 still possess that power. A marriage officer's authority may be revoked for misconduct or for other sufficient cause. The solemnization of marriages without proper authority is punishable by fine not exceeding £200, or by imprisonment with or without hard labour for a period not exceeding twelve months.

(iii) *Preliminaries to Marriage.*—In the case of Magistrates or Detached Assistant Magistrates written notice must be posted in a conspicuous place in or near the Court-house for a period of twenty-one days and read out in Court thrice, with an interval of not less than three days between consecutive readings, during such period, in the district or sub-district in which each of the parties has resided for not less than fourteen days prior to such publication of notice. In the case of ministers of the Christian religion, banns must be published on three Sundays before the congregation to which each of the parties belongs. All other marriage officers must publish notices of marriage by affixing a copy of each notice for a period of not less than twenty-one days in a conspicuous place accessible to the public at the residence of the marriage officer or in or at the building or place of worship of the congregation to which each of the parties belongs; and, if there is no such building, then at the Court of the Magistrate or Detached Assistant Magistrate of the district or sub-district in which each of the parties resides. No period of residence is specified in the case of ministers and marriage officers, other than Magistrates and Detached Assistant Magistrates. When the parties reside in different places, whether within the Province or elsewhere, banns or notice must be published in both such places in accordance with the law of the country in which the places are situated with relation to all marriage officers; and certificates of such publication, signed by the person or persons publishing such banns or notice, must be produced to the officiating marriage officer. Whenever banns are published by any one other than the officiating marriage officer, a certificate or certificates of such publication must be produced. A special licence is obtainable at the office of any Magistrate or Detached Assistant Magistrate at a cost of £5. The marriage must be solemnized within three months after the date of issue of the licence or of the last publication of banns.

(iv) *The Marriage Ceremony.*—In the case of ministers of the Christian religion the ceremony must be that of the denomination concerned. All marriage officers, except ministers of the English and Dutch Reformed Churches, who are allowed to follow the form adopted by their Churches, must in some part of the ceremony require the parties to repeat the words: "I do solemnly declare that I know not of any lawful impediment why I, A B, may not be joined in matrimony to C D, here present," and "I call upon these persons here present to witness that I, A B, do take C D to be my lawful wedded wife (or husband)." Marriages may be solemnized by Magistrates and Detached Assistant Magistrates in the court-room or office between the hours of 9 a.m. and 12 noon, or in a private house at any convenient hour of the day; and by other marriage officers between the hours of 8 a.m. and 4 p.m. There are no specified hours within which marriages by special licence must be performed.

(v) *Registration.*—After the ceremony certain documents are required to be signed by the parties, by at least two witnesses, and by the officiating marriage officer, these being, in the case of Magistrates and Detached Assistant Magistrates, the original register form, which, after being copied into the marriage record book, is forwarded to the Central Office; and in the case of other marriage officers, the original register book and the duplicate original register form, which latter is dispatched to the Central Office for registration.

(vi) *Certificates, Searches, and Fees.*—Magistrates and Detached Assistant Magistrates may not charge a fee for solemnizing marriages, and no provision exists for searches to be made or certificates to be issued by them. Other marriage officers (except ministers of churches established in the Province prior to the 7th September, 1838, who are entitled to the fees customarily paid to them at that date) may charge a fee of 4s. for solemnizing a marriage. The fees payable for searches and issue of certificates are prescribed by regulation framed under Act No. 23 of 1923 (*vide* paragraph 5).

2. **Marriages in Natal.**—(i) *General.*—Ordinance No. 17 of 1846 provides for the solemnization of marriages after the publication of banns by ministers of the Christian religion. After three months from the date of the last publication of banns, marriage may not be performed unless the banns are republished. The Government may appoint marriage officers to perform marriage ceremonies. Before minors are married the consent of their legal guardians must be obtained, and if that is not procurable, then the consent of the chief Civil Judge must be obtained. After the marriage ceremony an entry of the marriage is required to be made in the register kept by the minister or marriage officer, such entry being signed by the parties in the presence of two witnesses and the minister or marriage officer.

Under Law No. 7 of 1889 Magistrates of every district are authorized to issue licences to marry in place of the publication of banns, and such licences lapse after three months from the date of issue. The parties must make a declaration before the licence is issued. In the event of a minor wishing to obtain a licence to marry, the consent of the legal guardian must first be procured; but if this is not possible, then the consent of the chief Civil Judge is necessary. In the event of false declaration being made, the offender renders himself liable to imprisonment for any period up to five years.

All the foregoing requirements apply to white persons, to natives exempt from the operation of native law, and to Christian Indians.

(ii) *Indian Immigrants.*—All marriages of Indian immigrants are required to be registered with the Protector of Indian Immigrants under Natal Law No. 25 of 1891; and in the case of Christian Indians an additional copy of the marriage register is forwarded to the Protector.

(iii) *Natives.*—Under Natal Law No. 28 of 1865, natives exempted from the operation of native law and having once married are never allowed to marry according to native law. Law No. 46 of 1887 provides that natives, one or both of the parties being subject to native law, may be married by Christian rites. They must apply to the Magistrate for a licence, which holds good for three months. Persons making a false statement in obtaining a licence render themselves liable to a penalty of £10 or to imprisonment for three months. Ministers may not solemnize these marriages without the necessary licence. The children of natives thus married cannot marry according to native law. Under Act No. 44 of 1903, a minister who solemnizes marriages of natives by Christian rites must be licensed by the Governor-General. There is a penalty for officiating at a marriage without being licensed to do so, and also for neglecting to keep a marriage register and to forward copies to the persons proper to receive them. The Registrar-General maintains a general index in which are shown all marriages set out in the copies furnished by ministers and marriage officers.

3. **Marriages in the Transvaal.**—(i) *General.*—Act No. 13 of 1909 of the Transvaal, amending Law No. 3 of 1871, provides that marriages between white persons may be either by banns or by licence, and may be solemnized by the Magistrates of the various districts and all ministers of religion who have been appointed marriage officers by the Minister of the Interior. Banns must be published in public in the ordinary manner on three successive Sundays during Divine Service in a church or other building habitually used for public worship or by their being posted up for a period covering three successive Sundays in a conspicuous place, to which the public have access, at the Magistrate's Office of the district in which either of the parties to the intended marriage resides, or in which both of them reside. If a marriage is not solemnized within three months after the last publication of banns, such publication is no longer valid, and publication must take place afresh. A special licence may be obtained by the parties appearing before a Magistrate, after satisfying such Magistrate that there are no impediments to the marriage. The fee for a licence, which is valid for three months from the date of issue, is £5. The fee payable to the Government in respect of any marriage solemnized by a Magistrate is 5s.

(ii) *Marriages of Coloured Persons.*—Law No. 3 of 1897 regulates the marriages of coloured persons. The term *coloured person* includes any person who is manifestly coloured, and whose marriage on that account cannot be solemnized under the law for white persons. Before a marriage of coloured persons can be solemnized the parties must appear before a civil marriage officer, and submit a certificate from their parents or guardian, from their captain or chief or the minister of their church, or, in the absence of any of these persons, from any reputable citizen, preferably a person occupying an official position, such as the native or sub-native commissioner, to the effect that there is no impediment to the marriage according to law. The civil marriage officer then grants an enabling certificate on which the marriage can be solemnized. Marriages of coloured persons contracted prior to the promulgation of Law No. 3 of 1897 are not legal, but may be legalized by registration under Ordinance No. 29 of 1903, provided that such marriages were solemnized by ministers of religion authorized to solemnize marriages under Law No. 3 of 1871.

(iii) *Marriages of Minors.*—Sections 8 and 16 of Law No. 3 of 1871, as amended by Act No. 13 of 1909, provide that: If any person acknowledges to be a minor, or if from any other information there are good grounds for considering him or her to be such, and he or she cannot produce the consent of father or guardian, or in case a widower or widow wishes to remarry and minor heirs are left for whose father's or mother's portion of the inheritance proper security (bewys) shall not have been given according to law, according to certificate from the Orphan Master (now the Master of the Supreme Court) or other official authorized by law thereto, or if it shall be known that the persons who seek to be joined together in matrimony are related to one another within one of the prohibited degrees of blood relationship or that they have come from beyond the borders of this State for the express purpose of being married here because they would not have been able to effect such in the place where they reside, or the publication of banns shall not have taken place, or a special licence shall not have been granted as provided by law, or if it shall be known, or if, by inquiry in the manner provided by Article 5, or in any other lawful manner it might have been learned it shall not be lawful to solemnize a marriage of such a person, and any magistrate or marriage officer, who, in such event, solemnizes such a marriage, shall be liable on conviction, to a fine not exceeding £50 or in default of payment to imprisonment with or without hard labour, for a period not exceeding six months.

If a minor cannot obtain the consent of parents or guardians to enter into a marriage owing to insurmountable difficulties, such as protracted absence of the same from the State or other unforeseen impediment, it shall be lawful for the magistrate of the district in which the minor resides, to grant or refuse consent after due inquiry into such cases.

4. **Marriages in the Orange Free State.**—The Law relating to the contracting of marriages in the Province of the Orange Free State is No. 26 of 1899, which came into operation on the 14th July of that year. This Law makes provision for marriages to be entered into either after publication of banns or by special marriage licence.

The administration of sections 8, 9, 11, 15, and 18 of the Law was delegated to the Administrator by the Governor-General-in-Council under the provisions of section 84 of the *South Africa Act*, with effect from the 24th August, 1911; and in terms of Proclamation No. 228 of the same date the duties which were performed under the Law by the Government Secretary now devolve upon the Provincial Secretary. The remaining provisions of the Law continue to be vested in the Governor-General.

In the case of a marriage by banns, it is required by section 3 that the banns shall be publicly published on three consecutive Sundays during the holding of public Divine Service in some church building or other recognized institution for public Divine worship within the parish wherein one or both of the parties reside; should the parties reside in different parishes, the banns must be published in each such parish. Section 7, however, allows of the publication of banns, under special circumstances, by means of a notice affixed to the outside door of the court-room of a Magistrate during a period of three weeks.

The procedure to be followed by applicants for a special marriage licence is set forth in sections 9, 10, and 11 of the Law, and in accordance therewith the parties are required to appear together before a Magistrate and there make and subscribe to affidavits containing answers to questions which it is necessary for him to put to them in order to satisfy himself that there are no legal impediments to the issue of the special marriage licence applied for. The application, supported by the affidavits and the Magistrate's certificate of his examination of the parties, is then submitted to the Administrator, who, if all legal requirements have been complied with, issues the licence, which authorizes any lawfully appointed marriage officer in the Province to solemnize the marriage.

Section 7 empowers Magistrates or Assistant Magistrates to act as marriage officers, and section 16 prescribes the marriage formula to be employed in the case of marriage ceremonies to be performed by those officers, but ministers, priests, or missionaries must be specially authorized by the Governor-General-in-Council, in terms of section 4 of the Law, to act as marriage officers before they can solemnize any marriage within the Province.

Section 13 prescribes the qualifications required in parties to marriages, and mentions the disqualifications on account of which marriages are prohibited. It is provided, *inter alia*, that minors must have attained the age of eighteen years in the case of males and fifteen years in the case of females, and that they must produce evidence of the consent of their parents or guardians in respect of their contemplated marriage. Where a parent's consent is unobtainable by reason of his absence from the Province or by reason of any other unforeseen circumstance, the Magistrate may, after due investigation, and on his being satisfied that there are no reasonable grounds for refusal, grant consent under the provisions of section 19. In the case of a widower three months, and in the case of a widow 180 days, must have elapsed since the death of the deceased spouse before a further marriage may be contracted by him or her. The Law relating to the prohibited degrees of consanguinity referred to in this section is Ordinance No. 31 of 1903.

In terms of section 15 the special leave of the Administrator is necessary for a marriage between persons, both of whom are resident in the Province, who proceed to another Province or country for the purpose of having their marriage solemnized there.

Marriages may be solemnized, as provided by section 17, on any day of the week, including Sunday, but the ceremony must take place between the hours of eight in the morning and four in the afternoon in some church or other public building devoted to Divine Service, public office, or private house with open doors, and in the presence of at least two legally qualified witnesses.

Section 18 prescribes the form of the register to be used in connection with the celebration of marriages and provides for the custody of the original registers and the duplicate original registers respectively, as well as for the kind of evidence of a marriage necessary and sufficient for the purposes of the Courts.

Section 28 provides for the recognition of heathen marriages, and lays down that the children of such marriages shall not be deprived of the right to take, by way of inheritance, the lawfully acquired property of such parents, and further establishes the right of the parents to hold and exercise the same rights over their children that they would have had if such children had been born in lawful wedlock.

The remaining provisions of the Law deal with breach of promise, foreign marriages, marriage fees payable to Magistrates in the case of civil marriages, church rites and rules, and prohibited marriages; also with the penalties which may be imposed for contraventions of the Law.

5. **Union Legislation.**—Act No. 20 of 1913 authorizes the solemnization of marriages after the publication of banns in different places, whether one or both such places be in another Province, or in a country, colony, or territory outside the Union.

Under section 56 of Act No. 24 of 1913, the remarriage of the surviving spouse before the portions of minor children are secured is prohibited, except with the consent of the Master of the Supreme Court.

Act No. 22 of 1914 provides that Indian marriages according to the tenets of an Indian religion may be legalized by registration, provided that a joint application is made to any Magistrate or marriage officer and that each of the parties is desirous that the marriage should be regarded as a valid and binding one in law. Such unions become by the fact of registration valid and binding marriages from the date when they were contracted, and all incidents follow therefrom which follow from any other union recognized in law as a valid and binding marriage.

Act No. 43 of 1916 makes provision for the appointment of marriage officers to solemnize marriages under the laws in force in the several Provinces of the Union.

Act No. 4 of 1919 which provided for the custody of marriage registers, was repealed by the *Births, Marriages, and Deaths Registration Act* of 1923. Under this Act, the duplicate original register must be transmitted to the custody of the Registrar of the Province in which the marriage was solemnized, and the original register retained in the custody of the Marriage officer who solemnized such marriage.

The following are the fees and charges payable in respect of searches and of the issue of certificates, prescribed by regulations framed under Act No. 23 of 1923 :—

	£	s.	d.
For a special licence	5	0	0
For a certificate of marriage	0	2	6
For a copy of any documentary proof	0	1	0
For each search made, per calendar year or part thereof	0	1	0

Act No. 17 of 1921 permits the marriage of a widow with her deceased husband's brother.

6. **Marriages Registered.**—The table for European marriages in this section apply only to events where both the groom and the bride were of European descent. If one only of the contracting parties was of such descent, then the marriages have been tabulated as *mixed* and are excluded from all the following tables relating to marriages of European persons.

MARRIAGES REGISTERED—UNION, 1911 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.

* Including mixed marriages in the Cape of Good Hope, for the details of which see the following table.

† For annual figures see previous issues of this *Year Book*.

7. **Mixed Marriages.**—The term *mixed marriage* is used to denote a marriage contracted by parties, one of whom is of European descent and the other of aboriginal or other coloured descent. There are a few such marriages contracted annually in the Cape Province, where the law permits such unions, and the following table gives the number solemnized during a period of years :—

MIXED MARRIAGES—CAPE OF GOOD HOPE, 1917 TO 1924.

DESCRIPTION.	1917.	1918.	1919.	1920.	1921.	1922.	1923.	1924.
European males to non-European females.....	91	134	93	76	84	58	72	75
Non-European males to European females.....	62	61	25	41	29	21	23	26
TOTAL.....	153	195	118	117	113	79	95	101

8. **Marriage Rate.**—The following table shows the number of marriages of Europeans contracted per 1,000 of the estimated mean European population of each Province and the Union during a series of years. The records of marriage rates date back to the year 1911 for the whole Union and for years prior to 1918 were published in previous issues of this *Year Book*. The highest rate recorded was in the year 1920, and the lowest in 1923. The rates given below have been recalculated, and are based on revised estimates of population according to the Censuses of 1918 and 1921. Figures for earlier years were given in previous issues of this *Year Book*.

MARRIAGE RATES OF EUROPEANS—UNION, 1918 TO 1925.

Year.	Cape of Good Hope.	Natal.	Transvaal.	Orange Free State.	Union.
1918.....	7·67	8·28	8·75	8·39	8·19

TOTAL MARRIAGES	100·00	100·00	100·00	100·00	100·00	100·00	100·00

The foregoing table shows that the tendency for persons to be married before a magistrate in preference to a marriage by a religious ceremony is increasing. It reached the percentage of 28·30 in 1915, falling to 26·95 per cent. in 1916, and rising in 1921 to 31·81 per cent., being the highest percentage recorded. The year 1922, however, shows a decline of nearly 3 per cent. This high percentage for the Union is mainly due to the large proportion of civil marriages in the Transvaal, where 45·8 per cent. of the total marriages in the year 1920 were solemnized by magistrates, while only 17·3 per cent. of the total marriages in the Orange Free State were civil marriages. The proportion of civil marriages to the total marriages registered during the year 1924 in the Union was 29·66 per cent.; in New Zealand (1923) 19·3 per cent.; and in the Commonwealth of Australia (1923) only 5·1 per cent.

10. **Marriages by Banns or Licence.**—The subjoined table gives particulars from 1918 of the number of persons in each Province and in the Union who were married respectively after the publication of banns or by licences. Figures for earlier years will be found in previous issues of this *Year Book*:—

NUMBER OF EUROPEANS MARRIED BY BANNS AND LICENCE— UNION, 1918 TO 1925.

12. **Ages and Marital Condition of Persons Married.**—Table (i) hereunder gives particulars as to the ages and marital condition of Europeans married in the Union in 1923 ; table (ii) gives the same particulars with respect to non-Europeans, and tables (iii) and (iv) similar information for the year 1924. Tables (v) and (vi) give particulars as to the relative ages of Europeans married in the Union during the years 1923 and 1924. Table (vii) gives the numbers and percentages at each age period of bridegrooms and brides who married during a period of years. It will be observed that the age at which men most commonly marry was between twenty-five and twenty-nine years throughout the whole period, while that for brides remained constant at from twenty to twenty-four years.

13. **Marriages of Minors.**—The number of marriages of minors in the Union during a series of years and the proportion per cent. of that number to the total number of marriages are given below.* On comparison with figures for the United Kingdom and various British Dominions, the percentage of bridegrooms under twenty-one years is lower in the Union, but, on the other hand, with the exception of Canada, the percentage of brides who marry under that age is higher. In England and Wales the percentage in 1923 was: Grooms 4·24, brides 14·29; in Scotland, 1923—Grooms 6·30, brides 17·97; in New Zealand, 1923—Grooms 3·23, brides 16·42; in Canada, 1923—Grooms 4·63, brides 31·04; and in the Commonwealth of Australia, 1924—Grooms 4·86, brides 21·18.

MARRIAGES OF MINORS—EUROPEANS, 1918 TO 1925.

CHAPTER XXVI.

NATIVE AFFAIRS.

§ 1. Native Population of the Union.

1. **Native Population.**—The number of natives in the Union at various census dates was as follows :—

NUMBER OF NATIVES IN UNION AREA AT VARIOUS CENSUSES (EXCLUSIVE OF MIXED AND OTHER COLOURED POPULATION).

Province.	1904.	1911.		1921.	
	Number of Natives.	Number of Natives.	Percentage of Total Population.	Number of Natives.	Percentage of Total Population.

Transvaal.....	937,127	1,219,845	72·34	1,495,869	71·65
Orange Free State..	225,101	325,824	61·69	421,978	67·11
UNION.....	3,491,056	4,019,006	67·28	4,697,813	67·80

2. **Distribution of Native Population.**—The following table indicates, from the returns of the Population Censuses of 1911 and 1921, the distribution of the Bantu population of the Union. The principal areas in which the natives were congregated in those years and the density per square mile in the case of each group shown are given according to Provinces. It will be seen that in the Cape Province the native population is centred in the Native Territories and a number of eastern districts, with King William's Town as the area with the densest native population. In Natal about one-quarter of the native population is to be found in Zululand, while in the rest of the Province the natives are distributed evenly throughout the various districts. In Zululand they are, however, less densely settled than in the remainder of Natal. In the Transvaal the bulk of the native population is contained in the Witwatersrand area, which is largely urban and has a high density, and in the northern portion of the Province, forming the greater part of the Bushveld. In the Orange Free State the natives are principally located in the central and eastern districts, adjoining the Basutoland border.

§ 2. Representation.

1. **Parliament.**—The *South Africa Act* (§ 36) preserves for the election of members of the House of Assembly the franchise laws of the different colonies, which united to form the Union, as they existed on the 31st May, 1910. In the Cape Province no distinction was made between European and native, and the names of a large number of natives who are qualified in respect of property or salary, as well as educationally, are included in the electoral rolls. In Natal, natives are only entitled to become parliamentary voters with the specific authority of the Governor-General (Law No. 11 of 1865). The number so authorized at the present time is negligible.* The Letters Patent of 1906 and 1907 in respect of the Transvaal and Orange River Colony, under which the franchise was regulated, granted manhood suffrage

* See Chapter II.

to all persons of European descent. There is therefore no provision for the direct representation of the natives of the Transvaal and Orange Free State Provinces in the House of Assembly. The *South Africa Act* makes special provision to protect the franchise rights of coloured persons in the Cape of Good Hope as they existed at the date of establishment of the Union (§ 35).

In the Senate provision is made under the constitution [*South Africa Act*, § 24 (ii)] for the inclusion of four members nominated by the Governor-General who " shall be selected on the ground mainly of their thorough acquaintance, by reason of their official experience or otherwise, with the reasonable wants and wishes of the coloured races in South Africa." The four Senators so nominated at present are Senators Sir Walter Stanford, H. G. Stuart, Dr. A. W. Roberts, and General D. J. E. Opperman.

2. **Native Affairs Commission.**—This Commission, established under the *Native Affairs Act* (No. 23 of 1920), is an advisory body consisting of not less than three or more than five members, appointed by the Governor-General and presided over by the Minister of Native Affairs. The members, though in receipt of salaries as Commissioners, may sit in either House of Parliament. The functions and duties of the Commission " include the consideration of any matter relating to the general conduct of the administration of Native Affairs, or to legislation in so far as it may affect the native population (other than matters of departmental administration) and the submission to the Minister of its recommendations on any such matters." Its functions are thus merely advisory, but adequate means are reserved to it of placing its views before Cabinet and Parliament, should its recommendations not be accepted. Regulations in respect of the Commission were published under Government Notice 2004 of 1920.

The Commission, as at present constituted, was appointed in 1920 with the following membership: Senator the Honourable A. W. Roberts, D.Sc., F.R.S.E., F.R.A.S., Brigadier-General L. A. S. Lemmer, M.L.A., and G. T. Loram, M.A., LL.B., Ph.D. In the early stages of its activities, which commenced in April, 1921, the Commission accepted as the first principles of its policy (*a*) that it was primarily and essentially the friend of the native people, and, as such, the needs, aspirations and progress of the natives should be considered sympathetically by it; (*b*) that it was the adviser of the Government in matters affecting the interests of the natives; (*c*) that it should endeavour to win the confidence of the natives; and (*d*) that it should strive to educate public opinion so as to bring about the most harmonious relations possible between white and black in South Africa. The Commissioners have travelled widely throughout the Union for the purposes of the closer study of native problems and of coming into contact personally with native points of view. They have dealt with a number of specific matters of native administration and have investigated certain general questions of native policy, such as native taxation and education, the pass laws, the control of natives in urban areas, land administration, and the extension of the system of local native councils as contemplated by the *Native Affairs Act*, 1920. They have in addition conducted enquiries into special matters of native interest referred to them by the Government for investigation and report. Fuller information may be found in the first annual statutory report of the Commission for the year 1921 (U.G. 15 of 1922) and in the later annual reports of the Commission.

3. **Native Conferences.**—The *Native Affairs Act*, 1920, also revived for the Union the obsolescent provision of the Transvaal Law for the summoning of conferences of native persons and bodies representative of native opinion, with the object of enabling the Government to gauge more accurately the state of native thought and feeling and of affording to those not otherwise represented, the opportunity of expressing their views. The first of such conferences, which was attended also by the Native Affairs Commission, was held at Bloemfontein in September, 1922, for the purpose of discussing the provisions of the proposed *Native (Urban Areas) Bill* (see § 9 below). In September, 1923, a further conference was held at Pretoria at which the provisions of the *Native Registration and Protection Bill*, a *Native Marriage Bill*, and other matters were considered. A similar conference was held at Pretoria in September, 1924, when the introduction of a uniform system of native taxation was discussed. It is intended that at least one such conference should be summoned annually to deal with such matters of native interest as may at the time be outstanding.

§ 3. Administration.

1. **General.**—In terms of section 147 of the *South Africa Act*, the control and administration of native affairs throughout the Union are vested in the Governor-General-in-Council who is authorized to exercise all special powers in regard to native administration vested at the time in the Governors of the Colonies entering the Union, or exercised by other authorities as superior chiefs. The executive authority rests with a Minister of Native Affairs, who is in control of a Department of State under a permanent Secretary for Native Affairs with an Under Secretary and Staff. The department is responsible for the administration of all legislation specially affecting the interests of natives and the supervision and control of their

general welfare, and is referred to generally by all other departments of State in regard to matters falling within their purview in which questions involving native policy, administration, or interest are involved.

Various phases of the administration of the Department are dealt with in the following sections of this chapter. A report on the general position of native affairs, and on the work of the Department for the years 1919 to 1921, was published in 1922, and it is intended in future to issue such reports triennially.

2. **District Administration.**—The system of district administration differs in the various Provinces. In the *Cape of Good Hope* the Transkeian Territories, a purely native area comprising that portion of the Province lying to the east of the Kei River, are administered by a Chief Magistrate and twenty-seven magistrates who are officers of the Native Affairs Department. The Chief Magistrate's headquarters are at Umtata, and he is also President of the Native Appeal Court, which sits periodically at fixed centres throughout the Territories. To the west of the Kei the most prominently native districts of the Cape Province are under the control, for purposes of native administration, of a Chief Native Commissioner stationed at King William's Town. In the two almost purely native districts of Herschel and Glen Grey, the magistrates are officers of the Native Affairs Department. In the remaining districts the magistrates of the Department of Justice are charged with the administration of native affairs subject, within his area and in respect of native affairs, to the supervision of the Chief Native Commissioner. In the more populous native areas the magistrates are assisted by superintendents of natives, who are officials of the Native Affairs Department.

In *Natal* a Chief Native Commissioner, with headquarters at Pietermaritzburg, deals administratively with native affairs throughout the Province, including Zululand. He is assisted by a staff of inspectors of locations and mission reserves, who are officers of the Native Affairs Department. In a number of districts, however, the Department is entirely dependent on assistance rendered by the magistrates attached to the Department of Justice.

In the *Transvaal* all magistrates are controlled by the Department of Justice, but are *ex officio* Native Commissioners, and in this capacity are for practical purposes officers of the Department of Native Affairs. In the more densely populated native areas native affairs are administered, under the Native Commissioners, by Native Sub-Commissioners and detached clerks who are officers of the Native Affairs Department. In other districts native affairs work has been specially allocated to particular members of the magistrates' staffs.

In the *Orange Free State* the magistrates of the Department of Justice act as representatives of the Department assisted, in the Harrismith and Thaba 'Nchu districts (which contain native reserves), by supervisors who are officers of the Native Affairs Department.

It is an understanding between the Departments of Justice and Native Affairs that, in respect of magistrates under the control of the former in certain districts in which there is a large native population, the selection of the officer to occupy the post should be the subject of consultation between the two Departments.

In all four Provinces of the Union there are native chiefs and headmen, many of whom are subsidized by the Government. In a limited number of cases fairly substantial allowances are paid under agreements entered into at the time of annexation, or in recognition of services rendered. In the large majority of cases, however, the allowances are inconsiderable in amount and are made as a token of recognition rather than as remuneration for services. Their powers, duties, and jurisdiction vary in different parts of the country. All serve under district officials and are in charge of tribes and locations, as the case may be.

3. **Native Labour Department.**—The Director of Native Labour, an officer of the Department, is charged with executive functions, under the Secretary, in those labour districts proclaimed under the *Native Labour Regulation Act*, 1911, which lie outside the areas controlled by the Chief Magistrate, Transkei, and the Chief Native Commissioners, Natal and Cape (see § 11 below). The most important of these districts are situated in the Witwatersrand gold mining area, and the Director's headquarters are at Johannesburg. He is also Chief Native Commissioner for the Witwatersrand area, and under him are three Native Sub-Commissioners stationed at different points in the mining area and in control of a staff of inspectors and pass officials who visit the compounds, deal judicially with petty offences, and generally watch over the welfare and interests of natives employed on the gold mines. The Director administers the other labour districts through the local magistrates. He also advises the Government generally in respect of native labour matters throughout the Union.

§ 4. Local Government.

1. **Glen Grey District Council.**—(i) *Constitution.*—This Council was established under the provisions of the *Glen Grey Act* (Cape of Good Hope), No. 25 of 1894. It is composed of the magistrate of Lady Frere as chairman and twelve native members, six nominated by the Governor-General and six elected by the Location Boards also established under the Act.

(ii) *Functions and Financial Statistics.*—The revenues of the Council are derived from the rates levied in terms of the Act, and are spent, subject to the approval of the Governor-General, in the interests of natives of the district on dipping of cattle, roads, the encouragement of agriculture, irrigation and public health. It has constructed and maintains a number of dipping tanks; it possesses an experimental farm, which is of service in raising the standard of agriculture in the district, and it is responsible for the upkeep of all roads in the district excepting the main road. The general position of the Council has been very much relieved by the action of the Provincial Council in assuming responsibility for the payment of all teachers' salaries, and the expenditure on education, previously one of the largest items in the Council's accounts, has been diverted to other purposes.

2. **Transkeian Territories General Council.**—(i) *Constitution.*—The establishment of native councils in the Transkeian Territories, under a formal constitution, dates from the beginning of 1895, when *District Councils* were created in the districts of Butterworth, Idutywa, Nqamakwe, and Tsomo, the four being united in what was called the *Transkeian General Council*, whose meetings were held at Butterworth. In 1899 the district of Kentani entered the system. In 1903 it was extended to seven districts of Tembuland and East Griqualand, when the name of the larger body was changed to *Transkeian Territories General Council*, meeting yearly in Umtata. Since then seven other districts have been added. Those now embraced by the operations of the *Transkeian Territories General Council* are therefore nineteen, namely, Butterworth, Elliotdale, Engcobo, Idutywa, Kentani, Matatiele, Mount Ayliff, Mount Fletcher, Mount Frere, Mqanduli, Nqamakwe, Qumbu, St. Marks, Tsolo, Tsomo, Umtata, Umzimkulu, Willowvale, and Xalanga, comprising the whole of the Transkei, the whole of Tembuland and the whole of East Griqualand (except Mount Currie). The general policy of the Government has been opposed to forcing the system upon the people at large in advance of their fitness for it or their desire to have it. The practice is to await the seasonable opportunity in each district considered by itself, and then to call upon the people to express their wishes in the matter.

A *District Council* consists of a Resident Magistrate and six members, and is constituted in the following way. At the formation, and thereafter triennially, nominations for membership are called for. Two of these are made by the Governor-General, and four by the local representatives of the ratepayers. In districts where survey and native individual tenure have been introduced, or where the *District Council* asks for election on a popular basis, the local nominations are made by an *ad hoc* body of title-holders or hut-tax payers, consisting of three persons of each ward elected by the ratepayers. In other districts the nominations are made by the headmen.

Each *District Council* meets quarterly, or oftener if summoned by the magistrate, and at each November meeting nominates two of its number as members of the *General Council* during the following year. The Governor-General nominates another member usually, but not necessarily, a *District Councillor;* and these members from the various districts, together with the magistrates, form the *Transkeian Territories General Council*, which consists at present of the Chief Magistrate of the Territories as presiding officer, nineteen magistrates, and fifty-seven native members. The annual session of this body is called during the autumn months of the year by summons from the Chief Magistrate, and usually lasts for a fortnight. The Chief Magistrate is empowered to convene general extraordinary sessions.

(ii) *Functions.*—These Councils (District and General) are constituted as advisories to the administration, associating the people with the control of local funds, giving them a voice in the disposal of affairs intimately affecting their own interest, training them to constitutional methods of expressing their wishes in regard to general and local policy, and also keeping the Government and its officers in touch with native feeling. Debates cover a wide range of subjects, including the revision of laws particularly affecting the native population, such as native marriage and inheritance, education, diseases amongst stock, control of commonages, forests, etc. Questions come before the *General Council* directly by motions introduced by magistrates or members, and also on submission from *District Councils* and references from Government, frequent use being made of the committee system. The resolutions of the Councils (District or General) having been taken on the subjects placed before them, the responsibility for action thereon rests upon the magistrates, the Treasurer, the Chief Magistrate, the Minister, or the Governor-General, according to the importance of the matters involved.

(iii) *Functions of District Councils.*—In local administration the various *District Councils* stand to the *General Council* in the relation of individual parts of a single body. They are the executive organs of the *General Council*, which distributes amongst them such duties as road maintenance, dipping operations, and supervision of commonages; but remains financially responsible for their actions. Strictly speaking, they have no separate income or expenditure, but there is one common treasury into which all revenues

flow, and which is chargeable with the cost of the different services authorized. This arrangement has the twofold merit of allowing for local variations and ensuring, under better control, the accumulation of funds which enable the undertaking of projects beyond the means of any single district organization.

(iv) *Financial System.*—The main source of revenue is a rate levied annually by the Governor-General, which may be varied in amount according to the advice of the *General Council.* It has, however always been fixed at ten shillings, payable roughly by every native male adult in the area under jurisdiction, which embraces the whole of the magisterial (Council) districts, except portions under municipal or village management and, in the case of Matatiele, private farms.

In general, the *District Councils* are responsible for the initiation of *expenditure* proposals, which are collated and laid before the *General Council* in the form of annual estimates of expenditure. After revision by the Treasurer the votes of the Council are taken thereon, and they are then submitted for the approval of the Governor-General. Council operations embrace the maintenance of about 3,200 miles of roads and the construction of new ones at a charge of about £25,000 a year, the construction and repair of dipping tanks, the provision and upkeep of wattle plantations; the dipping of large stock, grants in aid of scholastic education, hospitals; and lastly its own institutions for the teaching of agriculture, and for the improvement of stock breeding amongst natives and experimenting in and encouraging the cotton-growing industry. As a general rule, the Council is not in receipt of Government or Provincial grants, nor does it, within its area, levy rates upon Europeans, who nevertheless share incidentally in most of the benefits accruing to ratepayers from Council expenditure.

(v) *Education.*—Prior to the 1st July, 1920, the Council paid *pro rata* with the Education Department (from ten to twenty shillings in the £1) towards teachers' salaries, school furniture, and sewing material, limiting its assistance to tuition up to Standard IV. It had no part in the appointment of teachers, management of schools, or other matters of educational organization or policy. From the 1st July, 1920, the Cape Provincial Council took over the payment of the whole of the teachers' salaries—including the *pro rata* grants previously paid from Council funds. The General Council resolved to pay a temporary allowance of 20 per cent. of their Provincial grants to all teachers at schools previously aided by it, to take effect from 1st July, 1920, and to cease as soon as the Provincial scale of grants to native teachers was increased. This temporary allowance is still being paid. With regard to agricultural education, the Council possesses two schools of agriculture and three agricultural farms which receive no monetary aid from either the Union or Provincial Government, but which occasionally obtain advice from departmental specialists. The School of Agriculture at Tsolo started in 1913 with four students. At present there are fifty students, which is the maximum number which can be accommodated. To meet the growing demand another school of agriculture was opened at Teko, in the Butterworth district, early in 1922, which provides accommodation for fifty students. The Council pays and controls the work of native agricultural demonstrators, numbering thirty-eight, distributed over the whole of the districts under the Transkeian Territories General Council. The duty of these demonstrators is to promote better methods of agriculture among the natives.

(vi) *Roads and Bridges.*—There are two rural road authorities, the *Provincial Council* and the *General Council,* whose respective spheres of operations have never been defined by law or formal agreement. Pending such a settlement the *Provincial Council* maintains the great trunk roads and a few others, municipal and village bodies keep roads within their areas, and the remainder are left to the *General Council.* The latter confines itself chiefly to roads in native locations, but occasionally repairs a thoroughfare through a European or native farming settlement, or a magisterial reserve with no local management. The *General Council* is the only body which constructs roads in Council districts. It receives no grants towards construction or maintenance of roads or bridges.

(vii) *Public Health.*—The Council has no prescribed functions in regard to the control of public health, and the question of its *pro rata* contribution on Government expenditure has remained in abeyance. But it pays the local *pro rata* share of the cost of treating its ratepayer population in hospitals of the Territories.

(viii) *Large Stock Dipping Operations.*—From the 1st July, 1915, cattle dipping operations in the *Transkeian Territories General Council* districts have been paid for from funds supplied by the natives, by means of stock rates. The magistrate and *District Council* of each district, with the exception of Idutywa, are responsible for carrying out the dipping operations. Subject to control by the Chief Magistrate and co-operation with the Veterinary Department, they take the necessary steps for suppressing East Coast Fever. The Engineer's department of the *General Council* arranges for and supervises the construction and repair of cattle tanks in native areas.

(ix) *Statistics.*—The following is a statement showing the revenue and expenditure for a series of years.

TRANSKEIAN TERRITORIES GENERAL COUNCIL—REVENUE AND EXPENDITURE, 1917–18 TO 1924–25.

Heading.	1917–18.	1918–19.	1919–20.	1920–21.	1921–22.	1922–23.	1923–24.	1924–25.

3. **Pondoland General Council.**—(i) *Constitution.*—In 1911 the Council system was extended to the districts of Libode, Ngqeleni, and Port St. Johns, collectively known as Western Pondoland. There are three *District Councils*, and a *General Council* known as the *Western Pondoland General Council* constituted on lines analogous to those of the *Transkeian Territories General Council.* The principal difference in constitution between the two is that the members, who are elected in the case of the *Transkeian Territories General Council*, are, in Western Pondoland, nominated by the Paramount Chief.

(ii) *Functions.*—The activities of the *Western Pondoland General Council* are on a more restricted scale than those of the *Transkeian Territories General Council*, and they are sufficiently indicated in the subjoined statement showing the revenue and expenditure for a series of years.

4. **Eastern Pondoland Trust Fund.**—In Eastern Pondoland, comprising the districts of Bizana, Flagstaff, Lusikisiki, and Tabankulu, the cost of construction and maintenance of cattle and sheep tanks, dipping of large stock, the cost of combating stock diseases generally, and grants towards scholastic education are met from revenue raised by special taxation each year. The amount of the tax is 7s. 6d. a year for each hut-tax payer, 2s. of which is education tax and 5s. 6d. tank and dipping tax. The Education Fund commenced from 1st July, 1917. Prior to the 1st July, 1918, the revenue and expenditure in connection with tank and dipping taxes were included in the accounts of the Native Affairs Department, but from the date mentioned the control of this Trust Fund was transferred to the Chief Magistrate. The table hereunder gives the revenue and expenditure of the Trust Fund from the 1st July, 1920 :—

EASTERN PONDOLAND TRUST FUND—REVENUE AND EXPENDITURE, 1920–21 TO 1924–25.

Expenditure.....	13,700	12,869	14,060	12,313	12,862

5. **Orange Free State Native Reserves.**—There are in the Orange Free State three areas reserved for the exclusive occupation of natives. These areas are the Native Reserves of Witzieshoek, Thaba 'Nchu, and Seliba.

The Witzieshoek Reserve, in extent about 50,000 morgen, was assigned in 1867 for the occupation of Paulus Mopeli, a Mosuto Chief, who desired to become a subject of the Orange Free State. The present population of the Reserve is estimated at 5,500. The chief of the tribe, who is appointed by the Government, exercises a limited jurisdiction in civil cases but none in criminal cases, is exempt from tax, and is bound to give all the required assistance for the preservation of order and peace within the territory. The representative of the Government, who is responsible for the administration of the Reserve, is known as the *Commandant*, and is an officer of the Native Affairs Department. In civil cases there is an appeal from the decision of the Chief to the *Commandant*, and in criminal cases the *Commandant* has all the powers granted to courts of resident magistrates. The *Commandant* must reside within the Reserve, and is charged with the collection of the hut tax of £1 per annum levied on the owner of each hut. He keeps a register of all male persons in the Reserve, as well as of the number of huts and exercises a general oversight over the affairs of the Reserve.

In addition to these officials, there is a Board constituted under Ordinance No. 6 of 1907, consisting of seven members. Five of these are natives of the Reserve, and two—the chairman and vice-chairman—are Europeans. All the members are nominated by the Government. The powers and duties of the Board include the maintenance and repair of roads (other than main roads), the provision of water supply and sanitary services, the establishment and support of schools in consultation with the education authorities, and the levy on each coloured male person of an annual tax not exceeding £1 for these purposes. The Board is further empowered, subject to approval by the Government, to make such regulations as may be necessary for carrying out these functions, and for other purposes connected with the management of the Reserve. The revenue collected from 31st May, 1910, to 31st December, 1918, amounted to £5,931, representing principally the location tax of 10s. per annum, school fees payable by pupils residing outside the Reserve, fines imposed, Government grants in aid of native education, dipping fees, and fees for grazing rights. The expenditure during the same period was £5,638, of which the chief items were: Education £2,633, and Improvements (fences, roads, dipping tanks, etc.), £1,923.

Owing to financial difficulties the Board resolved to suspend the activities of the schools from July, 1921, but a certain number were re-opened in January, 1922.

6. **Mission Stations and Communal Reserves.**—Under Act No. 29 of 1909 (Cape), certain mission stations, in which land was held in trust by the missionary body for the native and coloured occupants, were brought under a system in which a definite grant of land was made to the missionary body for the purposes of its work and the remainder of the station was demarcated and reserved for the registered occupiers. For the control and regulation of the native or coloured community thus established a Board of Management is provided by the Act. The Board consists of six members elected by the registered occupiers and three appointed by the Governor-General and is presided over by the magistrate of the district. The Board is endowed with certain of the duties and functions of a Village Management Board, mainly the control of roads, fences, sanitation, water supply, and use of the commonage and it has power to make regulations in regard to those matters, subject to the approval of the Governor-General. The Board may levy a rate of not less than 10s. per year on each registered occupier for the purpose of defraying the cost of administration.

Seven mission stations have now been proclaimed under the Act: Shiloh, in the district of Queenstown; Mamre, in the district of Malmesbury; Goshen, in the district of Cathcart; Enon, in the district of Uitenhage; Zoar, in the district of Ladismith; Pniel, in the district of Paarl; and Genadendal in the district of Caledon. The system has also, as provided in Part II of the Act, been extended to the four communal reserves: Leliefontein, Concordia, Steinkopf, and Komaggas in Namaqualand.

7. **Local Councils under Act No. 23 of 1920.**—The *Native Affairs Act*, 1920, provides for the establishment of local councils in native areas which have been set aside or may hereafter be set aside as such by Parliament. The councils are in principle designed to have real local self-government, and, while independent of official or European control in their deliberations, they will have as chairmen Government officials with advisory duties, conversant with the necessities and obligations of local government. The Native Affairs Commission, which was empowered to recommend the constitution of such councils, proceeded from the standpoint that these bodies should be established wherever possible. A series of consultative meetings has been held with the natives at various centres, and the Commission has made certain recommendations which are receiving the consideration of the Government.

8. **Tribal Trust Funds (Transvaal).**—In the Transvaal what are known as *Tribal Trust Funds* have been established in various districts, under the control of the local officers of the Native Affairs Department. Originally these funds were instituted for the

purpose of extinguishing tribal debts and reorganizing the finances of the tribes concerned. Owing to the dilatoriness in meeting their obligations in respect of land purchases, etc., imprudence and mismanagement of tribal moneys, certain tribes had become yearly more and more involved until with the consent of chiefs and people their affairs were investigated and taken in hand by the officers of the Native Affairs Department. As a result of the assistance and protection afforded, the tribal finances were in the course of a few years placed upon a solvent and satisfactory basis.

These Trust Funds comprise the proceeds of self-imposed levies voluntarily subscribed by the natives. The levy usually takes the form of an annual rate payable by each taxpayer, the amount of which is fixed by the Chief and members of the tribe. It is collected at the office of the Native Commissioner or Sub-Commissioner, and paid into a special banking account under the control of a Board consisting of the Commissioner and the Chief and councillors of the tribe. Books of account in respect of receipts and expenditure are kept, are audited annually by a public accountant, and are available for inspection at all times by natives interested.

The system of maintaining *Tribal Trust Funds* derived from voluntary levies was initiated in the Pietersburg district, and has been attended with marked success. As a result, a number of such Funds has been established, and in some cases they are utilized as media not only for discharging tribal obligations, but for providing services of benefit and utility to the communities concerned, e.g. fencing, tree planting, the construction and maintenance of dipping tanks, the sinking of boreholes, erection of windmills, etc.

Section 15 of the *Natives Taxation and Development Act*, No. 41 of 1925, now provides definite legal sanction for the imposition of these levies, if desired by any native tribe or community, not only in the Transvaal but throughout the Union.

§ 5. Land Administration.

1. **The Natives Land Act.**—The *Natives Land Act*, No. 27 of 1913, took effect from the 19th June, 1913, and was avowedly a temporary measure with the object of maintaining the *status quo* as regards the ownership and occupation of land in the Union relatively by natives and by persons other than natives—so far as that could be done without imposing undue hardship "until Parliament should make other provision." Provision was made for the appointment in the interim of a Commission for the purpose of inquiring into and recommending to Parliament what areas in the Union should be set apart within which (*a*) natives and (*b*) persons other than natives should not be permitted to acquire or hire land or interests in land.

To fulfil its purpose, the Act laid down that, except with the approval of the Governor-General, a native might not acquire from a person other than a native, nor a person other than a native from a native, any land or interest in land in any area outside of the native areas described in the schedule to the Act; and that without such approval no person other than a native might acquire any land or interest therein in a scheduled native area.

The Commission appointed under the Act (chairman, Sir William Beaumont) reported in 1916. After an exhaustive investigation of the questions referred to it, the Commission made recommendations as to the areas which should be set aside for native occupation. Extracts from the report of the Commission, giving certain interesting data collected by the latter, will be found in the fourth and previous issues of this *Year Book*.

In 1917 the further legislation contemplated in the Act was introduced into Parliament in the shape of the *Native Affairs Administration Bill*. The Native areas recommended by the Beaumont Commission were embodied in a schedule to the Bill, which, after the second reading, was referred to the Select Committee on Native Affairs. A large body of evidence was taken by that Committee, which, however, in the time at its disposal, was only able to consider and submit recommendations for the amendment of Chapter II; and to suggest, in regard to the matter of areas, that the Government should during the recess consider the advisability of appointing local committees to inquire further as to the adequacy and suitability of the areas recommended by the Beaumont Commission. This suggestion was adopted by the Government; and local committees, consisting each of three members (increased to four in the case of the Cape), selected for their knowledge of the areas in question, were appointed for the Cape Province, Natal, Orange Free State, Eastern Transvaal, and Western Transvaal.

The reports of the local committees were furnished in 1918, and from their several recommendations it was clear to the Government that the committees, in arriving at their conclusions, had followed different principles and that consequently the enactment of segregation clauses would be premature until the bases of the several recommendations had been co-ordinated, provision had been ensured for consideration in the native interest of the detailed proposals and the native population had been given further opportunity for enlightenment and discussion. In this connection, it might be stated that the suspicion and unrest engendered in the native mind towards the *Native Affairs Administration Bill* seemed to have increased rather than decreased with the effluxion of time.

These considerations led the Government to the conclusion that the time was not yet ripe for passing definite clear-cut segregation legislation, but as a preliminary step in that direction the policy embodied in the *Native Affairs Act* of 1920 (see § 2, paragraph 2) was decided upon.

In view of its far-reaching importance, reference may be made to the decision of the Chief Justice and a full bench in the Appellate Division of the Supreme Court, in the combined appeal of *Thompson and Stilwell* versus *Kama*, when it was held that the restrictions imposed upon the acquisition of land or interests in land by sections *one* and *five* of the 1913 Act did not, upon the construction given by the Court to section *eight* (2), apply in the Cape Province.

Pending the enactment of further legislation on the native land question, the Government has not hesitated to supply by administrative action indispensable requirements which it was originally intended should be met by the legislation foreshadowed in the *Natives Land Act*. The present position is that the Government readily recommends for the approval of the Governor-General transactions whereby natives are to acquire by purchase or lease, land or an interest in land in areas recommended for native occupation by one or other of the Local Committees, and thus in so far as these areas are concerned relief is afforded from the restrictions imposed by section 1 of the *Natives Land Act*.

Privately owned land will not in future be expropriated within *Committee* areas with a view to making such land available for native occupation nor will free grants be made for tribal locations. Speaking broadly, and excepting perhaps certain readjustments and one or two special cases, it is considered that the time has come when it must be recognized that any additional land which a man or a community now needs must be paid for either by way of purchase or of lease. As regards crown land in the *Committee* areas, the Government does not authorize permanent alienation without parliamentary authority. It recognizes, however, that natives should be given liberal rights of user of such land and has decided, therefore, that no further European rights shall be established. If an exception in this connection is made for very cogent reasons, other land equally suitable for native needs will be made available. These remarks apply primarily to the Transvaal and Natal. In the Cape Province, in view of the judgment referred to above, the facilities for acquiring land and interest in land are, so far as natives are concerned, exactly the same as they were prior to the passing of the *Natives Land Act*. In the Orange Free State, the fact that natives are debarred by law from acquiring any interest in land presents another difficulty which is engaging attention, especially with a view to enabling natives of the Barolong tribe to purchase or lease land on that portion of the Thaba 'Nchu district which was recommended by the Local Committee as a *Native Area*.

2. **Individual Tenure.**—(i) *Cape of Good Hope.*—The *individual* system of land tenure as elaborated in the *Glen Grey Act*, No. 25 of 1894, and applied in the Transkeian districts of Butterworth, Nqamakwe, Tsomo, and Idutywa, as provided in Proclamation No. 227 of 1895 (Cape), was extended to the districts of Tembuland by Proclamation No. 320 of 1911, while a somewhat modified but essentially similar system was applied to the District of Xalanga by Proclamation No. 241 of 1911. The survey of Xalanga with a view to the grant of individual titles was completed in 1914. In this district 2,292 garden and 2,016 building lots were surveyed and arrangements made for the issue of titles. In the Umtata district 13,296 garden lots and about 8,100 building lots were surveyed, and title-deeds are in course of preparation. The survey of the Engcobo district is now proceeding.

In the course of the survey of the Butterworth district in or about the year 1900, the plan was in many cases followed of surveying the arable lands of the several houses of a kraal as a single lot, with the result that when the holder died the heir became entitled to the land of all the houses. So many cases of this nature were found to exist, in which the heirs of minor houses suffered hardship through being deprived of a titled claim to the land of their house, that it was found desirable to amend the law so as to permit of such consolidated lands being subdivided with a view to the several houses coming into the hands of their rightful owners again. This was the idea underlying Proclamation No. 300 of 1913, which, however, was framed so as to be of wider scope than to apply to such cases only. Any large lot may now be subdivided, with the approval of the Governor-General, provided (so as to prevent excessive subdivision and its consequent evils) that no arable sublot is less than three morgen, and no building sublot less than half a morgen in extent. Advantage has been taken of the Proclamation only to a limited extent (about twelve cases).

A feature of the later surveys has been the engrafting into the Glen Grey system of land tenure of a plan for the setting aside of residential areas. Specific provision was made for this in connection with the Xalanga survey, and in other surveyed districts the policy is being given effect to by administrative means. Existing homesteads as a rule are not interfered with, but no new residential sites are being authorized unless they fall within one or another of the residential areas. All new church or school sites are also required to be within these areas. The policy has both an economic and a social aspect—economic in that it was brought about by the increasing congestion of the locations and the necessity for conserving the common lands as much as possible; social, in that it marks a departure

from the older native custom of selecting kraal sites at considerable distances from one another and distributed in a more or less haphazard manner about the commonage. The natives themselves, as is to be expected of a people essentially conservative in character, are slow to appreciate the change, though the Tembus voluntarily broached the matter to the Government when the survey was under discussion.

Two new principles in regard to individual tenure in the Transkeian Territories were introduced by Proclamation No. 196 of 1920. Forfeiture of allotments takes the place of cancellation of title deeds, and the functions of the Registrar of Deeds in regard to the custody, transfer, and registration of titles, have been vested in the Chief Magistrate.

(ii) *Natal.*—During 1918 the first definite step was taken towards introducing individual tenure of land into the native areas in Natal. A beginning was made in the Mission Reserves, and the preliminary survey of the Ifafa Reserve is complete, while others are proceeding. The conditions under which residents will be attached to the surveyed holdings are not yet decided.

(iii) *General.*—Considerable misgivings have recently been felt as to the success of the various systems of individual tenure. The survey of the locations has been an expensive process, the natives are not able to appreciate the value of exact measurement, and the surveys have not in all instances been carried out in a way to meet the conservative habits of those for whom the allotments were intended. The Survey Commission, which reported in 1921, recommended that some simpler form of survey should be employed where native allotments were in question, and Mr. M. C. Vos was appointed to go into the question and submit a scheme with this object. His report (U.G. 42 of 1922) is a valuable synopsis of the history of individual tenure, and contains suggestions for a simpler system of defining the boundaries of native allotments and for the registration of native titles. These suggestions are under the consideration of the Government.

3. **Occupation of Land for Church, School, and Trading Purposes.**—The Department of Native Affairs controls the grant or occupation of sites in native areas for Church, school, or trading purposes through the fact that approval by the Governor-General or Parliament is required under the various enactments dealing with the alienation or occupation of land for these purposes. Care is taken both to ensure that adequate facilities exist for the needs of the natives and to prevent monopolies. The First Report of the Select Committee on Native Affairs for the year 1925 recommends, with regard to application by churches or religious bodies for sites or other privileges depending upon Government recognition, that as a general rule permission shall only be granted to churches long established and enjoying universal public recognition, and in all other cases, before any application is considered by the Native Affairs Department, a report shall be submitted by the Native Affairs Commission in regard to the applicant body, as to the demand for its existence, its stability, its capacity both financially and educationally, and its general fitness for religious work amongst natives.

4. **Prospecting in Native Areas.**—Applications for permits to prospect in native locations are not generally encouraged. Several locations in the Cape Province have been proclaimed as areas within which prospecting is not allowed. In the Transvaal—where permission to prospect in the Crown Locations can only be obtained with the approval of the Minister of Native Affairs—applications have until recently been almost consistently refused. In view, however, of the recent important platinum discoveries in the Province, the Government has felt that it would not be justified in maintaining an attitude which might have the effect of preventing the exploitation of assets of national importance; and so a limited number of prospecting permits have been issued. The policy of the Government in this connexion is, on the one hand, to prevent the influx of large numbers of irresponsible Europeans into native locations, and to avoid the creation of monopolies on the other. It has accordingly been laid down that two permits may be issued in respect of any given area of location land, conferring a three months' prospecting right, against payment in advance of a fee of £10 sterling, the question of the renewal of such permits being dependent upon whether, during the period of that availability, *bona fide* prospecting has been carried out to the satisfaction of the Department.

§ 6. Natal Native Trusts.

1. **The Natal Native Trust.**—*The Natal Native Trust* was constituted under Letters Patent dated 27th April, 1864. In this body are vested approximately 2,262,066 acres of location land, and 144,192 acres of mission reserve lands, which are administered by the Trust for the benefit of the natives living thereon. No rent is payable by natives living on location land, who are liable only for the usual hut tax of 14s. per hut per annum; but mission reserve natives, in addition to the hut tax referred to, pay a rental of £1 per

annum, of which half is remitted to the missionary bodies for educational purposes, the remaining half being held in trust for the natives. Act No. 49 of 1903 which transferred the trusteeship to the *Natal Native Trust* deals with the control of these reserves.

Prior to the constitution of the Union the members of the Executive Council for the time being were *ex officio* members of the *Natal Native Trust*, but Act No. 1 of 1912 makes provision for the delegation by the Governor-General to the Minister of Native Affairs of the administration of all such matters as were on the 31st May, 1910, and since that date administered by any legally constituted *Native Trusts*. Both locations and mission reserves are held under deeds of grant from Government, the latter being tracts of land in various parts of the Colony, set apart in order that the missionary bodies referred to in the deeds of grant may have a fixed population among which to carry on their labours. These grants were made between 1862 and 1887.

Up to 1890 no rents were collected in the mission reserves except for a few store sites. The rule requiring payment of rent from new tenants as a condition of allowing them to come on the reserves was passed in 1888, but no rents were collected before 1890. The rent varied from time to time and in different reserves, but was fixed in 1919 at a uniform rate of £1 per annum payable by the occupier of each hut.

With a view to introducing some form of individual land tenure on the mission reserves in this Province, approval was given to a preliminary survey and investigation of the Ifafa and Amanzimtoti Reserves. The Ifafa Reserve is 6,209 acres in extent and Amanzimtoti 8,077 acres.

The system is being introduced on the following lines :—

(*a*) For monogamous residents lots will be surveyed to the extent of 13 acres ; (*b*) the title of occupation will be issued in respect of each lot ; (*c*) a minimum rental of £1 per annum per lot will be charged in lieu of the present hut rental ; (*d*) the cost of the survey will be borne from the Mission Reserve Funds ; and (*e*) steps will be taken as soon as legally possible to constitute Advisory Boards.

Amongst other activities of the *Natal Native Trust* may be mentioned the Mooi River and Tugela River Irrigation Works and the Zwartkop afforestation scheme.

2. **Putili and Other Trusts.**—(i) *Putili Trust.*—This was originally a separate Trust constituted under indenture dated the 18th September, 1878, but on the 28th February, 1908, the Governor of Natal appointed the Natal Native Trust to be sole trustees of the Putili Fund. The Trust is now administered in the same manner as the other locations in the Province.

(ii) *Umnini Trust.*—The Umnini Trust was created by indenture in 1858, and consists of three trustees, the Chief Native Commissioner and his successors in office, the chief of the Amatuli Tribe, and a third member. The only revenue which the Trust derives is in respect of Lots 47, 48 and 49, Umnini Location, which are let at a rental of £10 per annum. In order, therefore, to carry on the work connected with the two dipping tanks in the location a voluntary levy on the natives was agreed to in 1914.

(iii) *Zululand Native Trust.*—This trust is constituted under deed of grant, dated the 6th April, 1909, and is administered in the same way as the Natal Native Trust. The agreements which were in existence with regard to store sites in Zululand at the date of Union have been replaced by 99 year leases. The area in each case is a hundred acres where occupation was prior to annexation, and twenty acres if taken up afterwards. The rental is £5 per annum.

(iv) *Impapala Lots.*—Certificates in respect of these lots were issued in October, 1912, authorizing occupation on payment of a rental of 2s. per annum per acre and 10s per annum towards the estimated cost of survey, until the total cost of survey had been paid in full. Seven out of eighty-five lots still remain vacant. The extent of the plots vary from nine to thirty-five acres with a total area of 2,638 acres. There are thirteen commonages evenly distributed over the whole settlement varying in extent from eleven to 150 acres, with a total of 694 acres, leaving for actual occupation 1,944 acres, on which are resident the Christian natives or their descendants who migrated there in 1886, mostly from the Natal American mission stations.

§ 7. Education and Religious Influences.

1. **Education.**—(i) *General.*—Strictly speaking, the ordinary distinctions drawn between various grades of education do not obtain in the case of native education, which cannot in any sense be called *higher education*. But having regard to the average degree of education amongst the natives, it may be laid down that education up to and including Standard IV is *primary*, from the native point of view ; everything above that may be classified, for present purposes, as *higher education*.

All state and state-aided native education in the Union, with the exception of that represented by the South African Native College, is controlled by the Provincial Administrations in terms of § 85 of the *South Africa Act*. Native education, other than state and state-aided education, is under the control of missionary societies. In consequence of this arrangement, the supervision of the education of the natives has been made distinct from the administration of all other native matters—a circumstance which has inevitably resulted in the almost complete divorce of native education from the general native policy of the Union Government. The Native Affairs Commission, in its annual report for 1921, strongly recommended that native education should be controlled and administered by the Union Government in view of existing Provincial anomalies and the inadequate financial provision made under the present system. It may be noted, as a fact which has some bearing on the point, that there has appeared a growing inclination amongst a certain section of the native population, particularly in the Transkeian Territories, to secularize native education and to obtain a larger direct share in its management. Statistics of native education will be found in Chapter IV, which also contains particulars of the organization of native education in the various Provinces, forming as it does an integral portion of the general educational systems in force in these Provinces. The details given in the following paragraphs are an extension of these observations, and show more particularly what is being done by the several Provinces in providing for the education of the natives.

A conference on native education, attended by representatives of the Native Affairs Department, the Native Affairs Commission, and the Provincial Education Departments, was held in March, 1923. As a result, uniform scales of pay for native teachers were laid down.

Section 3 of Act No. 46 of 1925 provides for grants of fixed amounts in respect of the financial year 1925–26 direct to the various Provinces for the purposes of native education as follows :—

Cape Province, £240,000 ; Natal, £49,000 ; Transvaal, £46,000 ; Orange Free State, £5,000. From the year 1926–27 onwards, a fixed annual contribution of £340,000 will be made from the public revenues, not direct to the Provinces, but to an account to be established, styled the Native Development Account. From this account grants will be made to the Provinces for the maintenance, extension, and improvement of educational facilities among natives, and for the adjustment of the salaries of native teachers, subject to such conditions as may be fixed by the Governor-General after consultation between the Minister of Native Affairs and the Administrator concerned.

Funds for the further expansion of native education are, however, to be derived from the proceeds of direct taxation upon the natives themselves in terms of section 13 of Act No. 41 of 1925.

(ii) *Cape of Good Hope.*—The activities of the Transkeian Territories and Pondoland General Councils and the Eastern Pondoland Trust Fund in connection with education are dealt with in § 4 of this chapter.

In Eastern Pondoland an education fund was created in 1916 under which the Pondos agreed to an annual tax of not less than 2s. per head being imposed on them, the proceeds to be devoted to their educational needs. Estimates of expenditure for the year 1921–22 were approved at £2,720, and the revenue for the same period was estimated at £3,100. In June, 1919, the Administrator of the Cape appointed a Commission to investigate the whole question of native education in the Province. Its report, a most valuable one, was issued in 1920 (C.P. 4-'20). Some of the Commission's recommendations have already been carried out, notably the appointment of a Chief Inspector of Native Education and the preparation of a draft curriculum especially designed for native schools.

(iii) *Natal.*—In Natal the personnel of the Inspectorate Branch of the Education Department was reorganized so as to make specific provision for native education. There is also the *Native Education Advisory Board*, consisting of representatives of all missionary denominations, the Chief Inspector of Native Education, and the Chief Native Commissioner. As a further step in the direction of native education the Government in 1918 established an institution where the sons of chiefs and indunas in Natal may be educated so as to fit themselves for the various duties they are called upon to perform.

A grant of £150 per annum was made to the St. Hilda's Native Girls' College, Klip River District, towards the salary of an instructor in spinning and weaving, with a view to the encouragement of this industry amongst native women. Grants are also made from the Natal Mission Reserve funds to the Adams Mission Station at Amanzimtoti, with the object of encouraging native industrial education, and more particularly agriculture.

(iv) *Transvaal.*—In the Transvaal, in order to assist native schools not under European supervision to earn the grants made from the Provincial Administration funds, by arrangement with the Education Department, the Native Sub-Commissioners act as correspondents to such schools, when approached, and generally assist in the work of supervision on behalf of the education authorities.

An *Advisory Board on Native Education* in the Transvaal was constituted in November, 1924, with representatives of various religious denominations, the Native Affairs Department, and the Provincial Education Department.

2. **Higher Education.**—(i) *General.*—There are numerous institutions in the Union which endeavour to provide for the needs of the native peoples in regard to higher education, i.e. education beyond Standard IV, including industrial, agricultural, and commercial education, preparation for religious ministry, and the teaching profession. The leading institutions are :—

Cape of Good Hope.
Lovedale.
Blythswood.
Healdtown.
Bensonvale.
St. Matthew's (Keiskamahoek).
Shawbury (Qumbu).
St. John's College (Umtata).
Buntingville (Umtata).
Lesseyton (Queenstown).
Peddie.
Zonnebloem College.
Tiger Kloof (Vryburg).
Emfundisweni.
Clarkebury.

Natal.
Adams Training Institution.
Edendale.
Amanzimtoti.
Marianhill.
Ohlange.
Moddersprui t.
Indaleni.

Transvaal.
Kilnerton (Pretoria).
Diocesan College (Pietersburg).
Botsabelo (Middelburg).

Orange Free State.
Thaba 'Nchu.
Stofberg Gedenk.

(ii) *The South African Native College.*—The principal event, however, since the constitution of the Union in this connection has been the establishment of the South African Native College. As early as the year 1880 it was recognized that, if the desire for education on the part of natives of South Africa continued to grow, it would sooner or later be necessary to provide an institution capable of giving an education, under Christian auspices, up to a University standard. If this were not done they would seek education in America and other countries. In 1905 the *South African Native Affairs Commission* recommended " that a Central Native College or similar institution be established and aided by the various States for training native teachers, and in order to afford opportunities for higher education to native students." After the death of Dr. Stewart, of Lovedale, in 1905, a convention of natives from all the States of South Africa was held at Lovedale to consider the steps that should be taken to give effect to the recommendation of the *Inter-Colonial Native Affairs Commission*, and as a result a petition was presented to the High Commissioner, and the various Governments of South Africa, praying that an Inter-State Native College should be established. The interest of the natives in the scheme was manifested by the grant of £10,000 by the *Transkeian Territories General Council* in 1907 towards this object, and the United Free Church of Scotland offered a site at Fort Hare, in the Victoria East District, as part of a contribution of £5,000. Other contributions were made or promised. In 1908 a Select Committee on Native Education appointed by the Parliament of the Cape Colony reported in favour of support being given to the Inter-State College, but the materialization of the College scheme was delayed.

In November, 1914, an important step forward was taken when the Constitution of the College, which had been submitted in draft to the contributors and various bodies interested, was finally adopted. The Governing Council of the College, established under the Constitution, held its first meeting in January, 1915, and took over the funds hitherto administered by the Executive Board. The Council decided that the site offered by the United Free Church of Scotland was suitable for the purposes of the College, which, in view of the incorporation in the Union of the various States interested in its foundation, was called *The South African Native College.* The Government of the Union further pledged its support by promising an annual grant, and appointed its representatives to the Governing Council, a step that was also taken by the University of the Cape of Good Hope (later University of South Africa), and by the various contributing bodies.

The College is designed ultimately to provide a liberal education of University standard, and also training for those who wish to qualify themselves to enter upon one of the learned professions or to follow the higher branches of agriculture, commerce, industries, or domestic arts.*

3. **Orange Free State Imperial Grant.**—Out of a grant of £2,000,000 made by the Imperial Government as war compensation for natives in the Orange Free State, a sum of £39,000 remains unexpended, and the natives urged on the Government that this money should be used for educational extension, more particularly higher education. The Minister of Native Affairs decided that the wishes of the natives should be met, and the Government has under consideration the measures necessary for carrying these proposals into effect.

* In October, 1923, the College was declared to be " a place of higher education " under Act No, 30 of 1923, and its scheme of government was prescribed. As a result of this development, the College became eligible for the receipt of grants in aid of higher education under the Act.

Grants are now made from the interest on this fund to approved institutions in respect of natives from the Orange Free State receiving education in standards above Standard IV or industrial training. The grant, originally £15 per annum for each such student, has, in consequence of the exhaustion of the accrued interest on the fund, been reduced to £12, and the number of grants have been strictly limited in order to preserve the capital amount intact. It has also been decided, in view of the primary interest of the Orange Free State in the fund, that institutions in that Province shall have a first claim in respect of the grants. A Committee, under the chairmanship of the Principal of the South African College, which enquired into the means of using the capital of the fund for the furtherance of higher education, prefaced its report by the statement that " the present condition of native elementary education in the Province of the Orange Free State makes the success of any scheme of higher education doubtful, if not impossible." In view of this opinion, no action has been taken to carry out the scheme suggested by the Committee, which would, moreover, involve an expenditure largely in excess of the funds available.

4. **Native Separatist Churches.**—There are about one hundred and thirty-two separatist churches, and the tendency is for the number to increase rapidly. One of the difficulties in dealing with these bodies is the question of the appointment of their ministers as marriage officers, a matter which received consideration from a Select Committee of the Senate in 1913. The recommendations of that Committee were as follows :—

> In the Transvaal and Orange Free State Provinces, only European ministers are recognized as marriage officers to celebrate marriages by Christian rites, although there is nothing in law to prohibit the appointment of natives as marriage officers. In the Cape Province ordination as a minister of the Christian religion in accordance with the *Marriage Order in Council* of 1838, automatically entitles a native to celebrate such marriages ; while in Natal, where all marriage officers must be licensed, it has not been the practice to refuse licences to duly ordained native ministers of recognized churches. Your Committee considers that a native who has been ordained a minister of an established European church should, while remaining associated with such church, be deemed by the State worthy to be entrusted with the duty of celebrating as a marriage officer a marriage by Christian rites, and is of opinion that duly ordained native ministers of such churches should be recognized as marriage officers throughout the Union.
>
> In the case of native ministers belonging to purely native churches which have not by length of existence, or by the magnitude and stability of their work or by other means shown themselves to be entitled to recognition, your Committee does not consider it desirable to place them on the same footing. But, in its view, ministers of purely native churches should be appointed marriage officers during the pleasure of the Governor-General, if they are able to prove to the satisfaction of the Government that they are of good character, are educationally fit, and possess a sufficient knowledge of the marriage laws for the office ; and further, that their appointments are reasonably necessary to meet the needs of substantial congregations coming under their ministrations.

This policy is now pursued ; the Department of Native Affairs is satisfying itself in regard to the character, antecedents, and standing of the applicant and the church which he represents, and as to the reasonable requirements of the congregation coming under the applicant's ministration. Over 100 native ministers of separatist churches hold appointments as marriage officers.

The most fruitful cause leading to the increased establishment of such churches is to be found in jealousies and differences frequently leading to open quarrels amongst natives over the question of supremacy in the church. Repeated schisms occur, each side claiming to have expelled the other from the church for insubordination, and both coming separately to the Government with a request for State recognition of their church. In 1921 a Commission was appointed to inquire into the origin and activities of these bodies. The inquiry of the Commission has been completed and its report published. (U.G. 39—'25.)

§ 8. Stock Dipping Operations.

1. **Development of System of Stock Dipping.**—Responsibility for the inauguration of regular and systematic dipping of stock in native areas was assumed by the Native Affairs Department by arrangement with the Department of Agriculture.

On the 31st December, 1921, there were under the supervision of the Department in the Cape Province proper 74 tanks, in the Transkeian Territories 446, in Natal 422, and in the Transvaal 292. All these tanks have been constructed and are being maintained at the expense of the natives. In the Transkeian Territories this expenditure is met in a variety of ways : in seventeen districts by a stock rate, and in one district by a charge of ½d. per head dipped. In Western Pondoland dipping is paid for out of the annual general rate of 10s. per adult male ; in Eastern Pondoland by a special rate of 6s. 6d. on each hut-tax payer. In the only native location in the Mount Currie district a poll rate of 5s. is levied. In Natal a general dipping levy of 6s. per adult male is charged. In the Cape Province and in the Transvaal the cost of construction and maintenance is being met by special rates under the *Dipping Tanks Advances Act* or by voluntary levies or levies under *Government Notice* No. 1348 of 1924.

In the Transkeian Territories, except in the district of Idutywa, where dipping operations are in charge of a committee consisting of natives, control is exercised by the Magistrate and the District Council, where such exists, under the directions of the Chief Magistrate. The 446 tanks in the Territories are served by a staff of 56 European supervisors, 15 native assistant supervisors, and 203 native foremen.

In the Glen Grey district the District Council exercises control and in Natal the Department has special dipping supervisors. In the other areas the local officers of the Department are in general control, assisted where necessary by specially-appointed supervisors.

The number of native-owned cattle in the Transkeian Territories (excluding the districts of Mount Currie and Idutywa) increased during 1920 by 72,018. The number of head on the 1st January, 1918, was 490,179; 1919, 572,369; 1920, 661,349; 1921, 733,367. In Natal the cattle in native areas have increased during the last three years from 350,000 to 520,000, and the value of the stock, both large and small, is said to be not less than £6,000,000.

2. **Expenditure on Dipping Tanks.**—The following figures represent as at 31st March, 1925, the capital cost, the expenditure, and the receipts in respect of dipping tanks in native areas completed under the provisions of the *Dipping Tanks Advances Act* of 1911 :—

DIPPING TANK EXPENDITURE AND RECOVERIES TO 31st MARCH, 1925.

Area.	Expenditure.			Receipts.			Balances.

§ 9. Control of Natives.

1. **Natives in Urban Areas.**—Before the establishment of the Union the control and administration of matters affecting natives in urban areas were vested in the local authorities having jurisdiction. These functions were exercised through regulations framed under statutory powers and subject before promulgation to the approval of the central governments of the various colonies. There were thus two ways in which the law regarding such natives might differ between colony and colony. In the first place the powers granted by statute to the local authorities varied to a very great extent, and in the second place the policy of one central government was to restrict the action of local authorities, while that of another was to allow every latitude in the control of the native population.

The *South Africa Act* (Section 85) granted to the Provincial Councils power to make Ordinances in relation to all matters affecting local authorities and all matters which in the opinion of the Governor-General-in-Council were of a merely local or private nature. Section 147 of that Act, however, vested in the Governor-General-in-Council the control and administration of native affairs throughout the Union. The question which arose immediately after the constitution of the Union was whether in the exercise of their powers in regard to natives the local authorities were to be subject to the Provincial or to the Union Government, in other words, whether regulations differentially affecting natives framed by the local authorities required merely the approval of the Executive Committee or whether they required in addition the approval of the Governor-General-in-Council. It was decided that the powers in question should be reserved to the Union Government in view of Section 147 of the *South Africa Act*. The Native Affairs Department has therefore since 1910 been concerned in this connection with (1) the oversight of all regulations submitted for approval and (2) the preparation of legislation affecting natives.

The conditions prevailing in the urban native locations in all the Provinces of the Union have been far from satisfactory. This may be attributed to several factors, of which two at least, though fairly well defined, can only be combated by the slow processes of education and experience—namely, the attitude of local authorities towards the native and the passive indifference or occasionally active hostility of the natives themselves. A third factor, largely conditioned by the others, but easier to deal with, because more concrete, is the admitted inadequacy of the existing native legislation. Local authorities derive their powers of regulation in native matters from the laws governing their activities which were in many cases enacted before the constitution of the Union, and which were characterized by a wide divergence of policy between the various legislatures.

The pre-existing statutory provisions in force in the various Provinces in regard to the control of natives in urban areas have now been superseded by the *Native (Urban Areas) Act*, No. 21 of 1923, which came into operation on the 1st January, 1924. It is a comprehensive enactment providing, in terms of the title—

> for improved conditions of residence for natives in or near urban areas and the better administration of native affairs in such areas; for the registration and better control of contracts of service with natives in certain areas and the regulation of the ingress of natives into and their residence in such areas; for the exemption of coloured persons from the operation of pass laws; for the restriction and regulation of the possession and use of kaffir beer and other intoxicating liquor by natives in certain areas and for other incidental purposes.

Generally it defines and describes the powers and the duties of urban local authorities in respect of the native population within their areas, requiring them to set aside land for the accommodation of the natives who are legitimately within their boundaries. It provides in cases where it may be expedient, for the compulsory residence of natives, with certain exceptions, in locations, native villages or hostels, and gives to the local authority powers of expropriating land and borrowing money to meet the responsibility thrown upon it. It lays down certain principles to be followed in the administration of native affairs, such as the establishment of a native revenue account and of native advisory boards, and makes provision for government inspection. In view of the responsibility thrown on local authorities the Governor-General is authorized to confer or exercise by proclamation certain powers of control, whereby the native population may be limited to the number legitimately required for the needs of the community. These powers may also be exercised in industrial areas other than those under the jurisdiction of an urban local authority. The Act prohibits the introduction of intoxicating liquor into locations, native villages, or hostels, but allows, subject to varying circumstances, the private brewing of kaffir beer or its manufacture and sale by the local authority. It further limits the right of trading in a native village or location to native enterprise or if that should not be adequate, authorizes municipal trading in these areas.

Model location regulations framed by the Native Affairs Department for the guidance of urban local authorities were published in Government Notice No. 672 dated 22nd April, 1924. Regulations, based on the model series, have been promulgated under Section 23 of the new Act in respect of numerous urban areas, and make due provision for the control of locations and the establishment of Native Advisory Boards. The system of registration and control provided for in Section 12 of the Act has been applied to the principal urban, mining, and industrial areas in the Transvaal, and is administered by the Government in continuance of the pre-existing practice in that Province. The system has been extended to Bloemfontein and a few other urban areas in the Orange Free State, where, however, the regulations are administered by the local authorities. The provisions of Section 21 of the Act, under which an urban local authority may be granted exclusive rights of manufacture, sale, and supply of kaffir beer have not as yet been adopted by any urban local authority outside of Natal. Funds have been provided by the Government, out of which, through the medium of the Provincial Administrations, loans may be obtained by urban local authorities for housing purposes, and it is satisfactory to note that several of these bodies have made application for such loans with a view to improving the housing accommodation of natives in the locations under their control.

2. **Pass Laws.**—Pass Laws based on various statutes are in operation throughout the Union, with the exception of the Cape Province (excluding the Transkei), where the natives (unless accompanied by live stock) enjoy entire freedom of movement. The question of the pass laws was referred to the Select Committee on Native Affairs appointed by the House of Assembly in 1914. This Committee reported that it considered it inadvisable to attempt at that stage to legislate with a view to the consolidation of the pass laws in force in the different Provinces, but that such legislation should await the action to be taken by Parliament on the report of the Natives Land Commission then sitting. At the same time the Committee recognized that there were certain defects in, and grievances under, the pass laws, which might be remedied as a temporary measure pending consolidating legislation, and it accordingly recommended for the consideration of the House a draft Bill, the text of which will be found in the Committee's report [S.C. 84—'14]. During the war

period it was not found possible to introduce this amending Bill, but administrative action was taken to relieve the situation in certain directions.

A Departmental Committee of Inquiry was appointed in December, 1919, which fully investigated the pass question in all four Provinces, and presented a report to the Government. The report was published in 1923 (U.G. 41 of 1922). After consideration of the subject by the Native Affairs Commission, a Bill, embodying in the main the recommendations of the Committee and entitled *The Native Registration and Protection Bill*, was introduced into Parliament during the 1923 Session as a complementary measure to the *Urban Areas Bill* (see paragraph 1 above). Considerable opposition being shown to certain of its provisions, it was withdrawn for further consultation with the natives. Certain sections were, however, transferred to the *Urban Areas Act* as being essential to the successful administration of that measure.

3. **Exemption Laws.**—There are three *Exemption Laws* operating in the Union, namely: Proclamation No. 35 of 1901 (Transvaal), Ordinance No. 2 of 1903 (Orange Free State) and Law No. 28 of 1865 (Natal). The two former measures exempt well-educated adult male natives pursuing various defined occupations from the operation of the pass laws, and in the Transvaal also from payment of native taxes and from the provisions of certain other laws specially applying to natives. The Natal statute exempts both male and female natives of advanced civilization from native law as in force in the Natal Province.

The question of the consolidation of these laws or alternatively of arranging for *Letters of Exemption* issued in any one of the Provinces to operate in the remaining Provinces has been considered by the Department of Native Affairs. Owing, however, to the entirely different character of the Natal law and the wider exemption provided under the Transvaal law as compared with the law in the Orange Free State, it has not been found practicable to give effect to the alternative without legislation. The subject came within the cognizance of the Departmental Committee on the Native Pass Laws whose recommendations, set out in the report mentioned above, were embodied in the *Native Registration and Protection Bill* of 1923 (see paragraph 2 above). In the meantime the existing exemption enactments are administered in the most liberal manner possible.

In terms of the *Native Taxation and Development Act*, No. 41 of 1925, the immunity from the payment of native taxes hitherto enjoyed by the holders of Letters of Exemption in the Transvaal disappears.

§ 10. Taxation.

1. **Sources of Revenue.**—The following is a summary of the principal sources of native revenue in the various Provinces (as distinct from rents, rates and fees, etc., paid by natives to properly constituted bodies and trusts). (See paragraph 2 following.)

(i) *Cape Province* (apart from Transkeian Territories)—

(*a*) *Hut Tax.*—(1) On Crown Lands a tax of 10s. per hut is imposed by section 11 of Act No. 37 of 1884. Hut tax is levied in all Crown Locations (except where quitrent is claimable as in the case of the surveyed locations under Act No. 40 of 1879), including the Bechuanaland Reserves. (2) On private property the hut tax has been replaced by private location fees imposed under section 6 of Act No. 32 of 1909.

(*b*) *Quitrent.*—Quitrents are imposed either in surveyed locations under the *Glen Grey Act*, No. 25 of 1894, or in locations surveyed under Act No. 40 of 1879.

(ii) *Transkeian Territories.*—A hut tax of 10s. per annum is levied under section 2 of Proclamation No. 320 of 1904 on every holder of an arable allotment in crown land locations which have not been surveyed. On surveyed Crown land locations a quitrent is substituted for the hut tax. Private location fees are imposed in lieu of the hut tax in respect of natives residing on private property in the Matatiele and Mount Currie districts.

(iii) *Natal.*—A hut tax of 14s. per hut is imposed on all natives resident in the Province with the exception of those living in houses of European construction and having only one wife, and generally conforming to civilized usages. In addition a rent of £2 is levied in respect of every native hut on Crown lands as distinct from locations.

(iv) *Transvaal.*—A tax of £2 is levied on every adult male native under section 3 of Act No. 9 of 1908 with a remission of £1 in respect of municipal location residents and *bona fide* farm labourers. In addition, a native squatting on Crown lands as distinct from locations has to pay a rent of £1. 10s. per annum, plus a grazing fee for stock in excess of a limited number.

(v) *Orange Free State.*—Under Ordinance No. 2 of 1904 a poll tax of £1 per annum is levied on all male coloured persons who have personally resided in the Province for a period of at least six successive months during the year in respect of which the tax is payable.

2. **Consolidating Legislation.**—The question of consolidating the various taxation laws has been continually under consideration since the constitution of the Union, and in 1911 a draft consolidating measure was prepared by the Inland Revenue Department. Action has, however, been postponed. In the meantime, with a view to bringing the collection of tax in Natal into line with the practice obtaining in other parts of the Union, and also meeting the wishes of the natives themselves, fresh regulations, under section 3 of Law No. 13 of 1875 (Natal), were promulgated in 1917, transferring the onus of payment from the kraal head to the hut owner.

In accordance with a recommendation of the Native Affairs Commission, Act No. 5 of 1922 provided that a Provincial Council shall not have the power to make an Ordinance imposing direct taxation upon the persons, lands, habitations, or incomes of natives. The Act further provided that grants for the extension and improvement of educational facilities amongst natives and for the adjustment of salaries of native teachers should be made out of revenues derived from the direct taxation of natives by the Union Government. The necessity of providing funds from which these grants may be made has brought the whole question of the consolidation and amendment of the various taxation measures under urgent review, and a Bill has been prepared for submission to Parliament. The principles of the Bill were discussed with representatives of the native people at the Native Affairs Conference held in September, 1924.

This Bill became law in the 1925 Session of Parliament in the shape of "*The Natives Taxation and Development Act*, No. 41 of 1925." Its object is "to consolidate and amend the law relating to the taxation of natives and to provide additional funds for the development, education, and local government of natives." The Act came into operation on the 1st January, 1926, and superseded existing pre-Union systems of taxation. Every adult male native in the Union pays a general tax of £1, and every native occupier of a hut or huts in a native location as defined in the Act pays a local tax of 10s. per hut. Natives paying quitrent are exempt from the payment of local tax.

The local tax and quitrent will be allocated to native councils enjoying a certain measure of local self-government for expenditure in the areas falling under their jurisdiction. Any local tax or quitrent collected in respect of any area not falling under the jurisdiction of a native council will be paid into a "Native Development Account" together with one-fifth of the general tax. The objects of this account will be, *inter alia*, to maintain, extend, and improve the educational facilities amongst natives and generally to develop and advance the welfare of natives.

Provision is also made in the Act whereby a native tribe may voluntarily subject itself to the levy of a special rate for purely tribal purposes.

Particulars of native revenue collected are given in Chapter XXII.

§ 11. Native Labour.

1. **The Native Labour Regulation Act.**—The Union Act No. 15 of 1911 consolidated the laws in regard to the recruiting and employment of native labour previously in force in the various Provinces. This law follows generally the line of the previous Transvaal regulations, which, however, were considerably amplified and expanded with the addition of provision for the payment of compensation in the case of accident. The executive duties under the Act are carried out, as under the Transvaal regulation, by an officer styled the *Director of Native Labour*, with headquarters in Johannesburg; they include the issue of licences to employers and agents to recruit natives, and to compound managers, and the assessment of compensation. The Director has power to cancel contracts, to repatriate sick natives, and to exercise control and protection over native labourers, more particularly in *Labour Districts*.

Labour Districts can be proclaimed by the Governor-General where large numbers of natives are employed either in mining, industrial, or other work. In such areas stricter pass regulations are applied, and, where more than fifty natives are employed, compound managers are appointed to supervise and control them, investigate their complaints, and attend to their lawful requirements. Government inspectors are also appointed to inquire into native grievances and settle disputes, and special regulations are in operation in regard to housing, feeding, and the provision of hospital accommodation. Fourteen such *Labour Districts* in the Transvaal, which were established prior to Act No. 15 of 1911—namely, Randfontein, Krugersdorp, Roodepoort, Johannesburg, Germiston, Boksburg, Benoni, Springs, Witbank, Rayton, Klerksdorp (deproclaimed in 1920), Heidelberg, Vereeniging, and Rooiberg (deproclaimed in 1923)—were reproclaimed under the new Act by Proclamation No. 300 of 1911. In addition new *Labour Districts* have been constituted at Christiana, Barkly West, Kaalplaats in the district of Potchefstroom, Lichtenburg, and Hopetown, to embrace the alluvial diggings in these areas, and at Breyten in respect of the Ermelo coal area. *Labour Districts* were also established in the Orange Free State, namely, Heilbron,

Vierfontein (deproclaimed in 1920), Fauresmith, Boshof, and Voorspoed, to embrace the various coal and diamond mines in that Province, while the coalfields of Natal are included in the labour districts of Vryheid and Dundee.

Under section 19 of the Act, inspectors were appointed on the Witwatersrand to perform judicial functions, to act as protectors of natives, to visit the compounds, inspect conditions under which natives are accommodated, inquire into complaints of natives, and put forward their claims for compensation for injuries sustained or for disability due to phthisis or tuberculosis. In addition, inspectors were appointed in other areas of the Transvaal and for Kimberley, Barkly West, and the Orange Free State. Two inspectors are also stationed on the Natal coalfields, and another supervises labour conditions on the sugar estates, etc., along the coast of Natal and Zululand.

The following table gives the number of recruiting licences issued under the Act for a period of years.

ISSUE OF RECRUITING LICENCES, 1913 TO 1924.

Year.	Cape.	Natal.	Transvaal.	Orange Free State.	Total.
1913.....	1,495	311	237	5	2,048
1914.....	923	153	176	5	1,257
1915.....	542	83	125	4	754
1916.....	498	73	91	3	665
1917.....	446	80	79	3	608
1918.....	550	86	85	2	723
1919.....	551	101	78	1	731
1920.....	527	88	67	1	683
1921.....	502	64	53	1	620
1922.....	442	62	66	1	571
1923.....	448	69	81	5	603
1924.....	485	60	61	5	611

The fees payable annually for licences are as follows :—

		£
(*a*)	For a district labour agent's licence.....	6
*(*b*)	„ Provincial labour agent's licence.....	25
*(*c*)	„ Union labour agent's licence.....	50
(*d*)	„ compound manager's licence.....	1
(*e*)	„ conductor's licence.....	1
(*f*)	„ employer's recruiting licence.....	1

If, however, the licence be issued after the 1st July, in any year, only half the fee is payable in each case. In order to recruit in more than one district, a labour agent must obtain the endorsement of his licence by the Director in respect of each additional district. For each such endorsement a fee of £1 is payable.

Soon after the coming into operation of the Act it was found necessary to secure as far as possible a more equal division between conflicting industrial, mining, and agricultural interests in the different parts of the Union, and to safeguard any district not possessing a large native population against being denuded of its labour supply through the activities of labour agents acting on behalf of employers at other centres. With this end in view special regulations were issued embodying conditions on the issue of employers' and labour agents' licences. The object of these regulations was as far as possible to secure that only in cases where there was a large surplus native population in a district should recruiting be allowed. At the same time no obstacle was placed in the way of natives voluntarily proceeding to districts which in their opinion offered the most attractive spheres of labour.

On the whole these regulations have operated fairly and, although the tendency is for native labour still to flow in an increasing degree towards the Witwatersrand and the mining industries, this is chiefly due to the higher wage obtainable there and the superior feeding and housing conditions prevailing. The Native Labour Department is, however, endeavouring as far as possible to assist the farming industry by encouraging natives rejected for mine work to engage for farm labour, and by allowing labour agents to recruit for farmers under special conditions.

2. **Transvaal-Mozambique Convention.**—The entry into the Union of native labourers from Portuguese territories is governed by Part I of the Transvaal-Mozambique Convention,

* No Provincial or Union labour agents' licences have as yet been issued.

which remained in force after the expiration of the rest of the Convention on the 31st March, 1923. The text of the agreement on this point will be found in the sixth issue of this *Year Book*.

3. **Natives Employed in Labour Districts and Kimberley.**—The subjoined tables give an analysis of the natives employed in proclaimed Labour Districts classified according to the territory from which the labour has been obtained. Prior to 1922, figures related to Transvaal Labour Districts only, but since 1922, figures relate to labour districts throughout the Union (excluding alluvial diamond diggings) and Kimberley :—

NATIVES EMPLOYED IN LABOUR DISTRICTS IN EACH YEAR 1910 TO 1924.

Year.	Union.				Portuguese Territories.	Basutoland.	Bechuanaland Protectorate.	Swaziland.	Other Territories.	Grand Total.
	Cape.	Natal and Zululand.	Transvaal.	Orange Free State.						
(i) TOTAL NUMBER EMPLOYED AT 31ST DECEMBER OF EACH YEAR.

* Figures for 1910 not available.

4. **Deposit and Remittance Agency.**—Regulations were issued under the *Native Labour Regulation Act* relative to the Native Deposit and Remittance Agency established at Johannesburg and its sub-agencies. Since 1913 the following amounts have passed through its books :—

DEPOSIT AND REMITTANCE AGENCY ACCOUNT, 1913 TO 1924.

Year.	Remittances.	Deposits.	Year.	Remittances.	Deposits.
	£	£		£	£
1913.....	40,573	30,930	1919.....	41,745	21,273
1914.....	40,401	21,982	1920.....	28,567	21,595
1915.....	41,742	1,450	1921.....	21,323	10,058
1916.....	52,409	2,740	1922.....	19,909	6,687
1917.....	80,138	14,279	1923.....	15,794	8,879
1918.....	99,469	17,723	1924.....	15,031	11,181

Many natives, however, still continue to remit large sums of money through the agency of friends returning home, employers, and recruiting organizations. Certain of the latter, with the consent of the Government, recruit on contracts under which a portion of the wages stipulated for is paid on the return of the natives to their homes.

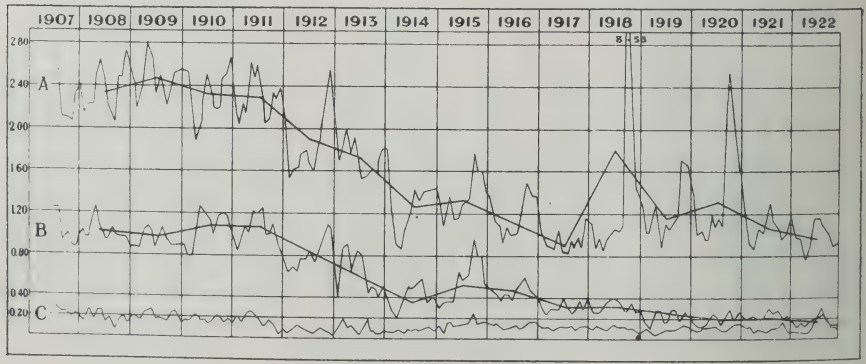
5. **Compensation.**—Under section 22 of the Act, the Director is charged with the duty of assessing and obtaining from employers the amounts payable under the Act for accidents. This principle has been further extended to payments for phthisis, and the amounts payable in case of death have been increased. There is still a considerable amount of dissatisfaction amongst the natives in regard to the present system of compensation, which, however, is a considerable advance on the practice in vogue prior to the passing of the Act. The *Miners' Phthisis Act*, No. 40 of 1919, makes adequate provision for the compensation of native sufferers from silicosis and tuberculosis.

6. **Health and Disease.**—Since the issue of the new regulations and the organization provided under the Act, there has been a steady decline in the death rates. As the result of debates in Parliament in 1912 and 1913, energetic steps were taken with the object of combating the mortality from pneumonia. In the first place the further importation of tropical natives was prohibited, and special measures were adopted in the case of those still employed. Change-houses and waiting-rooms were established at the heads of mine shafts where natives coming off shift could obtain an adequate supply of warm water for washing, and warm clothing in the winter weather. These change-houses have since been in many cases adopted by the mines for all natives.

In addition, on the invitation of the Chamber of Mines, Surgeon-General Gorgas with two other American medical experts visited the Rand and furnished a report on the health conditions. Their recommendations included the establishment of the village hut system, the introduction of families and the centralization of hospitals.

The investigations of the South African Institute for Medical Research and the discovery of a prophylactic for pneumonia have made possible the control of this disease to a very large extent.

MORTALITY OF NATIVES IN TRANSVAAL LABOUR DISTRICTS.



The following tables gives particulars of mortality amongst natives in certain classes of work and in certain areas.

NOTE.—Prior to 1922, figures related to Transvaal Labour Districts only. From 1922 onwards, figures relate to all Labour Districts throughout the Union (excluding alluvial diamond diggings) and Kimberley.

7. **Mortality from Disease amongst Mine Labourers.**—Dr. W. Watkins-Pitchford, Director of the South African Institute for Medical Research, has prepared a chart, reproduced on page 596, illustrating the monthly mortality rates per 1,000 employed natives, for all diseases, for *lobar pneumonia*, and for *meningitis*, amongst the native labourers on the mines and works in the proclaimed labour districts of the Transvaal. The chart contains three series of records. The topmost curve (A) represents the monthly death-rate from all diseases, whilst superimposed upon it is a bolder line indicating the mean monthly rate for the year; the middle curve (B) is that of the monthly death-rate from *lobar pneumonia*, the mean of the monthly rates being again indicated by a bolder line; and the lowest curve (C) refers to the monthly death-rate from *meningitis*.

The death-rate from all diseases remained uniformly high during the first four years (1908-11); the average of the annual rates for this period was 28·32 per thousand. There is good reason for believing that in the years antecedent to 1908 the death-rate was never materially lower than this figure, and was often considerably above it. The average of the annual rates for the last four years (1919-22) was 13·26, and the rate for the last year (1922) 11·28.

Anti-pneumonia inoculations were begun on the 4th October, 1911, by Sir Almroth Wright, and have been resorted to for the protection of an annually increasing proportion of the natives ever since. At the present time the great majority of the native labourers are inoculated upon arrival at the mines. The large share which *lobar pneumonia* has contributed to the general mortality in the past years is evident from the chart; during the last five or six years this share has become greatly reduced, and the incidence of fatal *lobar pneumonia* is now about the same as that of *meningitis*. In 1913, Sir Spencer Lister, one of the workers at the South African Institute, found that the pneumococci causing *lobar pneumonia* were not all of the same sort; that they could be classified into groups; that 70 per cent. of all cases of *lobar pneumonia* amongst the natives were due to the pneumococci of three particular groups; and that inoculation with vaccine prepared from pneumococci of only one group protected against infections by that group alone. Since these facts were established, the preventive vaccine employed for inoculating the native labourers has comprised selected strains of pneumococcus which are representative of the various groups causing *lobar pneumonia* on the Witwatersrand.

In discussing this chart it must be remembered that it does not represent the mortality amongst inoculated natives only, but the death-rate amongst *all* the native labourers of the mines and works of the Transvaal. The increase in the general mortality in the latter part of 1918, and again in the latter part of 1920, was due to *epidemic influenza*. The slight though definite decline in the mortality from *meningitis*, which coincided with the introduction of anti-pneumonia inoculations, is due to the fact that the pneumococcus is ordinarily responsible for the causation of from 18 to 30 per cent. of cases of *meningitis*.

8. **General Conditions of Native Labour.**—Certain particulars regarding the general conditions of native labour and employment in the Union are given in Chapter VII. The subject has not yet been adequately investigated apart from its bearing on the mining industry; but it is clear, both from general considerations and from the results of the various Industrial Censuses (see Chapter XVII), that the native forms a considerable factor in the industrial organization of the country. This fact implies the concentration in the principal industrial centres of a large body of natives, not very numerous relatively to the total native population of the Union, but constituting a high percentage of the population of the areas concerned. The existence of this class of urban native in manufacturing industry and on the mines has brought in its train a number of problems connected with the control, the remuneration, and the housing of the native worker, and with his relation to the European engaged in the same industry. In recent years tendencies towards industrial and political unrest and some crude form of industrial combination have manifested themselves among urban natives. The strike of 71,000 natives employed on the Witwatersrand mines in 1920 was a phenomenon which had not previously been witnessed in South Africa on a similar scale; and it had particular significance as an evident reflection of sentiments and methods prevailing among European workers.

In its annual report for 1921 the Native Affairs Commission dwelt on this aspect of native evolution, and noted, as symptoms of the new conditions of native life, the increasing disintegration of the old tribal system, the moral decline of the people, the influence of the half-educated agitator, and the existence of a growing dissatisfaction with authority.

9. **Food Consumption of the Native Population.**—A note on this subject will be found in the sixth issue of this *Year Book*.

§ 12. The Natives of South Africa: An Ethnographic Review.

1. **The Physical Aspect.***—The origin of the population found in South Africa by Europeans over four hundred years ago is not known with any degree of scientific certainty. Discoveries made within recent years, however, afford reasonable hope that with the advance of anthropological and geological research in this country the problem will achieve final solution.

In the native population there were found then, as now, three clearly marked groups of peoples, viz. Bushmen, the barbaric nomadic hunters of the desert upland country to the west; Hottentots, the semi-civilized and partially agricultural community of the coastal belt to the south and south-east; and the Bantu tribes of the east and north.

From very early times both prior to and subsequent to the Bantu invasion there have been invasions of the eastern coastal belt by peoples of Asiatic origin. The most recent of these Asiatic intrusions prior to the coming of the European was that of an Islamic Arabian folk. These followed in the wake of earlier intrusions which date back to a very remote period, and it may well be that some pre-Koranic Semitic stock were responsible for the ancient mines and monuments which abound in southern Africa from a latitude far north of the Zambesi in the north to the latitude of Pretoria in the south, and from the Kalahari Desert in the west to the Portuguese East Coast (Bent, 1892; Hall and Neal, 1904; Hall, 1905; Trevor, 1912; Woodburn, 1913; Baumann, 1919; and others). It is at least certain that, whether of recent or ancient arrival, there is an appreciable admixture of Semitic blood in many of the Rhodesian, northern Transvaal, and Portuguese East native tribes. Arabic records indicate that the Bantu invasion of the southern end of the continent has been taking place since the earlier centuries of the Christian era. It is, therefore, generally believed that prior to this time the Bushman and Hottentot peoples remained in relatively undisputed possession of this country (*cf.* Tooke, 1905).

The Bantu tribes present a frankly negroid stock whose birthplace is supposed to have been somewhere in central or even western Africa well north of the equator. By some, too, the Bushman and Hottentot peoples are regarded as being of negroid character and as indistinguishable anthropologically from one another (*cf.* Peringuey and Shrubsall, 1911). There are, however, anatomical, ethnological, and philological reasons for regarding the Hottentot as more closely affiliated with the Brown or Mediterranean race which peopled northern Africa and southern Europe in neolithic times, and for believing that he is a more recent arrival than the Bushman.

The Bushman is then a very ancient inhabitant of southern Africa, and certain of the Bushman peoples, such as the Koranas (Broom, 1923), present anatomical features of a low forehead, beetling eyebrows, and a small brain capacity which link them to very primitive peoples such as the modern Australian aboriginal and to pre-historic types of man like Neanderthal man.

Primitive as he undoubtedly is, the Bushman was not the earliest human visitant of South Africa. In 1913 (Haughton) the skull of a man of greater stature and far greater brain capacity was found at Boskop near Potchefstroom in the Transvaal. Remains of a similar type were found in 1923 (Dart) along the south-eastern coast in a rock shelter under cover of Strandlooper remains (Fitzsimons). Hence the Boskop race anteceded the Bushman race, of which the Strandlooper was an early representative. To this Boskop race is perhaps to be attributed the palaeolithic implements which are so common throughout South Africa, and which differ so markedly from the neolithic implements which characterize the culture of Strandlooper, Bushman, and Hottentot.

But the discovery in 1921 (Smith-Woodward) of a human skull in the Broken Hill Mine of northern Rhodesia has shown conclusively that the story of man in southern Africa has a page more remote than that represented by the Boskop race. Rhodesian man was a type more ape-like than any that has been discovered in Africa; only two representatives of the human stock have been discovered elsewhere in the world (Pithecanthropus, the ape-man of Java, and Piltdown man, from Sussex) which are more primitive.

Darwin believed that the home of man's evolution was Africa.† With the development of anthropological research in this country his contention may yet be proved. In any case, many of the gaps in the story of man in southern Africa will undoubtedly be filled. Broadly the evidence available at present indicates that the Rhodesian race were the most primitive and possibly the earliest comers. They were replaced, possibly from the north, by a very superior and advanced type—the Boskop race. This race succumbed to the Bushman with his smaller form but more deadly arts of warfare. These had their possession questioned in turn by Hottentot and by Bantu. Meantime, in relatively historic times, other northern Semitic invaders have added to the monumental remains and the ethnological confusion which confronts the modern student of mankind at this end of the continent.

---

*By Raymond A. Dart (Professor of Anatomy, University of the Witwatersrand).

†Since this account was penned the discovery of *Australopithecus africanus* (the man-ape of southern Africa) at Taung, in Bechuanaland, has lent confirmation to the view of Darwin, by revealing in our continent a pre-human stock much more primitive than *Pithecanthropus*.—R. A. D.

2. **The Cultural Aspect.***—As there are several different racial stocks intermingled in the peoples of the Union, so there are elements of different basic culture types to be found among them. According to the most recent researches of ethnologists, there are two types of culture which can be regarded as essentially African, whatever their ultimate origin may have been, viz., the *Hamitic pastoral culture* and the *Negro hoe culture*. Besides these, there are cultures due to migrations of "high" culture types into the regions where these primitive types prevailed, resulting in modifications of culture. Typical of the *Hamitic* culture are the round beehive huts, generally constructed of skins or grass over a framework of wattles, or supple poles; the absence of any kind of bed in the hut, the skin or kaross forming a mantle by day and a bed-covering by night; where grains are cultivated, the underground storehouse for grains, often in the cattle kraal; garments and shields made of skins; bellows made of skins; and, in general, a culture with pastoral characters dominant. Typical of the *Negro* culture are rectangular huts with gable roofs, or cylindrical huts with conical roofs, and a tendency to build on piles. Thus, there is a bed and it is raised above the ground; the storehouse is raised up on piles, and in many cases the hut itself is on piles. The dress is often of bark cloth, not of skins; the shields are of wood or wattle, not of skin; and the dominant interest is grain cultivation, not pastoral pursuits. The tendency of the pastoral culture is to nomadism, that of the hoe culture to settled habitation and continuous occupation of the same land. The former is warlike, the latter peaceful and docile.

In the Union we have a mixture in varying degrees of these culture types, with many other influences which have come in at later times. Thus, our coastal Bantu have the Hamitic culture elements predominating, in hut, dress, grain receptacle, and so on. The central Bantu group in the Union, on the other hand, shows the predominating influence of the Negro culture in the cylindrical huts and the raised corn receptacles, but the dress, the shields, the bellows, etc., are of the Hamitic type. Among the western Bantu we find the Negro type predominating among the Ovampo, the Hamitic type among the Herero. When we come to study the cultures of these peoples more intimately, we find that there are still further differentiations due to the intermingling of peoples fundamentally of one culture type, who have been separated long enough to develop along somewhat different lines before joining together to form one people again. Thus we find among Bantu peoples at least two distinct sets of terms for the *high god*, in the sense of the creator, the set in the east consisting of various forms of the word *Mulungu*, while in the west some form of the word *Nzambe* is used. Now, among our western Bantu, the Herero and the Ovampo, we find both sets of words used, and there are many other signs of intermixture in the organization of these peoples. The survey, then, of culture traits, so far as it has gone, shows an amazing degree of culture-contact to have taken place, but we are very far from being in the happy position of the Americans, who through an exceedingly thorough survey of the culture of American Indian tribes, are to-day able to tell exactly the spread of all culture traits, with their areas of distribution, as well as their probable centre of dispersal and origination.

A thorough analysis of the tribes in the Union in this way is very much to be desired, for it would help very considerably in the unravelling of the elements which have gone to the make-up of the cultures of our Bantu peoples. However, quite apart from these ethnological analyses, there is the question of the actual culture of the Bantu peoples as it has been welded into a living whole, and here again we find a great richness in the culture types of the Union, though we have as yet little more than a superficial insight into any of them.

We have the type of the primitive nomadic hunter represented by two quite different peoples, the Bushman and the Bergdama; the type of nomadic pastoralist by two different people again, the Bantu Herero and the Hottentot. For the rest, we have Bantu peoples who are both pastoralists and hoe cultivators, and who present an amazing variety of cultures on the basis of these two underlying systems of sustenance.

The world over it has been found that primitive peoples attribute inherent powers to the things which are of great importance and value in the social life. That is to say, the ritual, or ceremonial and religious life, will very largely be concerned just with these things of essential social value. Among hunting peoples, it will be the animals on which they depend so largely for food which are the objects of ritual; among pastoral peoples, the cattle form the centre not only of the social life but also of the ceremonial life; while among cultivators, it is the soil, the seed time, and the harvest which form the objects of the ceremonial. Where we have all three interests in the lives of the people, as among so many of our Bantu, we shall find traces of all three types of ritual attitude.

The Bushmen, who once were to be found all over the Union, are to-day reduced to living in the most unfavourable areas. Little bands of them are living in the extreme north of the South West Africa territory, while all others in the Union are in the Kalahari

---

* By Mrs. R. F. A. Hoernle, B.A. (*née* A. W. Tucker) (Research Fellow and Lecturer in Ethnology, University of the Witwatersrand).

Desert. Wherever the Bushmen have been observed they have been found to have but the simplest organization. They are divided into little hunting bands, each of which owns a definite hunting territory over which it wanders and out of which it is dangerous to go except with the permission of the neighbouring band. Within the hunting territory members of the band are free to go where they like, and the organization of the band is of the loosest. There is no chief, though a skilled hunter and the older, more experienced, men in general, naturally have a great influence in the councils of the people. The only other social structure of any importance, besides the hunting band, is the family, consisting of a man and his wife, or wives, with their dependent children. Hunting peoples with such an extremely simple organization are rare. Hence, it is of more than usual importance that we should know all that we possibly can about the Bushmen. Further, if the hypothesis put forward by Sollas and others should prove correct, that we have in our Bushmen the last remnants of a people which once inhabited southern Europe and produced the wonderful cave-paintings there, it would be a great reproach to the people of the Union that they had neglected the opportunity of learning all there was possibly to be learnt concerning the Bushmen.

We do not know the exact structure of the family among the Bushmen, nor the rights and duties of relatives towards one another, so that our knowledge of the moral system of the Bushmen is negligible. Of their technology, their weapons, and implements we have pretty full accounts, and we have a large collection of their myths together with the native texts. These texts, which are of the utmost value for philology, are unfortunately for the most part only tantalizing to the social anthropologist. They are largely a sealed book for lack of the intimate knowledge of the outlook of these people on the world, which would alone enable us to understand the full import of what is barely indicated in the word form of the myths. From references in their legends and myths we know that the Bushmen had a careful ritual connected with the animals, but we do not know in any detail what that ritual was or is.

"We show respect to the game, because we wish that the game may die. For the game would not die if we did not show respect to it," is what one old man told Dr. Bleek, to whom and to whose family we are indebted chiefly for the preservation of the myths. In order for man to remain supreme over the animals, it is necessary that he keep the powers of the universe on his side, and this he can do only by acting in the most careful manner, as this was established by the ancestors of old. It is just this order, established by the ancestors, that we wish to know about. Myths in general serve to express certain ways of thinking and feeling about the society and its relation to the world of nature, and thereby to maintain these ways of thought and feeling, and pass them on to succeeding generations. Only by an intimate study of the ways and habits of the fauna known to the Bushmen, and of the way in which the Bushmen link these habits up with other observed phenomena, e.g. the weather, can we ever understand the real meaning of the myths. Whether it is still possible for someone to gain this insight by living the life of the Bushmen, as they lead it in the Kalahari Desert, or in Angola, is hard to say, but the attempt is well worth making.

As for the Bushman paintings, which have always been the chief object of interest in connection with these people, they belong now to the realm of archaeology, for it has proved impossible so far to find any living people who could interpret them to us. They remain as a very valuable record of an art that seems to be lost, and they have proved, and will in the future probably prove still further, a most important link in the chain of evidence connecting our primitive African people with the palaeolithic people of Europe.

The second purely hunting people we have in the Union are the Bergdama, who have attracted far less attention than the Bushmen. According to Vedder, they are lower in the scale of culture than any Bushman people. Formerly inhabiting the whole of the northern part of South West Africa, or Damaraland, as it is called, they are now scattered through the length and breadth of South West Africa, a totally disrupted people; or they are to be sought in the fastnesses of the Erongo and Brandberg mountains and other little known parts of the Namib area of South West Africa.

We owe practically all we know of the culture of this people to the missionary H. Vedder, who has recently published in two volumes an account of them together with texts of their legends and myths. According to him, there are probably two strata of these peoples, as it were, the more primitive stratum being composed of people who have goats on which they can depend for a part of their sustenance. The Bergdama are interesting because they seem to be the most primitive of the Negro peoples known to us, apart from the Congo pigmies, with whom, it is suggested by Vedder, they may have affiliations. What their original language was is not known, for they have been so long enslaved by the Hottentots that they have completely adopted the Hottentot language and, at least superficially, the Hottentot social organization. Yet in ceremonial their lives seem to have been but little influenced by the Hottentots, and we find among them what seems to be a very important feature of many Bantu cultures, the sacred fire round which the whole life of the society centres.

The Bergdama are simply organized. Each little local group is entirely independent, and consists of a patriarchal family, together with any relatives who may put themselves under the protection of the head of the group, and a certain number of dependent people,

hardly to be called slaves, but families who do not feel capable of founding a kraal or village of their own, and prefer to have their lives organized by a strong head of a family. This little group centres its life round a sacred fire which must never be allowed to go out, but which must be guarded day and night by the chief wife of the patriarch. Day by day, when the members of the society go out to seek for food, the head of the kraal and the old men sit guarding the fire, and as long as that is aglow and respected by all, the hunters and collectors will find food for the day. All game must be laid by the sacred fire, and certain portions of it must be eaten ceremonially by the elders of the kraal. Each kind of berry and root, as it ripens in the spring or autumn, must be brought to the sacred fire before it can be eaten by the people; all good, all evil, hangs upon the guarding of the fire from all impurities, which come from all breaches in the regulations as laid down in the traditions of the tribe.

The researches of Vedder are a most valuable addition to our knowledge of African peoples. What is needed now is that some student should go among the quite wild Bergdama of the Namib, where it might still be possible to find some traces of their original language, and some remnants of their culture uninfluenced by that of the Hottentots.

The two purely pastoral peoples of South Africa, the Hottentots and the Herero, are distinctly more closely organized than either the Bergdama or the Bushmen. Among the Hottentots, in addition to the family, we have the organization of patrilineal sibs, that is, as ocial structure, which holds together all families claiming a common descent from some remote ancestor in the male line. These sibs are named after the ancestor, and marriage within the sib is strictly forbidden. This patrilineal sib structure is very characteristic of pastoral peoples, and both among the Herero and the Hottentots it is distinctly stronger than the tribe, which consists of a rather loose aggregation of several sibs, with the chieftainship hereditary in one of them. A very good index of the power of the central authority among African peoples is to be found in the extent to which it is able to control the vendetta, that is, the carrying out of blood vengeance, when homicide has been committed by a member of one sib on the member of another sib in the tribe. In the most completely developed tribes culpable homicide is a crime, punished by the central authority. In the least developed tribes, the sib claims the sole right of revenge for the loss of a member. Now, among both the Herero and Hottentots, we find the central authority intervening in the dispute in the attempt to make the injured sib accept compensation in the form of cattle for its loss, but among both peoples it has remained legitimate for the injured party to refuse to accept this compensation and insist on blood vengeance.

Unfortunately, the Hottentot culture is in the last stages of decay, so that it is hardly possible to recover more of it than we have. We find among them a developed ritual connected with their cattle, which are, as they put it, "the grass which God gave them to eat." On the other hand, instead of the strongly-developed ancestral worship which we find among all the Bantu of the Union, we get the worship of Heroes derived partly from animistic beliefs, partly from the personification of the natural forces producing rain. We find, too, that the communal meal is the great means of attaining social solidarity; of curing a sick person by aggregating him to the group of those who have had the disease and recovered; of aggregating young men and women to the life of full members of the tribe; of bestowing on a young mother the solidarity of the group of mothers with strong and healthy children; of welcoming a widow, or widower, into the group of the widowed, and so giving them a new place in the society as a whole. Further, if the well-being of humans is to be attained through communion by means of a communal meal, no less does the well-being of the stock depend on healthy conditions being maintained in the community. Any breach with the traditions of the past, any toleration of slackness in carrying out the regulations established for all contingencies in the life of the people, is bound to affect the stock adversely. Great care, then, is taken to keep all pollution from the cattle kraal, and the stock is included in any lustrations and other purification ceremonies that take place.

The Herero deserves to have the most thorough investigation that can be made of them by a competent social anthropologist. So far as we know, there is no sign of their ever having practised agriculture, which is a very rare condition among Bantu peoples. Further, we find among them more persistent traces of a former condition of totemism than among our other Bantu peoples; and we find clear signs of two distinct influences in the structure of their culture as a whole. Totemism in its typical form is found only among hunting peoples. Indeed, the most fruitful hypothesis regarding totemism is that of Prof. A. R. Brown, viz. that it is the result of the development of the sib among hunting peoples. It is extremely likely that the Bantu peoples were all hunters for a very long time before they became cultivators or herders, and before their contact with Europeans hunting always occupied a large place in their lives. However, they have been cultivators, or herders, or both, for so long, that their original totemic condition has been very much modified. In fact, in some cases there are no traces of totemism to be found. Among the Herero, however, we have totems chiefly of different kinds of wild animals and natural phenomena. Now, in totemic societies, membership of the sib may be inherited either through the mother, or through the father, seldom through both. Among the Herero, we find that a person belongs both to the *eanda* of his mother and the *oruzo* of his father and has different affiliations

in both cases. The religious life is almost entirely connected with the patrilineal sibs, and is a developed form of ancestor worship. Here, again, we find the sacred fire serving as altar. At the chief's kraal the ancestors of the chief are worshipped and represent the ancestors of the whole tribe. In addition, we get the sacred fire in the kraal of each head of a family lighted, in the first instance, from that of the chief. None of these sacred fires must ever be allowed to go out. To this fire the women, who do the milking among these people, bring the milk each night and morning to have it blessed by the kraal head and the ancestors. In the Kaokoveld there are still to be found Herero people practically untouched by all the turmoil and stress of the Herero wars, and it would be of the utmost value if detailed information could be gained from them. The sacred fig tree which plays so great a part among the Bantu of East Africa is of significance, too, among the Herero.

We come now to various Bantu tribes which practise both cultivation and herding. The Ovampo in the west are still divided into totemic sibs which are inherited both through the mother and through the father, so that we get a dual organization of the people. The Bantu of the central area, the Bechuana and Basuto groups, have remains of a tribal totemism; that is, each independent section of the people, which may at one time have represented a sib, has a *siboko*, a praise name, taken from some animal or some natural phenomenon. In the old days there was a definite ritual connected with the specie of animal so used. However, nowadays the main division of the people is into patrilineal sibs, and possesion of a common *siboko* is no bar to marriage, as would be the case in true totemic societies. In the coastal area all traces of totemism, if it was ever present, have disappeared, and we find the patriarchal family strongly developed in a tribal structure also well organized. Among the Ovampo blood revenge is still practised, but among the central and coastal Bantu of the Union the tribal authority is supreme. Here we find that all persons belong to the chief. Any injury to them is, therefore, an injury to him, and compensation for death or injury must be paid to him. Here we get the first signs of a central authority concerning itself with crimes in our sense of the word.

Our knowledge of the inheritance system of our Bantu peoples is pretty thorough, and also of their laws so far as these have been studied by magistrates and native commissioners, but we have a very inadequate idea of the kinship systems and kinship customs, of all these peoples and totally inadequate accounts of their ceremonial. It is most urgent that a thorough investigation should be made of the Zulu and other coastal tribes. For instance, if we are really ever to understand the full import of their manners and customs, it is above all essential that we should know in detail the full meaning of their pastoral life, and this as yet we do not know. We know that among the Zulus and among the Pondo drinking the milk from the cows of another sib is equivalent to pledging blood-brotherhood with that sib, so that henceforth marriage into it is forbidden. This simple fact suggests innumerable questions which we are unable to answer. If the milk of the cows of a herd is like the blood of the sib, which is sacred to its members, all the customs connected with *lobola*, with compensation for homicide and many others, take on a new significance, and it should be recognized that cattle are not in any true sense a medium of exchange, but in part a symbol of wealth, in part actually one with the society to which they belong, linked up with its good and evil fortune. They are more than mere possessions or property; they are, at the very least, the medium through which man communes with his gods. Contact with our ideas has changed a great deal of the native outlook on life, and the rigid fixing of the *lobola*, together with the substitution of a money payment, has introduced into this custom ideas which were originally foreign to it, so far as we can tell from our limited knowledge. Again, we have practically no detailed information concerning the ceremonial life of the women, especially in connection with the cultivation of the fields which is their particular province.

A real scientific study of the culture of one or more of our native peoples is the great need at the present time.

3. **The Linguistic Aspect.***—Dealing with the natives of South Africa linguistically, we find that there are three types of language represented, the *isolating*, the *inflexional*, and the *agglutinating-inflexional*.

In regular *isolating* languages, all words are monosyllables, and undergo no modification in form to express person, gender, number, case, mood, or tense, all syntactical relations being shown by word-order in the sentence. In these languages intonation or pitch takes the place of syllabic stress. The isolating type of language is represented in Africa by the extensive Sudanian group of languages, spoken by the negroes of West Africa and the Sudan; but in South Africa the languages of the Bushmen, though vastly different in most respects from the Sudanian group, have distinct features of the isolating type. Bushmen-speaking peoples are almost extinct to-day, but remnants speaking the ! Kung language are still to be found in the north of South West Africa, and other scattered peoples are found in the Kalahari Desert.

Th. Hahn, in his introduction to "Tsuni goam," mentions seven distinct Bushman languages. Dr. W. H. I. Bleek, in his texts, seems to indicate two main languages, that of the Cape Province and that of the ! Kung, the former having at least four dialects. Dr. Passarge thinks that there are two main stocks of Bushmen linguistically, whose respective areas meet about mid-Kalahari. Members of these stocks, he states, cannot understand each other; and there are many sub-divisions within these groups. Herr Vedder, a German missionary, has written a small treatise on the ! Kung language in German, and we have numerous texts published by Drs. W. H. I. Bleek and Lucy Lloyd. From these we are able to gauge, to a certain extent, the nature of these fast-dying languages.

Unlike Hottentot the Bushman languages are genderless. If they were ever sex-denoting they have now lost those signs of sex-gender which are so clearly seen in Hottentot. Unlike the Sudanian languages, which are of the regular isolating type, the roots of many Bushman words are apparently polysyllabic, though, as Theal points out, it is possible that upon very close analysis some of those polysyllables might prove to be really composites.

The striking feature of the Bushman languages, however, is the strangeness of the phonetics to the European ear. "Bushman" abounds in click sounds, nasals, and ejectives (sounds produced with simultaneous closure of the glottis). The most feasible theory is that the clicks originated with the Bushmen or their ancestors, and that it was from them that the Hottentots derived the clicks they use, and in turn themselves influenced those of the Bantu peoples who employ clicks. In the two main types of "Bushman" no less than six different positional types of clicks are used, each of which may be pronounced unvoiced, voiced, or nasal, and in various combinations with other consonants. The Hottentots employ only four positional types of clicks, the Zulu-Xosa section of the Bantu only three, and the Sutos only two in an extremely limited manner.

In *inflexional* languages the meaning of words is modified by the use of prefixes or suffixes, which cannot be recognized as separate words, and also by internal change of vowel. Inflexional languages alone recognize grammatically the distinction between masculine and feminine, i.e. they have grammatical sex-gender. In South Africa this type of language is represented by the languages of the Hottentots. The Hottentot languages have little or no grammatical affinity to those of the Bushman, though insufficient study makes any definite conclusions on this matter impossible. As has already been noticed, "Hottentot" owes a great deal to "Bushman" in its phonetics, other phenomena, besides the clicks, being traceable to past Bushman intermarriage and contact-influence. It is further noticed that "Bushman" and "Hottentot" have borrowed many words one from the other, and hence there are many similarities of vocabulary. But Hottentot has its grammatical affinities with the Hamitic inflexional languages of North Africa, structural resemblances even to Ancient Egyptian being very marked.

The philologist Hahn enumerated the names of nearly a dozen Hottentot or Khoikhoi tribes, but in all probability some were merely sub-divisions of Nama or ! Kora. Amongst them he names the Griqua, who are a bastard race. However, four Hottentot languages have been differentiated, though of these two are quite extinct, and little or nothing may now be heard of a third. The languages are these: (1) Nama, still spoken by a number of people in the South West African territory, and by the Berg Demara, a Bantu people who were subjugated by the Nama; (2) ! Kora, now, as far as we know, extinct, which used to be spoken between the Vaal and the Caledon Rivers, and along the Orange towards Namaqualand; (3) the original Cape Hottentot, now quite extinct; and (4) ! Gona of the Eastern Province, also extinct. Regarding the last two languages, little more than the names is known apart from a few words contained in the works of early travellers; but a missionary, named Wuras, has written both vocabulary and grammatical works concerning the ! Kora. In Nama, besides a translation of the New Testament and parts of the Old Testament, there are several grammatical and other works available, and even a monthly periodical is published at Keetmanshoop by the Rhenish mission.

Without going into any detail, we might outline the main characteristics of the Nama Hottentot language as follows: The possession of (1) three grammatical sex-genders,

* By C. M. Doke, M.A. (Senior Lecturer in Bantu Studies, University of the Witwatersrand).

masculine, feminine, and common; (2) three numbers, singular, dual, and plural; (3) three cases of nouns and pronouns, nominative, accusative, and vocative; (4) the decimal system of numeration; (5) suffix formation in conjugating verbs; (6) a wealth of suffixal verbal derivatives, very reminiscent of those of Bantu; (7) a wealth of pronominal forms; (8) a wide use of abstract nouns; and (9) a monosyllabic tendency.

The third and most important language family represented in South Africa is the Bantu, which might be described as *agglutinating tending to inflexional*. In real agglutinating languages, the formative elements, whether prefixal or suffixal, can always be recognized as independent words detachable from the root. In Bantu this feature is tending to become inflexional, the formative elements fast losing their distinctive meanings. The main peculiarities are (1) the system of the alliterative concord, with a division of nouns into classes according to the form of the prefix; (2) the absence of grammatical sex-gender; (3) the high development of the verb tenses and the wealth of derivative forms; (4) the wide use of onomatopoeic radicals as a distinct grammatical part of speech; and (5) the importance of "tone" as a grammatical and semantic feature. From the phonetic point of view it is noteworthy that each syllable in Bantu languages ends in a vowel or syllabic voiced continuant, and that the vowel system is remarkably simple, there being three basic vowels, *a*, *i*, and *u*, while mid-forward and mid-back vowels (*e* and *o*) each have two varieties making generally seven different types of vowels in a Bantu language.

The most important Bantu languages indigenous to the Union are:—

(1) The Zulu-Xosa group, along the south-east coast from Zululand, through Natal, the Transkei, and Kaffraria, comprising, along with the many sub dialects, Xosa, Zulu, and Swazi. It is in the group of the Bantu languages that the influence of the Bushman-Hottentot clicks is most noticeable.

(2) The Chwana-Suto group in Bechuanaland, the Transvaal, the Orange Free State, and Basutoland, comprising the Chwana dialects of Mangwato, Tlaping, Rolong, and others, Venda in the Northern Transvaal, Pedi or Northern Suto, and the Suto proper of Basutoland. In the last-named only is the Bushman-Hottentot click influence noticed, and that to only a slight extent.

(3) The Thonga language in the Eastern Transvaal, with its ally Gwamba to the north. Thonga is the principal language of a group spoken in Moçambique, principally around Delagoa Bay.

(4) The Bantu languages of the South West African territory of which the principal is Herero, with Ndonga in the extreme north.

There is a fairly wide range of literature in and concerning these Bantu languages, especially in Xosa, Zulu, Suto, Chwana, Thonga (or Tshangaan as it is called), and Herero, and in the first three of these a native literature is growing, and native newspapers are being published. There is, however, a dearth of *real scientific* work in grammars or dictionaries; and the study of the phonetics of these languages is lamentably deficient. Nevertheless, the names of several pioneer missionaries are connected with most valuable work in the past. For Xosa there are Boyce (1834), Ayliff (1846), Appleyard (1850), Davis (1872), and more recently Kropf, Stewart, and McLaren; for Zulu, Dohne (1857), Grout (1859), Colenso (1865), Callaway (1868), and more recently Roberts and Bryant; for Chwana, Archbell (1837), Brown (1876), Crisp (1880), and more recently Wookey; for Suto, Casalis (1841), Kruger (1878), Mabille and Jacottet (1888), and Dieterlen; for Thonga, in recent years, Junod and Chatelain; for Herero, Hahn (1857), Kolbe (1883), and Brinckner (1886). In addition to this mass of missionary work in grammar, dictionary, and translation, the work of Professor Meinhof in Germany, and such colleagues of his as Endemann and Irle, must be mentioned.

The great work of Dr. Bleek, the eminent philologist, "A Comparative Grammar of the South African Languages," must not be overlooked. Dr. Bleek, who unfortunately died in 1875, when only a small portion of his work had been completed, was one of the first to recognize the essential oneness of these languages. It was he who first used the term "Bantu" to designate them, and his "Comparative Grammar" was the first attempt at a serious comparison of their common characteristics. A real comparative grammar of the Bantu languages remains to be written; but before that can be done with any measure of success, it is evident that the individual languages must be reduced to a common phonetic basis, and a common and more scientific grammatical basis. Practically all the grammatical work hitherto accomplished has been moulded on European or classical grammar lines, and it remains for a new, a true Bantu, view of grammar to be applied, before many baffling mysteries can be solved.

CHAPTER XXVII.

THE TERRITORY OF SOUTH WEST AFRICA.

§ 1. History.

1. **Pioneer Work by Cape Government.**—In the year 1814 the British Government (of the Cape of Good Hope) sent a German missionary, Von Schmelen, to carry on mission work amongst the Hottentots living across the Orange River in Great Namaqualand, as the southern portion of the territory was then called. This man married a Hottentot girl and settled down near Okahandja as an influential member of the tribe of Afrikander Hottentots under Jager Afrikaner.

2. **The Rhenish Missions.**—When once Von Schmelen was fairly established he seems to have forgotten all about the Cape Government, and to have placed himself in communication with Berlin. His reports upon the country, its inhabitants, and possibilities, had the result of attracting other missionaries to South West Africa; and eventually, about the year 1840, the *Rhenish Missionary Society* of Berlin began to take an active interest in the new field for missionary labour and enterprise; so much so, that in 1869 thriving mission stations had been established at nearly every important station in Great Namaqualand and Damaraland in the north. In conjunction with each mission station it was found necessary to establish a general store from the profits of which the missionary and his family could live, and from which natives could be supplied with clothing, arms, and ammunition, in exchange for cattle, sheep, and the products of the chase. As the field of missionary labour was extended by the founding of new mission stations, so also the field for mercantile achievement expanded. Cape Colonial traders then for the first time appeared upon the scene with wagons laden with goods, which were bartered to the natives for stock and produce. This competition seriously affected the commercial operations of the missionaries, who eventually arranged for the formation of a limited liability company, which was floated in Germany in 1873 for the purpose of trading in the mission fields of the Rhenish Missionary Society. The society undertook to give the company all the assistance and support possible, and in return therefor was to receive half the net profits. The main object of the company was to develop the cattle business and open up an export trade with Europe. Owing, however, to the inevitable transport difficulties, the incapacity and dishonesty of those in charge of the management, and the outbreak of a Herero-Hottentot war in 1880, the company became hopelessly insolvent, and went into liquidation.

3. **British Mission of 1876 and Annexation of Walvis Bay.**—In the meantime an event of importance had taken place. During the year 1876 a British Commissioner, Mr. C. W. Palgrave, entered the country with a view to ascertaining the wishes of the native chiefs in regard to control by Great Britain. He was well received by the Hereros, who asked him "to send some one to rule over us and be the head of our country." The Bastards of Rehoboth and several Hottentot tribes also asked for British protection and control. In his report to the Cape Governor, Mr. Palgrave recommended the annexation, as British territory, of the whole coast line of Great Namaqualand and Damaraland; but the British Government in 1878 only annexed Walvis Bay and a few square miles of desert sand in its vicinity. Of this failure German enterprise was not slow to take advantage, and the next important step to mark the extension of German influence, and the acquisition of that which Great Britain had definitely discarded as worthless, is represented by the activities of Adolph Luderitz, a merchant of Bremen, who arrived in 1882.

4. **German Influence and Annexation.**—It did not take Luderitz long to discover that, after Walvis Bay, the bay known as Angra Pequena (now known as Luderitz) was the best port on the coast line between the Orange and Kunene Rivers, and he accordingly purchased from the Hottentot Chief Joseph Fredericks, of Bethany, a strip of territory situated between the 26th degree of southern latitude and the Orange River, bounded on the

west by the sea and on the east by a line running twenty miles inland from north to south. On the 24th April, 1884, Prince Bismarck formally sanctioned the hoisting of the German flag at Angra Pequena, and placed Luderitz and his acquisition under the protection of the German Empire. Encouraged by this recognition Luderitz purchased from the captain of the Topnaar Hottentots, who lived near Walvis Bay, the remainder of the coast belt, extending to Cape Frio. He left for Germany, and in 1885 succeeded in floating a company called the *German Colonial Company for South West Africa*, with a capital of M.300,000 (£15,000); and in October of that year the Government Controller of that Company, Dr. Goering, arrived at Luderitz. In the year 1889 the German Government sent Captain von François with a detachment of soldiers to protect German interests, and in July, 1890, the country was formally annexed by Germany.

5. **Later German Colonization.**—A census of the white population taken in 1903 showed a total of 4,640 individuals, and the native rebellion of 1904, besides necessitating the introduction of 1,114 officers and 18,286 non-commissioned officers and men, had the result of bringing the country and its possibilities to the notice of German investors; whilst the discovery of diamonds at Luderitz in 1908 supplied a further stimulus to immigration. Many of the soldiers, upon completion of the campaign, settled upon farms; and merchants who had made money during that time applied themselves to the development of pastoral pursuits, an example which in 1909 was followed by the Government in the establishment of horse, cattle, and sheep breeding centres at Nauchas, Neudamm, and other places. Prior to 1904 the only railway in existence was a narrow gauge line from Swakopmund to Windhoek; but the exigencies of the campaign above described necessitated the construction of lines from Luderitz to Keetmanshoop, Karibib to Tsumeb, and Windhoek to Keetmanshoop, though these lines were not all completed at the termination of the rebellion in 1906. From that time the progress of the country was rapid. Commerce transformed Luderitz and Swakopmund from mere landing stages into flourishing seaports, whilst the inland trade resulted in the establishment of towns and villages throughout the territory. The Government of the country passed from the military to the civil officials, for whom excellent quarters and offices were erected.

Farms on easy terms of payment were granted to settlers; money was advanced them by a Land Bank supported by Government, and water-boring facilities were provided. Such was the position at the outbreak of the European war; and, although a great deal still remains to be done, there can be no doubt that the ground work for which the Germans were responsible was thorough.

6. **British Campaign and Conquest by General Botha.**—Windhoek, the capital town of the territory, was occupied on the 12th May, 1915, and on the 9th of July of the same year the German forces surrendered at Korab, which is situated on the narrow-gauge railway near Otavi junction.

Details of the campaign are given in the third issue of the *Year Book*.

§ 2. Physical Characteristics.

1. **Area and Boundaries.**—The territory of South West Africa (including the Caprivi Zipfel) embraces an area of 322,393 square miles (83,500,000 hectares), and excluding the Caprivi Zipfel, 311,820 square miles (80,759,563 hectares). It lies between latitudes 17° south and 28° 57′ south, the Atlantic Ocean, and longitude 21° east; so that, from practically the centre of the Rehoboth District northwards, it falls within the tropics, and from there southwards within the South Temperate Zone. As the Caprivi Zipfel for administration purposes has been transferred to the Protectorate of British Bechuanaland and Walvis Bay, which is 374 square miles in extent, is administered by the Administration of South West Africa; the area of the territory as now administered by the Administration is 312,194 square miles (80,856,427 hectares).

The boundaries of the territory are—

North....Angola, which for a considerable distance is separated from South West Africa by the Kunene and Okawango Rivers.

East.....The Protectorate of British Bechuanaland and the Province of the Cape of Good Hope of the Union of South Africa.

South....The Orange River, which is also the boundary of the Province of the Cape of Good Hope of the Union of South Africa.

West.....The Atlantic Ocean.

2. **Angola–South West Africa Boundary.**—An agreement for the settlement of the dispute concerning that portion of the Angola–South West Africa boundary, lying between the Kunene and the Okawango Rivers, was concluded in June, 1926. The plenipotentiaries were Dr. Augusto de Vasconcellos, Vice-Admiral Ernesto de Vasconcellos, and Col. Carlos

Roma Machado, representing the Republic of Portugal, and the Hon. Justice Jacob de Villiers (Judge of Appeal), the Hon. G. R. Hofmeyr (ex-Administrator of South West Africa), and Mr. Reenen Jacob van Reenen, representing the Mandatory Power.

3. **Physical Features.**—(i) *Formation.*—South West Africa is practically one large plateau which forms a portion of the main South African plateau of its great interior basin, the Kalahari. It has a mean average height of approximately 3,600 feet above sea level, and slopes gradually, especially on the eastern portion of the territory, from 2,500 feet in the south to 4,800 feet in the north, while it is interspersed with small mountain ranges, of which the Moltkeblick rises up as high as 7,886 feet above sea level. The Brandberg, which is near the coast and is the highest of these, has an elevation of 8,277 feet. The plateau or interior upland is separated from the sea by a practically rainless desert commonly called the Namib, which rises rapidly, but evenly, from the sea to the plateau, having an average width of 100 kilometres (62 miles), and attaining its greatest width towards the south, and its narrowest towards the north, the annual rainfall there being less than one inch. A good deal of the plateau in the south may be classed as semi-desert, as the average annual rainfall is less than 10 inches, but in the north there is a marked improvement, the average rainfall in parts being over 20 inches.

The edge of the South African Plateau is well defined in the north and south of South West Africa by broken ranges of mountains like the Kaokoveld and Aus-Kubub Mountains (Huib Hochbene), but in the centre there is no defined escarpment. The plateau attains its greatest average elevation around Windhoek, which lies between the Khomas Hochlands and the Auas Mountains. From there, isolated eminences and ranges superimposed on the main plateau extend in a northerly direction to the Kaokoveld Mountains. To the south, the Highlands are succeeded at some little distance by the plateau and the table-topped mountains of Great Namaqualand; eastward and north-east of these elevated tracts, the upland assumes a very level character, composed mostly of sand dune formation merging eventually everywhere into the sandveld of the Kalahari.

(ii) *Mountains.*—The most mountainous section is the Windhoek district, in which are—

(1) The Khomas Hochland, a very rugged lofty tableland, with a mean altitude of 6,000 feet, rising up in places to 6,700 feet above sea level;

(2) Rugged ranges north-east of Windhoek, of which the principal are the Onyati Mountains (7,198 feet); and

(3) To the south and south-east, the Auas Mountains, having a mean average elevation of approximately 6,700 feet, attaining their greatest altitude in the Moltkeblick Peak (7,886 feet). In this section, the Kuiseb, the Fish, the Elephant, the Nosob, the Swakop, and the Auob rivers have their source, and this may practically be termed the watershed of South West Africa.

With the exception of the Kaokoveld mountains, which form the edge of the plateau, the rest of the mountains are broken ranges and isolated eminences rising out of the Great Plateau. Among these we find the Amatako (7,270 feet), Brandberg (8,277 feet), Erongo (7,044 feet), Chuos (5,081 feet), Naukluft (6,266 feet), Weissrand (3,770 feet), Tsaris (5,749 feet), Schwarzrand (4,399 feet), Tiras (5,930 feet), Huib Hochbene (Aus Kubub), Klein Karas (4,729 feet), and Gross Karas (6,168 feet).

(iii) *Rivers.*—With the exception of the boundary rivers, the Kunene, Okawango, and Orange Rivers, and the Kwandi in the Caprivi Zipfel, there are no perennial streams. There are, however, dry sandy river beds, which flow after heavy rains, but except in very wet seasons, few of these flow for any considerable distance, such as the Swakop, the Kuiseb, and the Omaruru. These river beds have the appearance of having been blocked up by loose sand, under which the water percolates and eventually reaches the sea. By sinking shallow wells in them plentiful supplies of fresh water are obtained; a good illustration of this is at Rooibank, near the mouth of the Kuiseb, and at Goanikontes, near the mouth of the Swakop.

The principal of these sandy rivers are: The White Nosob, the Black Nosob, the Vereinigte Nosob, the Auob, and the Elephant, all of which flow east and south-east; the Fish, which flows south; and the Kuiseb, the Swakop, the Omaruru, and the Ugab, which flow west.

(iv) *Ocean Currents.*—The coast is swept by the cold Benguella current, which originates in the Antarctic Ocean and flows along the western coast of South Africa as far as the mouth of the Congo. There can be no doubt that the arid character of the Namib is due primarily to the influence of this current.

(v) *Pans.*—Very characteristic of the northern and eastern section of the territory are the peculiar shallow depressions without any outlet, commonly known as *pans*, which range in diameter up to a couple of miles. They can be classified according to the water contained in them as fresh water pans, brack pans, and salt pans. The surface of the salt pans, such as those at Aminuis and west of the Etosha pan, becomes covered during the dry season with a dazzling white crust composed chiefly of common salt. The Etosha Pan can

hardly be classified amongst these occurrences, as it covers an area of approximately 1,355 square miles (351,700 hectares). In the winter it is dry, but during the summer months or wet season it is covered by a shallow sheet of water which varies according to the rainfall and the amount of water flowing into it from the Kunene when it is in flood by way of the Kwamatuo and Oware Omarambas.

4. **Vegetation.**—(i) *Namib.**—Along the sea coast there is no vegetation whatsoever; from about twenty-five miles inland the landscape is characterized by such plants as the milk bush (*Euphorbia*) and cacti; towards the east, in years of abundant rainfall, it is fairly well grassed. In the river beds which traverse it, trees of rich verdure are found, such as various acacias, the principal of which are the Kameeldoorn (*Acacia giraffae*) and the Ana (*Acacia albida*).

(ii) *South.*—In the extreme south for a considerable distance semi-desert conditions prevail, consisting of an arid, stony plateau and plains supporting edible shrubs, and a sparse growth of grass; in heavy rainy seasons, however, nutritious grasses and flowers spring up everywhere. The river courses, as in the Namib, are clothed with trees. The most widely distributed plants are the milk bush and the Ganna bush (*Salsola aphylla*). The three thorn bush (*Rhigozum trichotomum*) and the Noonie bush (*Eoscia foetida*), the trees being the Kameeldoorn (*Acacia giraffae*) and the Koker-boom (*Aloe dichotoma*).

(iii) *Centre.*—From the southern portion northwards the veld assumes the characteristics of the Karroo until Rehoboth is reached, when it changes into a park-like grass country studded with large thorn trees, being especially well timbered along the water courses. From the mountainous portion of the Windhoek district northwards towards Omaruru, the country is covered with level bush with an undergrowth of very nutritious grass, the valleys and water courses being well timbered mostly with acacia trees, especially the Kameeldoorn (*Acacia giraffae*).

(iv) *North.*—Towards the north the bush becomes denser until it becomes fairly well timbered all over and is traversed in its most northern section by belts of open Mopane forests, and towards the Okawango it is covered by fertile tropical vegetation.

(v) *East.*—In the southern portion of the eastern section the vegetation is karroo bush, intermixed with grass, the valleys being covered with thorn bush, which changes towards the centre, where trees become more numerous, the dunes themselves are covered with thorn bush, large acacia trees, and good grass. From Rehoboth northwards the whole is well timbered and merges into thick tropical vegetation

5. **Rainfall and Climate.**—The rainfall varies from about an inch along the coastal belt to 6 inches in the south, 12 inches in the centre, and about 22 inches in the north.

The climate is hot and dry, but very healthy, except in the northern districts, where malaria is very prevalent during the autumn.

§ 3. Administration.

1. **Central Administration.**—(i) *Mandate.*—The administration of the country is vested in the Government of the Union of South Africa, under the following Mandate:—

THE MANDATE FOR SOUTH WEST AFRICA.

The Council of the League of Nations,

WHEREAS by Article 119 of the Treaty of Peace with Germany, signed at Versailles on 28th June, 1919, Germany renounced in favour of the Principal Allied and Associated Powers all her rights over her overseas possessions, including therein German South West Africa; and

WHEREAS the Principal Allied and Associated Powers agreed that, in accordance with Article 22, Part I (Covenant of the League of Nations) of the said Treaty, a Mandate should be conferred upon his Britannic Majesty to be exercised on his behalf by the Government of the Union of South Africa to administer the Territory aforementioned and have proposed that the Mandate should be formulated in the following terms; and

WHEREAS His Britannic Majesty, for and on behalf of the Government of the Union of South Africa, has agreed to accept the Mandate in respect of the said territory and has undertaken to exercise it on behalf of the League of Nations in accordance with the following provisions; and

WHEREAS, by the aforementioned Article 22, paragraph 8, it is provided that the degree of authority, control, or administration to be exercised by the Mandatory, not having been previously agreed upon by the members of the League, shall be explicitly defined by the Council of the League of Nations.

Confirming the said Mandate, defines its terms as follows:—

Article 1.

The territory over which a Mandate is conferred upon His Britannic Majesty for and on behalf of the Government of the Union of South Africa (hereinafter called the Mandatory) comprises the territory which formerly constituted the German Protectorate of South West Africa.

---

* See Vegetation Map.

Article 2.

The Mandatory shall have full power of administration and legislation over the territory subject to the present Mandate as an integral portion of the Union of South Africa, and may apply the laws of the Union of South Africa to the territory, subject to such local modifications as circumstances may require.

The Mandatory shall promote to the utmost the material and moral well-being and the social progress of the inhabitants of the territory, subject to the present Mandate.

Article 3.

The Mandatory shall see that the slave trade is prohibited, and that no forced labour is permitted, except for essential public works and services, and then only for adequate remuneration.

The Mandatory shall also see that the traffic in arms and ammunition is controlled in accordance with principles analogous to those laid down in the Convention relating to the control of the arms traffic, signed on 10th September, 1919, or in any convention amending the same.

The supply of intoxicating spirits and beverages to the natives shall be prohibited.

Article 4.

The military training of the natives, otherwise than for purposes of internal police and the local defence of the territory, shall be prohibited. Furthermore, no military or naval bases shall be established or fortifications erected in the territory.

Article 5.

Subject to the provisions of any local law for the maintenance of public order and public morals, the Mandatory shall ensure in the territory freedom of conscience and the free exercise of all forms of worship, and shall allow all missionaries, nationals of any state, member of the League of Nations, to enter into, travel, and reside in the territory for the purpose of prosecuting their calling.

Article 6.

The Mandatory shall make to the Council of the League of Nations an annual report to the satisfaction of the Council, containing full information with regard to the territory, and indicating the measures taken to carry out the obligations assumed under Articles 2, 3, 4, and 5.

Article 7.

The consent of the Council of the League of Nations is required for any modifications of the terms of the present Mandate.

The Mandatory agrees that, if any dispute whatever should arise between the Mandatory and another Member of the League of Nations relating to the interpretation of the application of the provisions of the Mandate, such dispute, if it cannot be settled by negotiation, shall be submitted to the Permanent Court of International Justice, provided for by Article 14 of the Covenant of the League of Nations.

The present Declaration shall be deposited in the archives of the League of Nations. Certified copies shall be forwarded by the Secretary-General of the League of Nations to all Powers Signatories of the Treaty of Peace with Germany.

Made at Geneva, the 17th day of December, 1920.

(ii) *Principal Officers.*—The following is a list of the principal officers of the Administration in South West Africa. Judicial and police officers are shown in § 8 below :—

Administrator	The Hon. A. J. Werth.
Secretary for South West Africa	H. P. Smit.
Divisional Superintendent of Railways	A. H. Wallis.
Chief Clerk	F. P. Courtney Clarke, B.A., LL.B.
Native Commissioner and Inspecting Officer	H. W. Drew.
Accountant	W. A. Rennie.
Revenue Officer and Tax Assessor	R. Lefebvre.
Medical Officer to the Administration	Dr. L. Fourie, M.B., Ch.B., M.B.E.
Surveyor-General	A. G. Landsberg.
Inspector of Mines	L. G. Ray.
Director of Posts and Telegraphs	Lt.-Col. J. A. Venning, D.S.O.
Boring Engineer	J. Traas, M.C.
Director of Education	H. H. G. Kreft, B.A.
Registrar of Deeds	L. P. Borchers.
Senior Veterinary Officer	R. S. Garraway.
Manager of the Land and Agricultural Bank of South West Africa	J. T. Taylor.

2. **District Administration.**—The territory, exclusive of Ovamboland, is divided into seventeen magisterial districts, wherein the various magistrates exercise certain administrative as well as judicial functions. They are charged with the functions of receivers of revenue, and, excepting in the districts of Windhoek and Luderitz, with the control of district native affairs.

3. **Local Government.**—Town and district councils were established in 1909 by a decree of the Imperial Chancellor with powers which were very similar to those in the Union except that the Governor had power to order the councils to do or to refrain from doing anything he pleased. The district councils lapsed on the occupation of the country by the

Union Forces, but the town councils were allowed to continue in office until the end of 1918. Their powers were then taken away and exercised by the magistrates. This step became necessary as there was a tendency for the councils to become political in character. In July, 1920, a Proclamation re-establishing municipal councils was issued, under which the councillors were nominated by the Administrator for a period of one year and certain powers of intervention were reserved. In every case half the number of councillors appointed were Germans. In other respects the Proclamation followed Union lines, and a rating system was established in lieu of the Municipal Income Tax, which formed the chief feature of municipal finance under the German regime. This change gave rise to a little difficulty at the start, as the German portion of the council did not understand the new system. A Municipal Amendment Proclamation was promulgated in 1922, providing for the election of half of the members of municipal councils. The first elections took place in September, 1922. In January, 1925, a Proclamation (No. 2 of 1925) was issued under which it is competent for the Administrator to establish a Village Management Board in any village not being a municipality, and in any other area of residence of any community. Such Board, of which the magistrate of the district is *ex-officio* chairman and treasurer, shall consist of not less than two and not more than four members, appointed by the Administrator during pleasure from amongst the residents in the area for which it has been constituted, and shall possess certain powers of local government defined by the Proclamation.

Hospital Boards have been established at four centres—Windhoek, Luderitz, Grootfontein, and Keetmanshoop—at all of which hospitals have been opened. Assistance is given to these Boards on lines similar to those laid down in the Cape Hospital Ordinance of 1912, under the Hospitals and Charitable Institutions Proclamation, 1922, which provides for the election of Hospital Boards.

4. **Capital.**—Windhoek, with a population of 3,460 Europeans and approximately 4,000 natives, is the capital town, and occupies a central position in the territory. It stands at an elevation of 5,600 feet and is finely situated within an amphitheatre of hills. Besides the Government Buildings, the Administration owns a large number of substantial houses which are allotted to Government officials. There are other fine buildings in the town which give it an air of solidity and comfort. The population has increased so rapidly during the last two years that accommodation is hard to obtain and the water supply is becoming inadequate. As a business centre the place has proved itself to be sound.

There are three hospitals (two for Europeans and one for natives) as well as a maternity home. There are large schools with hostels attached for both the old and new population, and the Church of England has opened a school for girls. In the suburb of Klein Windhoek there are market gardens which provide the town with fruit and vegetables. The municipality has recently made great improvements in the streets of the town and in the Zoological Gardens.

Windhoek is distant by rail from Swakopmund 254 miles, from Luderitz 542 miles, from Cape Town 1,384 miles, and from Johannesburg 1,338 miles.

§ 4. Constitutional Development.

1. **Constitution.**—Under Union Act No. 49 of 1919 the exercise of the *Mandate* was vested in the Governor-General who, by Proclamation (Union) No. 1 of 1921, delegated his powers to the Administrator appointed by the Union Government. The Administrator therefore possessed power of legislation and controlled every form of governmental activity in the territory, with the exception of the railways, which in terms of Union Act No. 20 of 1922 are worked in conjunction with the Union Railways and Harbours under the Minister of Railways.

Recently, however, it was decided the time had come to confer a limited measure of self-government upon the inhabitants of South West Africa, and the constitution granted is embodied in Union Act No. 42 of 1925. This provides for the creation of an Executive Committee, an Advisory Council, and a Legislative Assembly.

The Act came into operation on 5th August, 1925, and by Proclamation No. 57, dated the 19th March, 1926, the Governor-General of the Union declared that the Executive Committee, Advisory Council, and Legislative Assembly should be constituted. The elections for the members of the Legislative Assembly took place on the 25th May following.

2. **Executive Committee.**—This body consists of five members, one of whom shall be the Administrator (who shall be Chairman) and the remaining four persons chosen by the Assembly from among its own members or otherwise at its first meeting after any genera

election. The election of members shall, whenever such an election is contested, be according to the principle of proportionate representation, each voter having one transferable vote.

All members other than the Administrator hold office for the duration of the Assembly and until their successors are chosen.

The Administrator in Executive Committee carries on the Administration of those matters in respect of which it is competent for the Assembly to make Ordinances.

All matters are determined by a majority of votes of the members present, and in case of equality the Administrator has a casting vote.

Three members of the Committee (of whom the Administrator or the person appointed by the Governor-General to act as Administrator or to be the Deputy-Administrator shall be one) constitutes a quorum at any meeting of the Committee.

The remuneration of members of the Committee, other than the Administrator, is determined by the Governor-General.

The four persons chosen as members of the first Executive Committee are: Messrs. D. W. F. E. Ballot, F. J. Jooste, F. W. Kegel, and A. Voigts.

3. **Advisory Council.**—This body consists of eight members, viz., the Administrator (who shall be Chairman), the other members of the Executive Committee, and three members appointed by the Administrator, subject to the approval of the Governor-General.

One member so appointed by the Administrator must be an official selected mainly on the ground of his thorough acquaintance, by reason of his official experience or otherwise, with the reasonable wants and wishes of the non-European races in the territory.

The Council meets at such times and places as may from time to time be determined by the Administrator, and four members forms a quorum.

The duties and functions of the Council are to advise the Administrator in regard to—

(*a*) those matters in respect of which the Assembly is not competent to make Ordinances, including matters of general policy and administration apart from routine matters of administration;

(*b*) his assent to an Ordinance passed by the Assembly or its reservation for the signification of the pleasure of the Governor-General; and

(*c*) any other matter upon which its advice may be requested by the Administrator.

Members of the Council hold their seats thereon for the duration of the Assembly and continue to hold their seats until after a general election of the Assembly a new Council can be constituted.

Every member of the Council, except the Administrator, receives such remuneration as the Governor-General may prescribe.

The members of the Advisory Council are Messrs. D. W. F. E. Ballot, F. J. Jooste, F. W. Kegel, A. Voigts, C. N. Menning, A. Schad, and M. Otzen. The last three mentioned are the members appointed by the Administrator.

4. **Legislative Assembly.**—The Assembly consists of eighteen members, twelve of whom are elected by the voters of the territory and six appointed by the Administrator, subject to the approval of the Governor-General.

The duration of the Assembly shall be three years from the date of its first meeting after each general election.

Any person who is for the time being enrolled as a voter and who is not subject to the disqualifications prescribed by the Act is eligible for election or for appointment as a nominated member. Any person shall be disqualified who—

(*a*) has at any time been convicted of a crime or offence for which he has been sentenced to death or to imprisonment without the option of a fine, unless he has received a grant of amnesty or a free pardon or unless the imprisonment has expired at least five years before the date of nomination or election;

(*b*) is an unrehabilitated insolvent;

(*c*) has been declared by a competent court to be of unsound mind;

(*d*) holds any office of profit under the Administration of the territory or of the Government of the Union;

(*e*) ceases for any other reason to be qualified to be enrolled as a voter.

There shall be a session of the Assembly at Windhoek at least once in every financial year, the interval between the last sitting in one session and the first sitting in the next session being not more than twelve months.

Every member of the Assembly must take an oath or affirmation of allegiance.

The Assembly must choose a chairman, who will have no deliberative vote, but only a casting vote in the event of equality of votes on any question to be determined by the Assembly.

The Administrator or any member of the Executive Committee who is not a member of the Assembly has the right to take part in the proceedings of the Assembly, but may not vote.

The presence of nine members of the Assembly is necessary to constitute a sitting thereof.

The official languages are English and Dutch, but any member may address the Assembly in the German language.

The remuneration of members of the Assembly is fixed by the Governor-General.

The first sitting of the first session of the Legislative Assembly took place at Windhoek on the 15th of June, 1926. The names of the persons who were declared duly elected* as members of this body, together with the names of the electoral divisions which they each represented, are given hereunder :—

Gibeon	C. J. F. Grobler, Esq.
Gobabis	F. J. Jooste, Esq.
Grootfontein	F. W. Kegel, Esq.
Keetmanshoop	B. J. Espach, Esq.
Kolmanskuppe	W. H. Fischer, Esq.
Luderitz	H. B. Husekorn, Esq.
Okahandja	A. Voigts, Esq.
Omaruru	C. F. T. Weslenfeld, Esq.
Swakopmund	R. R. R. Blank, Esq.
Warmbad	C. H. Oberholzer, Esq.
Windhoek Central	P. Müller, Esq.
Windhoek District	D. W. F. E. Ballot, Esq.

The following persons have been appointed to be the nominated members of the Legislative Assembly :—

I. J. J. Buys, Esq.	P. Guhr, Esq.
G. Curtis, Esq.	A. Stauch, Esq.
J. G. de Wet, Esq.	C. J. van Tonder, Esq.

5. **Reservations of Legislative Powers.**—The Assembly has power to legislate by Ordinance upon all matters except those which have been expressly reserved. The reservations are contained in sections 26, 27, and 28 of the Act, which read as follows :—

Section 26.—Except with the consent of the Governor-General previously obtained on any particular occasion and communicated to the Assembly by message from the Administrator, it shall not be competent for the Assembly to make an ordinance in relation to any subject falling within the following classes of matters, i.e. to say—

(*a*) native affairs or any matters specially affecting natives, including the imposition of taxation upon the persons, land, habitations, or earnings of natives. Whenever any Ordinance of the Assembly imposes taxation upon persons, lands, habitations, or incomes or earnings generally, natives and their lands, habitations, and earnings shall be exempt from its provisions ;

(*b*) mines, minerals, mineral oils, and precious stones, or the moneys derivable therefrom or payable to the Administration in respect of licences for prospecting or winning the same or as share of the produce thereof or any taxation in connexion therewith ;

(*c*) the acquisition, construction, management, regulation, control, and working of railways and harbours in the territory ; and the organization, discipline, and conditions of employment of and the payment of pensions, retiring allowances and financial benefits to persons in the employment of the Railway and Harbours Administration ;

(*d*) the organization of and discipline and conditions of employment of persons in the public service who are serving in the territory, and the payment of pensions, retiring allowances, and financial benefits to such persons ;

(*e*) the constitution and jurisdication of courts of justice, whether superior or inferior, and the practice or procedure to be observed therein ;

(*f*) the administration, management, and working of the postal, telegraph, and telephone services ;

(*g*) the establishment or control of any military organization in the territory ;

(*h*) the movements or operations of any unit of the South African Defence Forces within the territory ;

(*i*) the entry of immigrants into the territory or of other persons ;

(*j*) tariffs of customs and excise duties and the control and management of customs and excise ;

(*k*) currency and banking and the control of banking institutions.

* The elections were held on the 25th May preceding.

Section 27.—(i) Except with the consent of the Governor-General previously obtained on any particular occasion, and communicated to the Assembly by message from the Administrator, the Assembly shall not, until the expiration of a period of at least three years from the date of the first sitting of the first session of the Assembly, be competent to make ordinances in relation to any of the following subject-matters :—

(*a*) The establishment or control of any police force in the territory.

(*b*) Civil aviation.

(*c*) Primary or secondary education in schools supported or aided from the revenues of the territory.

(*d*) The establishment, management, or control of any land or agricultural bank in the territory.

(*e*) The allotment, sale, lease, or disposal of Government lands in the territory.

(ii) At any time after the expiry of the said period of three years, if power has not been so conferred by the Governor-General upon the Assembly to make Ordinances in relation to any particular subject-matter specified in sub-section (I), then the Governor-General may, on a recommendation made by the Assembly and embodied in a resolution for which it is certified by the Chairman thereof that not less than two-thirds of the members thereof voted, declare by proclamation in the *Gazette* and in the *Official Gazette* of the territory, the full competency of the Assembly to make Ordinances in respect of that subject-matter.

(iii) Save as is specially provided in this section, the provisions thereof shall remain in operation after the said period of three years.

Section 28.—It shall not be lawful for the Assembly—

(*a*) to originate or pass any Ordinance, Vote, or Resolution which has the effect of appropriating any part of the Territory Revenue Fund formed as hereinafter provided ; or

(*b*) to originate or pass any Ordinance, Vote, or Resolution imposing any tax, duty due, or charge or burden on the people,

unless such Ordinance, Vote, or Resolution has first been recommended to the Assembly by, written message of the Administrator during the session in which it is proposed.

Every Ordinance passed by the Assembly must be presented to the Administrator for his assent.

The Administrator may then—

(*a*) refer the Ordinance back to the Assembly, with such amendments as he may suggest for its consideration ;

(*b*) assent to the Ordinance ;

(*c*) reserve the Ordinance for the signification of the Governor-General.

In the last-mentioned event the Administrator must transmit the Ordinance, together with such explanatory observations as may be necessary, to the Governor-General, who may declare within six months after receipt thereof by him that he allows or disallows the Ordinance or that he reserves it for further consideration. An Ordinance so reserved shall have no force or effect unless and until the Governor-General within a further period of six months from the date of his reservation declares that he does not exercise his power of disallowance.

Copies of all Ordinances assented to and a return indicating the Ordinances which have been reserved for further consideration by the Governor-General or disallowed and the reasons for reservation or disallowance must be laid upon the Tables of both Houses of Parliament.

Unless a particular date is fixed, every Ordinance shall come into operation as from the date of its first publication in the *Gazette*.

Although not competent to make Ordinances in respect of the matters reserved by sections 26 and 27 of the Act the Assembly may, by resolution, recommend to the Governor-General or to the Administrator the issue of a proclamation enacting a law or the amending or repealing of any law relating to such matters.

As regards Finance, the Act provides for the formation of a fund known as the Territory Revenue Fund which may only be drawn upon under the authority of an Appropriation Ordinance passed by the Assembly and in pursuance of a warrant under the hand of the Administrator directed to an officer serving under the Administration of the territory ; provided that until such appropriation has been made and for a period not exceeding two months after the end of a financial year, the Administrator may withdraw from the Fund moneys to meet expenditure on services in respect of which there has been an appropriation up to the end of that financial year.

The annual estimates of expenditure for the territory shall be prepared by the Administrator in consultation with the Advisory Council, and thereafter submitted to the Assembly.

If the Assembly rejects or fails to pass—

(*a*) an Ordinance appropriating in any financial year moneys from the Territory Revenue Fund sufficient, in the opinion of the Administrator, to pay during that year the salaries and allowances of the Administrator, of the Judge of the High Court, and of officers serving under the Administration, and to carry on the public administration of the territory, and any other services which the Administrator certifies to be necessary in the interests of the territory or to meet any liabilities which have been incurred in or in respect of the territory or of any railway or harbour works therein; or

(*b*) an Ordinance imposing any tax to raise in any year revenue which the Administrator certifies to be, with other revenues, necessary for the purposes described in paragraph (*a*);

or though passing the Ordinance, passes it with amendments to which the Administrator personally is unable to agree, regard being had by him to the purposes aforesaid, the Administrator may transmit a full report in relation to the whole matter to the Governor-General and the Governor-General may, after consideration of that report and of any further report or recommendation on the matter, passed and transmitted by the Assembly by message, make a law, by proclamation under the powers reserved to the Governor-General under this Act, providing for such appropriation or such tax (as the case may be) as may, in the opinion of the Governor-General, be sufficient for the purposes mentioned in paragraph (*a*) or paragraph (*b*) of this section (as the case may be).

Section 44 of the Act contains the following important reservation:—

Section 44 (i).—Nothing in this Act contained shall be construed as in any manner abolishing, diminishing, or derogating from those full powers of administration and legislation over the territory as an integral portion of the Union which are conferred by the mandate hereinbefore recited and have been confirmed by the Treaty of Peace and South West Africa *Mandate Act*, 1919 (Act No. 49 of 1919), or as modifying any provision of that Act. Those full powers of administration and legislation are hereby expressly reserved to the Governor-General and may be exercised or delegated by him in accordance with that Act to the intent that by proclamation new laws may be made for the territory, existing proclamations may be repealed, amended, or modified, or any Ordinance made by the Assembly and in force under this Act may be repealed, amended, or modified. Every such proclamation of the Governor-General or of the Administrator shall, before it has the force of law in the territory, be published in the *Official Gazette* thereof.

(ii) A Proclamation of the Administrator or an Ordinance made by the Assembly shall, though promulgated, have effect in and for the territory so long and as far only as it is not repugnant to or inconsistent with a Proclamation of the Governor-General, or an Act of the Union Parliament, applicable to the territory.

6. **Franchise.**—(i) Every European male person who—

(*a*) has been resident in the territory for twelve months immediately prior to the date fixed under paragraph 3 of this Schedule for the commencement of the provisional list; and

(*b*) is twenty-one years of age or upwards at that date; and

(*c*) is a British subject,

as well as every male person who, under section *two* of Act No. 30 of 1924, became a British subject naturalized under Act No. 4 of 1910, shall be entitled to be registered as a voter unless in either case he is disentitled for any reason mentioned in paragraph 2 of this Schedule. But no person shall be entitled to be registered on more than one list or, if registered on more than one list, to vote in more than one electoral division.

(ii) No person shall be entitled to be so registered if he has been—

(*a*) convicted at any time of murder unless he has obtained a free pardon therefor;

(*b*) convicted at any time of any offence and sentenced to imprisonment without the option of a fine, which imprisonment has not expired at least three years before the date of the commencement of registration, unless he has obtained a free pardon for that offence.

For the purposes of this law the port and settlement of Walvis Bay is deemed to form part of the territory, but that part of the mandated territory east of the twenty-first degree of east longitude and known as the Caprivi Zipfel is excluded. Although actually a portion of the mandated territory this strip, on account of its geographical position, has been placed under the Administrator of the Bechuanaland Protectorate.

Section 45 of the Act provides as follows :—

Section 45.—After the expiration of a period of three years from the date of the first sitting of the first session of the Assembly, the Governor-General may, on a recommendation made by the Assembly and embodied in a resolution for which it is certified by the Chairman thereof that not less than two-thirds of the members thereof voted, repeal or alter any provision of this Act, except sections *twenty-six* and *forty-four* and this section; provided that the Governor-General shall not act upon such a recommendation unless the proposals contained therein have lain upon the Tables of both Houses of Parliament for a period of one month and during that period neither House has expressed its disapproval of the proposals.

§ 5. Population.

1. **General.**—The following table gives the final results of the census taken in the territory on 3rd May, 1921 :—

POPULATION—CENSUS OF 3rd MAY, 1921.

Race.	Male.	Female.	Total.
European*	11,242	8,190	19,432
Bantu	92,627	84,835	177,462
Other Coloured	15,394	15,451	30,845
TOTAL	119,263	108,476	227,739

2. **Population of Towns.**—According to the census of 1921 the population of the towns was as follows :—

	European.	Other.
Windhoek	3,460	4,399
Luderitz	1,003	1,014
Keetmanshoop	1,026	1,659
Swakopmund	1,078	694

3. **Births, Deaths, Marriages.**—The registration of births and deaths has become compulsory with the adoption in the Territory of Union Act No. 17 of 1923, with effect from 1st January, 1924. A Proclamation was issued during 1920 under which the celebration of marriages was brought into line with Union procedure.

The vital registration figures for the Territory between 1919 and 1924 are as follows :—

	Births. (Europeans.)	Deaths. (Europeans.)	Marriages.
1919	549	243	190 (Europeans).
1920	540	100	178 (Europeans).
1921	544	121	513 (All races).
1922	537	84	448 (All races).
1923	428	109	164 (Europeans). 297 (Other).
1924	640	141	205 (Europeans). 285 (Other).

* Preliminary unaudited results of European Population Census taken on the 4th May, 1926 :— Males, 13,708; Females, 10,407; Total persons, 24,115.

The following tables show under different classifications the number of vital events registered in the years 1924 and 1925 :—

(i) **SUMMARY OF VITAL REGISTRATIONS—EUROPEANS—YEARS 1924 AND 1925.**

The following native customs prevail in regard to marriages, births, and deaths :—

(i) *Marriages.*—Among the Damara and Herero races an intending bridegroom reports to his father that he contemplates marrying. The father, if he approves, sends presents of food to the girl's family. If this offer of friendship is accepted, the groom's father proceeds with other members of his family to the girl's house, and the members of both families hold a council on the proposed alliance. If the meeting decides favourably upon the marriage, and if the headman of the tribe consents, stock is slaughtered by the groom's family, the number of animals depending on the extent of their possessions, and a feast is held. This marriage feast consummates the union. It is, by these customs, a condition precedent to marriage that the husband must pay the wife's family a number of stock, regulated by the husband's state of affluence, on the birth of each child.

(ii) *Births.*—When a female member of the Damara or Herero race is confined, the women of her own and her husband's family congregate at her hut and remain there until the child is born. When this takes place the headman of the tribe and the elders of both families are informed of the occurrence, and also of the sex of the child. The father then slaughters a goat or a calf for the women in attendance, and later on one for his wife.

(iii) *Deaths.*—In the case of a dangerous illness among Damaras or Hereros the sick person's relations and friends are informed and they visit the sick bed. Should death take place, the female relations assemble at the hut and commence a dismal wail. Other women join them even though they have never known the deceased, and the wail is kept up for four or five hours. It usually happens that before the wail is finished a hundred or more native women will be taking part; no men participate. When the body has been placed in the coffin, which is made by the male relations, the natives form up, relations immediately behind the cortege, and march slowly to the burial place. A few sentences are recited by a male relative and then a few chanted by the mourners, and this is kept up until the procession has reached the hut on the return journey. At the graveside a cup of water is produced, and every person dips his or her fingers into the water and sprinkles some on the grave, simultaneously uttering the following words : " I am your brother or sister —I have come to give you greetings, and to bid you good-bye in your grave. There you remain in your resting-place. I return home." The headmen and councillors then decide who is the next-of-kin and the property is handed to him in their presence. In the event of a married woman dying, the parents, and not the husband, get her belongings.

4. **Naturalization.**—The Union Act No. 30 of 1924 made the *Naturalization of Aliens Act* of 1910 effective in the Territory, which for the purposes of the Act is considered to form part of the Union. The *South West Africa Naturalization of Aliens Act*, No. 30 of 1924, provides that every adult European who, being a subject of any of the late enemy powers, was on the 1st January, 1924, or at any time thereafter before the commencement of the Act (15th September, 1924), domiciled in the Territory, shall, at the expiry of six months after the commencement of the Act, be deemed to have become a naturalized British subject, unless within that period he has signed a declaration that he is not desirous of being naturalized.

The final lists of persons naturalized in this way have been published and show that out of a total of 3,489 persons who were eligible, 3,228 accepted British citizenship. It is laid down in the Act that no person signing a declaration against his naturalization under the Act will surrender any right or privilege which he may have had as an alien prior to such declaration.

§ 6. Public Health and Hospitals.

1. **Medical Services.**—The health and medical services, for which the Administration is responsible, are performed by one whole-time medical officer, stationed at Windhoek, and by part-time district surgeons, whose appointments are made on the same basis as in the Union of South Africa.

The Union *Public Health Act* (No. 36 of 1919), with certain amendments to meet local circumstances, was extended to South West Africa by Proclamation No. 36 of 1920. Local authorities are responsible for the sanitary and other measures necessary to safeguard and promote the public health in their respective areas, and in certain matters receive financial assistance on a well-defined basis from the Administration. Where a local authority fails or refuses to carry out its duties in this respect, the Administration may step in and carry out the necessary measures at the expense of such local authority.

There are urban local authorities at Luderitz, Keetmanshoop, Windhoek, Okahandja, Karibib, Swakopmund, and Omaruru and rural local authorities at Mariental, Gibeon, Walvis Bay, and Grootfontein. In the remaining districts the magistrate is the rural local authority.

The port health work is performed by the respective district surgeons at Luderitz and Swakopmund. Quarantine accommodation and facilities for dealing with infection on board vessels are not available at the ports at present, but the provision of these is under contemplation.

2. **Water Supply and Sanitation.**—The population is almost entirely dependent on the underground water for its water supply, which is generally obtained either from springs or from wells and boreholes. At Luderitz water from these sources is not available at present and supplies are obtained by the distillation of sea-water. All the urban areas have municipal supplies. The water is of good quality, but is liable to a considerable seasonal variation in quantity, according to the rainfall. In no locality is the supply adequate for an efficient water-borne sewerage system. Instances of pollution of water supply are seldom met with.

Increased attention is being directed by local authorities towards bettering the sanitary conditions among both the European and native communities. Not only has considerable improvement been effected in the conservancy system of refuse disposal, which is in operation throughout the territory, but more attention is also being paid to the prevention of nuisances and to the supervision of the food supplies, etc. The want of skilled supervision is seriously felt, but it is confidently expected that, as times improve, local authorities will avail themselves of the facilities for the appointment of certificated inspectors afforded under the provisions of the *Public Health Act.*

3. **General Health Conditions.**—The climate is healthy. Malaria is endemic in portions of the northern and north-western districts and along the river valleys of Namaqualand. It is generally of a mild type and epidemic outbreaks occur only during exceptionally wet seasons, usually at intervals of five or six years, when isolated cases of blackwater fever may also be met with. Long residence in the interior is liable to lead to functional disturbances of the nervous and circulatory systems, which, however, can be obviated by periodical visits to the bracing climate of the coast. Acute rheumatism, as well as acute respiratory and other conditions, are infrequent. Affections of the eye and ear are rarely met with. Sunstroke and snake-bite are of uncommon occurrence.

4. **Remarks on Prevalence of certain Diseases.**—(i) *Acute Polyomyelitis* has not been met with, either during the German regime or since the occupation by the Union forces.

(ii) *Anthrax* is not infrequently met with amongst natives owing to the practice of eating the meat of animals dying from disease. The native, however, appears to have acquired a considerable degree of immunity against anthrax, as it is remarkable what a small percentage of those who eat infected meat subsequently contract the disease. The lesions in the majority of cases remain localized and circumscribed and, as the disease is well known to the natives, are either cauterized or excised. In 1879, known as *Ojondimba* or *the year of the anthraxpox*, there was an extensive outbreak among the Herero and many natives died. Since 1917 only four cases have been dealt with locally, and all recovered. Two fatal cases among the natives were reported from Gobabis in 1921, and during 1922 nine cases, without any deaths, were reported from the Okambahe Reserve.

(iii) *Beri-Beri.*—Localized outbreaks are stated to have occurred during the Herero war, but the disease is seldom met with nowadays.

(iv) *Blackwater Fever* is of infrequent occurrence. Isolated cases occur from time to time in the Districts of Otjiwarongo, Outjo, Grootfontein, and Gobabis. During the year 1921 there were six cases with three deaths in the Grootfontein District, but none have been met with since.

(v) *Cholera.*—There is no record of the occurrence of this disease in South West Africa.

(vi) *Diphtheria* is endemic, but has never been very prevalent. Serious outbreaks are rare. Of seventeen cases notified during 1921, the diagnosis was doubtful in two, while twelve cases, with two deaths, occurred in connection with a small school outbreak at Omaruru, the disease only having been recognized after the sudden death of a pupil who had not received medical attention. During the year 1922 three cases were notified and there were no deaths.

(vii) *Dysentery.*—The baccillary form of dysentery was widely prevalent during the German regime and usually occurred in early summer and towards the end of the rainy season. During the Herero and Hottentot wars the disease took a considerable toll among the troops and prisoners of war, and among infants and young children. Since 1916 there has been a steady decrease in its prevalence and in recent years only a few sporadic cases have been dealt with.

(viii) *Enteric Fever.*—According to Missionary Irle, "Die Herero," typhoid fever was unknown prior to the year 1898. During the Herero war the disease became widely disseminated throughout the country and was accompanied by a considerable mortality. Subsequently, annual epidemic outbreaks occurred in the urban areas generally towards the end of the rainy season. Owing to the general insanitary conditions, infection was usually spread by flies. During recent years, there have been no serious outbreaks. During the year 1921 thirteen cases were notified, namely two from Windhoek and eleven from Kolmanskop (Luderitz District), while in 1922 fourteen sporadic cases, with three deaths, were notified. In 1923, localized outbreaks occurred at Tsumeb and Warmbad.

(ix) *Framboesia.*—The existence of this disease among the Hottentots in the south was established from specimens sent to the Institut für Schiffs und Tropen Hygiene in Hamburg. It is of uncommon occurrence.

(x) *Epidemic Cerebro-spinal Meningitis.*—Only two cases have been met with. Both occurred in Ovambo labourers in 1917 and ran a very acute and rapidly fatal course.

(xi) *Influenza.*—An extensive epidemic, affecting a large percentage of both European and native communities, occurred in July and August, 1907. The disease was of a mild character among Europeans, but caused a considerable mortality among the natives. Between the years 1907 and 1918 there was a certain prevalence generally during the winter, and this seasonal incidence is believed to have been the cause of the frequency of respiratory disease among the natives during this period. During the pandemic of 1918, infection was introduced from the Union in the month of October and the disease spread over the whole territory with alarming rapidity. All sections of the population were affected, and in some localities the mortality was very high. With the exception of an epidemic of a mild type among the natives of Ovamboland, the year 1919 was free from influenza. A widespread prevalence also of a mild character and mainly affecting the native population occurred in October and November, 1920. In July, 1921, there was a further extensive recrudescence, attended by a very considerable mortality among natives in some localities, while in 1922 the disease was prevalent towards the end of the year.

The total number of deaths from influenza from the 7th October, 1918, to the 31st December, 1922, was as follows:—

	Europeans.	*Native.*
1918	416	2,338
1919	—	—
1920	—	—
1921	21	307
1922	3	30

(xii) *Leprosy.*—The existence of leprosy in South West Africa was first discovered when a native from Barotseland sought advice at the Windhoek Native Hospital on the 26th January, 1918. He had been suffering from the disease shortly after his arrival in the country about ten years previously. On the 27th June, 1918, another patient, a Hottentot male, who had been treated for syphilis for years, was admitted with leprosy to the same hospital and died from nephritis three weeks later. He was a native of this country and had lived in the Gibeon and Keetmanshoop Districts all his life. At about the same time a case, of which the particulars are not available, was reported from Outjo. This patient also died before his removal to an institution could be effected. Steps are being taken to investigate the prevalence of the disease among the natives inhabiting the banks of the Okavango River, among whom it is said to exist. Lepers are removed to institutions in the Union as soon as they are certified.

(xiii) *Madura Foot.*—Only four cases of this disease have been recorded, viz., two in 1910 and two in 1918. In each instance the patient was a Hottentot.

(xiv) *Malaria* is endemic over the greater portion of South West Africa. It is more prevalent in the north and east than in the south-west. In the south it is common along the banks of the Fish River, and is also met with along the Auob and Nosob Rivers. A few sporadic cases have also been reported from isolated farms having storage dams in close proximity to the homestead in the Keetmanshoop District. In the west the disease is met with only after seasons with an exceptionally heavy rainfall, and then only along the Kuisib River and the Swakop and other river valleys. One primary infection was recorded in Walvis Bay in May, 1921, in a patient who had not previously suffered from malaria, and had not been out of the place for nine months.

While the disease is common in the north and north-east, a special prevalence is met with only in years with an abnormally heavy rainfall, usually at intervals of five or six years. The District Surgeon at Grootfontein in a report on the subject writes:—

> The malaria may better be called seasonal, lasting from February to May inclusive (that is, towards the end of and immediately after the rainy season), and during these months small epidemic outbreaks may appear in schools, etc., where numerous persons live together without sufficient protection. There are no areas as far as I know where it is epidemic, although cases of relapse may occur throughout the year. There are two prevailing types, namely the *Irregular Remittent* and the *Simple Tertian*. In my experience the *Irregular Remittent* is the more frequently met with. The *Simple Tertian* is not so common as the *Remittent* and closely resembles *typical benign Tertian.*

Under favourable conditions the disease is often attended by a considerable mortality among natives. In the years 1909 and 1917, large numbers of Bushmen died from malaria along the north-eastern and eastern borders of the territory. There would appear to have been an epidemic prevalence of the disease in the years 1857 and 1892, known as *Ojotjindjumba* or *year of the malaria* by the Herero. According to Missionary Irle, there was a similar prevalence in 1874, when "all the inhabitants were down with it."

(xv) *Malta Fever.*—The existence of this disease in South West Africa was first established by the Institut für Schiffs und Tropen Hygiene in Hamburg, in October, 1908, in a patient who had contracted it in the Windhoek District. Though it is more prevalent in the small stock-farming districts of the south than in the north, sporadic cases have since been reported from all the districts of the interior, including Ovamboland. The largest number of cases recorded during any one year is fifteen. In 1921 four were notified, all from the Grootfontein District, and in 1922, one case from Tsumeb and one from Keetmanshoop.

(xvi) *Measles* is said to have existed among the native population prior to the German occupation, but there is no record of any serious epidemic. Localized outbreaks occurred from time to time during the German regime. In 1918 a widespread epidemic of mild type prevailed among the natives, and since then sporadic cases have occurred in various localities.

(xvii) *Pellagra* and *Plague* are unknown in South West Africa.

(xviii) *Relapsing Fever.*—During the year 1922, two cases were reported from Tsumeb.

(xix) *Scarlet Fever* is stated never to have been prevalent among the natives of this country, nor do the natives appear to have been affected to any extent by any of the local outbreaks, including an extensive epidemic among school children in Windhoek in 1918 and 1919. Seven sporadic cases were notified during each of the years 1921 and 1922.

(xx) *Scurvy.*—During the Herero war scurvy frequently occurred among the troops and prisoners of war and was responsible for over 50 per cent. of the high mortality among the latter. Some idea of its ravages among the prisoners of war may be obtained from the fact that of 2,000 Witbooi prisoners who were placed on Shark Island in September, 1906, 840 had died from scurvy within a period of four months. The disease was still prevalent when the country was occupied by the Union forces, but owing to the general improvement in the condition of the natives and the steps taken by the Chamber of Mines and other large employers of labour at the instance of the Administration, it is of infrequent occurrence now.

(xxi) *Sleeping Sickness* is unknown. The tsetse fly is not found in the territory.

(xxii) *Smallpox.*—It is stated that smallpox was unknown to the Herero until the year 1864, known among the Herero as *Ojojtikoroha* or *year of the pox*, when it was introduced into Hereroland by the Nama. Large numbers of Herero and Nama died from the disease. There is no record of any other epidemic outbreaks in this country prior to the German occupation. In 1897 and 1898, there was an epidemic prevalence with a considerable mortality among the Hereros and Damaras in the north-western portion of Damaraland and in the Kaokoveld. *Amaas* or *Kaffirpox* is said to be endemic among the Hottentots in the south, but up to the present only chicken-pox has been identified among them.

(xxiii) *Tuberculosis.*—Tuberculosis was unknown to the natives of South West Africa, with the exception of the Hottentots, up to the beginning of the present century, but a rapid and widespread dissemination took place during and subsequent to the Herero war. It is met with mainly among the natives living under the artificial conditions in the urban locations and is not prevalent among those resident on farms and reserves in the rural areas. The population of Ovamboland and of the Okavango and Kalahari regions is practically free from it. All the local tribes, especially the Ovambo and Bushmen, when removed from their natural surroundings, are very susceptible to pulmonary affections and a considerable proportion of those who have suffered from bronchitis, pneumonia, etc., subsequently succumb to tuberculosis.

Pulmonary tuberculosis is the form usually met with. Abdominal joint and other lesions are comparatively rare. The disease runs a very rapid and acute course and treatment is of very little, if any, avail. As the vast majority of natives suffering from acute respiratory and other diseases are treated in the various native hospitals, it has been possible not only to minimize to some extent the risk of infection of such patients by ensuring a complete restoration of health before discharge from hospital, but also to prevent to a considerable degree the spread of the infection by comsumptive persons. On the other hand, the Luderitz Chamber of Mines is devoting special attention to the feeding, clothing, etc., of the native labourers employed on the diamond mines and is systematically carrying out prophylactic inoculation with Lister's pneumococcal vaccine.

Coincident with the improvement in the general health conditions of the native population during recent years, there has been a steady diminution in the incidence of tuberculosis among them. There is no marked prevalence of the disease among Europeans. Abdominal tuberculosis affecting infants and young children is very rare.

(xxiv) *Typhus Fever.*—There is no record of the occurrence of typhus fever in the territory.

(xxv) *Venereal Disease.*—Syphilis is met with among all native races of the territory, with the exception of the Bushmen. While it has been in existence for a long period among the Hottentots, it was unkown to the Herero and other races in the north until comparatively recent times. It is more prevalent in the urban locations than in the rural areas. Two factors contributed largely to the rapid and extensive dissemination of the disease

since the German occupation, viz., the Herero war and the compulsory periodical examination of natives for venereal disease. The native naturally did not like these examinations and tried every means of evading them, with the result that there was not only a constant migration of infected persons from the urban areas, but also a greater inclination to rely entirely upon the native method of treatment. Among the Herero and other Bantu races the majority of cases coming under treatment are suffering from either primary or secondary syphilis, while among the Hottentots the tertiary and congenital forms are principally met with.

Accurate statistics as to the prevalence of the disease are not available. The Administration provides free treatment by district surgeons for cases among the poor of all races, and in addition, facilities for free treatment and maintenance of native patients exist in connection with all the State-owned native hospitals. At Grootfontein, a compound for dealing with venereal disease among the natives was established in 1921. On the Okavango, remedies are distributed through the missions and the medical orderly stationed at Kuring Kuru, while in Ovamboland the medical officer attached to the Finnish Mission at Onipa has been appointed district surgeon and supplied with necessary drugs for the treatment of malaria and venereal disease. Recent reports show that syphilis is not becoming more prevalent, and in the case of Keetmanshoop, Windhoek, and Grootfontein, a definite decrease in its prevalence is reported.

(xxvi) *Disease due to Intestinal and other Parasites.*—Cestode infections are common and in man confined to *Taenia Saginata*, which has a very wide distribution in South West Africa. *Taenia Solium* is rarely met with. Only one case of *Hydatid disease* has been recorded up to the present. *Bilharzisois* is not common. Of the few recorded cases, in only one could infection be traced to this territory. *Elephantiasis* is not common and only two cases have come under observation. In each case the patient was a Herero. Parasitic skin affections are seldom seen.

5. **Registration of Medical Practitioners, Dentists, and Chemists and Druggists.**—The following registrations have been effected under Proclamation No. 3 of 1920 during the period ending 31st December, 1924 :—Medical practitioners, 31 ; dentists, 10 ; and chemists and druggists, 8.

6. **Mentally Disordered and Defective Persons.**—There are no institutions for the reception of mentally disordered or defective persons, but Union Act No. 38 of 1916 makes provision for the removal of mental patients as soon as they are certified to institutions in the Union. Native patients who are not a danger to themselves or to others are handed over to the care and control of their relatives. The number of patients removed to institutions in the Union is as follows :—

	1920.	1921.	1922.	1923.	1924.
European.....	1	2	2	5	2
Native.....	—	1	1	1	1

7. **Hospitals.**—(i) *State-aided Hospitals.*—In March, 1922, a Proclamation (No. 5 of 1922), based on the *Hospital and Charitable Institution Ordinance* of the Cape Province, was promulgated. Under its provisions every magisterial district in which there is one or more State-aided hospitals is constituted a hospital district, and for the management of the institutions in every such district a Board consisting of six or twelve members is required to be appointed. One-third of the members is appointed by the district council and municipality, one-third by the contributors (a contributor being a person who subscribes, collects, or raises by any means not less than £1 per annum or who subscribes not less than £20 in one donation towards the funds of the Board), one-sixth by the honorary visiting medical staff, and one-sixth by the Administrator.

The Administrator is empowered by notice in the *Gazette* to establish a new hospital district in any magisterial district in which there is no State-aided hospital, on presentation of a petition signed by twenty-five registered property owners in the proposed district, after having consulted the district council and the council of every municipality in the proposed district. After the establishment of a new hospital district, a board is appointed or elected in the same manner as in a magisterial district provided with an existing institution.

For maintenance purposes a Board receives the following subsidy from the Administration, viz., 30s. for every £1 received as collections, contributions, or donations ; £1 for every £1 of the value of all devises or bequests, but not exceeding £500 in respect of the estate of a single testator ; and £1 for every £1 received as fees from patients.

If in any year there is a deficit and the Administrator is satisfied that the Board has reasonably endeavoured to collect voluntary contributions from the public and to recover fees from patients, and that, having regard to the circumstances of the district and the class of patients mostly furnished with relief by the Board, a reasonable amount has been received by the Board from such sources of revenue, he may authorize such deficit to be halved between the Administration and the local authorities in the district, but where there is only one local authority in a district, a sum not exceeding one-third of such deficit shall be payable by it. A hospital board may establish hospitals, dispensaries, maternity

homes, convalescent homes, and other kindred institutions, and may obtain a loan from the Administration for the purpose of acquiring land, erecting buildings, or effecting improvements of a permanent nature, the Administration paying one-half of the interest and sinking fund of any such loan.

The following districts in which there were existing State-aided institutions were constituted hospital districts under the Proclamation, viz., Grootfontein, Windhoek, and Luderitz, and a new hospital district was established at Keetmanshoop.

While the hospital boards are required to furnish relief to all sections of the community, both European and native, accommodation for natives is provided at Luderitz only, as the requirements of the latter in the other hospital districts are met by the existing Government Native Hospital.

(ii) *Mission and Other Hospitals.*—A hospital, with accommodation for both Europeans and natives, is maintained by the Roman Catholic Mission at Swakopmund and at Gobabis, and for Europeans only at Windhoek.

In addition to the above, there is a maternity home (Elizabethhaus), established by a charitable organization in Germany for the benefit of the women in South West Africa, in Windhoek, and hospitals for the treatment of their European and native employees are provided by the various mining concerns at Tsumeb and at Charlottental, Kolmanskop, and Pomona, in the Luderitz District.

(iii) *Medical Care of Natives.*—Four State-owned native hospitals are directly controlled and maintained by the Administration at Windhoek, Keetmanshoop, Karibib, and Omaruru. The number of beds in the various native hospitals is as follows:—Windhoek, 75; Keetmanshoop, 20; Karibib, 12; and Omaruru, 8. With the exception of a small revenue from patients' fees, the whole cost of maintenance of these institutions is borne by the Administration.

Apart from the facilities for the treatment offered by the State-owned native hospitals, the terms of appointment of district surgeons provide for free medical attendance of indigent natives and, in districts in which there are no such institutions, patients of this description requiring hospital treatment are either admitted into the local hospital, if any, or transferred elsewhere at the expense of the State. The South African Railways and the mining industry provide free medical treatment for their native employees. Arsenical and mercurial preparations and iodide of potassium for the treatment of syphilis and quinine for the treatment of malaria are supplied free of charge to district surgeons for the treatment of patients dealt with by them in their official capacity.

A small dispensary for the distribution to natives of quinine and certain stock medicines through a trained European medical orderly is attached to the office of the Resident Commissioner at Ondonga, Ovamboland, and to that of the Native Affairs Officer at Kuring Kuru on the Okavango River. Medicines for distribution to natives are also supplied periodically free of charge to the Finnish Mission, Onipa, Ovamboland, to the Roman Catholic Missions at Nyangana, and Andara on the Okavango River, and at Heirachabis and Gabis in the Warmbad District, and when required, to magistrates and other branches of the Administration.

§ 7. Education.

1. **General.**—Education in South West Africa is controlled according to the provisions of the *Education Proclamation*, 1921, which came into force on the 1st January, 1922. It is an adaptation of the *Consolidated Education Ordinance* of the Cape Province, and provides for the compulsory attendance of all European children between the ages of 7 and 15 (inclusive). The salary scales for teachers are modifications of the Transvaal scales.

Negotiations with the German population ended in November, 1921, when a Concordat was arrived at. As a result of this, thirteen out of seventeen elementary schools were transferred to the Administration on the 1st January. 1922. Those that elected to remain private schools were: Swakopmund, Luderitz, Karibib, and Tsumeb. The German High School in Windhoek remains a private school. The general principle of the Concordat is that the transferred schools are financed by the Administration, and adopt the Union curriculum and system, retaining German as medium to the end of the elementary course. All scholars above Standard I receive a daily lesson in a Union official language, as chosen by the parents. This becomes the chief medium of instruction after Standard VI.

From the 1st January, 1924, for a period of five years, the Administration is subsidizing the German Realschule at Windhoek and the German Volks- und Realschule at Swakopmund on the pound for pound principle. From the 1st January, 1925, for a period of four years, the Administration is subsidizing the German schools at Luderitz, Tsumeb, and Karibib on the same basis, and is also paying a grant to the hostels conducted in conjunction with the above two schools at Windhoek and Swakopmund.

2. **Administration.**—All financial and technical matters are controlled by the Administration of the country. Local committees are appointed to represent the parents. Their functions are mainly advisory. There is no district education rate.

3. **Government Schools.**—Provision is made for both primary and secondary education. The code is that of the Cape Province. Primary education is free, but fees are charged for secondary instruction. There are boarding hostels maintained by the Administration.

4. **Coloured and Native Education.**—The education of the coloured people and the natives is under the supervision of the various missions. The Administration pays the salaries of the teachers and supplies furniture, equipment, and books free of charge. The missions have to supply the buildings. There are only a few coloured schools in the country. Those at Windhoek and Luderitz are under the aegis of the Anglican Church of Damaraland and those in the Rehoboth area are under the Rhenish Mission. The education of the natives is in the hands of the Finnish Mission in Ovamboland, and the Rhenish and Catholic Missions in Damaraland and Namaland. The Wesleyan Church is also taking an active interest in this work. The Education Department has registered fifty-seven mission schools. Thirteen of these have not yet qualified for Government aid. In addition, there is a training school for native teachers at Okahandja. This training school is conducted by the Rhenish Mission. During the long summer vacation the Department conducts summer schools, which provide refresher courses for acting native teachers.

§ 8. Administration of Justice.

1. **Legal System.**—Article 2 of the Mandate, under which the territory is administered by the Government of the Union of South Africa, gave to the Mandatory full power of administration and legislation over the territory as an integral portion of the Union, and authorized the Mandatory to apply the laws of the Union to the territory, subject to such local modifications as circumstances might require. By the *Administration of Justice Proclamation*, 1919, the Roman-Dutch law as existing and applied in the Province of the Cape of Good Hope on the 1st January, 1920, was introduced as the common law of the territory, and all existing laws in conflict therewith were to the extent of such conflict repealed, except proclamations issued during the military occupation and in force on the said date, which continued to remain in force. Rights already accrued and liabilities already incurred were preserved. The effect of this proclamation was considered by the High Court in the cases of *Tittel* v. *The Master* (12th July, 1921) and *Collisons (S.W.), Ltd.* v. *Kruger and others* (2nd July, 1923), which laid down that Roman-Dutch law had been introduced into South West Africa, together with all the modifications which it had undergone in the Cape Province by desuetude, custom, judicial decision, and statute, whether abrogating or enacting. It was accordingly held, in the former of the cases mentioned, that the statutory law of the Cape Province relating to the execution of wills was the law of the territory, and in the latter case that the Cape law of prescription as contained in Act No. 6 of 1861 was also part of the law of the territory. Much of the statute law of the

Union has been specifically extended to the territory by proclamation, subject to amendments required by local circumstances. Amongst such statutes may be mentioned those relating to interpretation of laws, solemnization of marriages, insolvency, administration of estates, mental disorders, deeds registration, companies, bills of exchange, stamp duties, prisons, profiteering, rents, public health, immigration, pounds, liquor licensing, inquests, concealment of birth, protection of girls and mentally defective women, prevention of cruelty to animals, stock theft, diseases of stock, vagrancy, masters and servants, workmen's compensation, police offences, preservation of game, and usury. Certain portions of the German law (for example, that portion relating to mining) have been kept alive by express provisions in proclamations issued by the Administrator. A few Acts of Parliament of the Union apply directly to the territory; for instance, Acts Nos. 20 and 24 of 1922, 27 of 1923, 30 of 1924, and 42 of 1925.

The law in force in South West Africa includes, therefore, (i) the Roman-Dutch law, with the modifications it has undergone in the Cape Province as explained above; (ii) certain Union Acts of Parliament which apply directly to the territory; (iii) proclamations issued by the Administrator, some of which specifically introduce Union statutes; (iv) those portions of the German law which have been expressly preserved; and (v) those fragments of the German law which have survived by reason of the fact that they do not conflict with any of the laws already mentioned.

2. **Superior Courts.**—On the 1st January, 1920, military courts were abolished and civil courts established. A superior court, entitled the High Court of South West Africa, was created, consisting of a single Judge. It has its seat at Windhoek, but may be held at other places appointed by the Judge. In civil cases the Judge sits alone, but in criminal cases the court is composed of the Judge, who is president, and two other members, who must be either advocates or magistrates. The decision of the majority constitutes the judgment of the Court. There is no jury.

An officer, styled the Attorney General, has been appointed who, in regard to the prosecution of crimes and offences, possesses the powers of an attorney-general in a Province of the Union under section 129 of the *South Africa Act*. There are also a Registrar and a Master of the High Court, a Registrar of Deeds, and a Sheriff.

By Proclamation No. 38 of 1920, circuit courts were established, with a similar constitution to that of the High Court. The territory is divided from time to time into two or more circuit districts, in each of which two circuit courts are held annually.

An appeal from the High Court or from a circuit court, whether in the exercise of civil or criminal jurisdiction, lies to the Appellate Division of the Supreme Court of South Africa under the same circumstances and subject to the same conditions as an appeal lies from a Provincial Division of the Supreme Court of South Africa. In cases of an appeal from orders or judgments of the High Court or a circuit court upon application by way of motion or petition, or on summons for provisional sentence, or judgments as to costs only, or on civil or criminal appeals from a magistrate's court, special leave to appeal must first be obtained from the Appellate Division.

The law of procedure and evidence in the High Court and in circuit courts in civil cases is that of the Cape Provincial Division of the Supreme Court of South Africa, and in criminal cases that prescribed by the Union *Criminal Procedure and Evidence Act*, 1917, which has been extended and applied to the territory with certain amendments.

Rules for the conduct of proceedings in the High Court and circuit courts are framed by the Judge of the High Court, and subject to the approval of the Administrator.

3. **Inferior Courts.**—Magistrates' courts were also established on the 1st January, 1920, which have the same jurisdiction and observe the same procedure as the magistrates' courts in the Union. An appeal lies to the High Court of South West Africa from a judgment of a magistrate's court in the same circumstances and on like terms and conditions as an appeal may be had to a Provincial Division of the Supreme Court of South Africa from a magistrate's court in the Union. All sentences imposed by a magistrate's court of whipping or of fines exceeding £5 sterling or of imprisonment exceeding one month are reviewed by the High Court. The country is divided into eighteen magisterial districts, each of which is the area of jurisdiction of a magistrate's court. These courts are situated at the following places:—Aroab, Bethanie, Gibeon, Gobabis, Grootfontein, Karibib, Keetmanshoop, Luderitz, Maltahoehe, Okahandja, Omaruru, Ondonga, Otjiwarongo, Outjo, Rehoboth, Swakopmund, Warmbad, and Windhoek. Periodical courts are also held by magistrates at other places at regular intervals. There is no Rules Board as in the Union, but by Proclamation No. 1 of 1920, the judge of the High Court has been empowered to frame new rules and repeal and amend existing rules of magistrates' courts, subject to the approval of the Administrator.

Special justices of the peace have been appointed under Proclamation No. 25 of 1921 at Kalkfontein South, in the District of Warmbad; Narubis, in the District of Keetmanshoop; Seeis, in the District of Windhoek; Naosanabis and Steinhausen, in the District of Gobabis; Hofmeyr and Mariental, in the District of Gibeon; Gobabis, Grootfontein, and Luderitz.

Special justices of the peace have jurisdiction in criminal cases to impose a sentence of fine not exceeding £10 sterling and imprisonment not exceeding one month. Except in the case of juvenile offenders, special justices of the peace may not impose a sentence of whipping. All sentences imposed by special justices of the peace are reviewed by the High Court. Special justices of the peace have no jurisdiction in civil cases.

4. **General.**—The power to remit sentences is vested in the Administrator, except as regards death sentences, in which case the prerogative of mercy may be exercised by the Governor-General-in-Council of the Union. The official languages of the courts are English and Dutch. In criminal cases interpreters are provided in other languages free of charge, and in the High Court an interpreter in the German language is provided free in civil cases also.

By Proclamation No. 26 of 1920, provision was made for the arrest and surrender of fugitive offenders from adjoining territories. Provision was also made to enforce the attendance before the courts of such territories of persons resident or being within the territory and required as witnesses in either civil or criminal proceedings. By Act No. 24 of 1922 of the Union Parliament provision was made for the reciprocal service and enforcement in the Union and the territory of civil and criminal summonses, orders, warrants, and other processes of magistrates' courts and superior courts. Provision was also made for the removal of proceedings, whether criminal or civil, from a superior court in the Union to the High Court of South West Africa, and *vice versa*. The same Act provided that for all judicial purposes the port and settlement of Walvis Bay should be regarded as a part of the territory of South West Africa. That port and settlement has been included in the Magisterial District of Swakopmund.

5. **Principal Judicial and Police Officers.**—The following is a list of the principal judicial and police officers in the Territory :—

Judge of the High Court of South West Africa	Col. C. Gutsche, C.B.E., V.D., B.A., LL.B.
Registrar of the High Court, Taxing Officer, and Sheriff	J. D. M. Rosenow, B.A., LL.B.
Master of the High Court	J. P. le R. Esterhuysen.
Attorney-General	G. du Toit Voss, B.A., LL.B.
Divisional Inspector, South West Africa Police	Major C. A. B. van Coller, M.B.E.

6. **Admission of Legal Practitioners.**—Provision has been made for the admission of advocates, attorneys, notaries public, and conveyancers. The High Court may admit to practice as an advocate or attorney any person entitled to practice or to be admitted to practice as an advocate or as an attorney, as the case may be, in any division of the Supreme Court of South Africa. No person may be admitted to practice both as an advocate and as an attorney. Certain practitioners of the former courts of German South West Africa may also be admitted to practise as advocates or as attorneys. The High Court may also admit as an attorney any person who, after having passed the matriculation examination of any university in the Union of South Africa or an equivalent examination, has served with a practising attorney in the territory under articles of clerkship for three years, and has passed the examination in law and jurisprudence of the University of the Cape of Good Hope or an equivalent examination of another South African university, and who has also passed an examination in practice by three examiners appointed by the Court. Any person admitted to practice as an advocate or attorney by the High Court may also appear in any proceedings before a magistrate's court. The High Court exercises jurisdiction in respect of advocates, attorneys, notaries public, and conveyancers similar to that exercised by the Cape Provincial Division of the Supreme Court in respect of practitioners in the Cape Province. By Proclamation No. 32 of 1921, the Law Society of South West Africa was established.

7. **Prisons.**—There are at present eleven goals and eight lock-ups under the Prison Branch of the Administration. The gaols are classed as follows :—

1st Class—Windhoek.
4th Class—Luderitz, Keetmanshoop, Grootfontein, Outjo, Gobabis, Gibeon, Omaruru, Warmbad, and Swakopmund.
5th Class—Karibib.

The daily average of prisoners in the whole of the territory for 1924 was approximately 301, only a small percentage of whom were Europeans. Of this number 121 were at the Windhoek gaol, at which place all long-sentenced prisoners are concentrated, and the usual prison industries carried out. The local natives dislike sentences of imprisonment, and if possible pay a fine in preference. The recidivist is not the local native, but a native of the Union or other part of South Africa. Gaols and lock-ups are administered in accordance with the Union Prison Act (No. 13 of 1911), and regulations framed thereunder.

Generally speaking, the gaol buildings were not built on modern prison lines, being low structures without proper ventilation; while the sanitary arrangements were crude. Every endeavour has been made to place the gaols in a good sanitary condition, and to provide ample ventilation for the cells.

The number of convictions for breach of gaol regulations is very low, and only for minor offences such as being in possession of unauthorized articles, i.e. tobacco, matches, etc.

§ 9. Native Administration.

1. **Native Population.**—A census was taken in 1921 when the native population, which was partly enumerated and partly estimated, was returned as 177,482. This included estimates of those living in Ovamboland, the Kaokoveld, the Okavango, and the Bushmen on the north-eastern border, and as these persons are living under natural conditions, there is no reason to suppose that their increase has been otherwise than normal. In regard to those resident in the territory proper, i.e. inside the police zone, estimates by magistrates of the various districts show their number to be in the region of 81,823, which is a substantial increase on the census figures.

In the absence of birth and death statistics, an estimate of the population is unreliable, but as the natives, generally speaking, are living under healthy conditions, it may fairly be assumed that their numbers are increasing steadily.

2. **Native Labour.**—The increased activity in mining operations generally has created a great demand for mine labourers, and as the wages offered are higher and the conditions of employment more attractive than those which the farmer is able to provide, this activity has resulted in a marked shortage of labour available for pastoral and agricultural pursuits.

In the past, the labour supply for the mines was drawn from Ovamboland and the Okavango area in the northern portion of this territory, but the demand now far exceeds the supply, with the result that the diamond mines at Luderitz are now greatly dependent upon recruits obtained in Bechuanaland, Basutoland, and other parts of the Union, whilst the labour for the tin and copper mines inland is drawn, in the case of the former, from recruits obtained within the police zone and in the latter case from voluntary labour obtained from Ovamboland. The labour from the Okavango area is distributed amongst farmers and inland mining concerns as it has been found that these natives are unable to stand the rigours of the climate at the coast.

The chief employers of labour in the territory are the Railway Department, the Chamber of Mines at Luderitz, the Otavi Copper Mining Company in Tsumeb, the South West Company, and the various tin mining companies in the districts of Omaruru and Karibib. They employ both skilled and unskilled labourers, derived to some extent from local sources, but for the most part from Ovamboland and the Okavango area.

In Ovamboland, the Okavango, Windhoek, Tsumeb, and Luderitz officers have been specially appointed for the purpose of native administration, whilst in the country districts the control is vested in the magistrates.

3. **Native Law.**—The main provisions of the native law, apart from those dealing with masters and servants, which is practically the law as it exists in the Cape Province, in areas which have been opened up for settlement of Europeans, are embodied in the following enactments :—

(*a*) The Native Administration Proclamation, which supersedes many of the old German laws and constitutes the principal pass law, regulating as it does the movements of natives within the territory and of those desirous of leaving or entering it. This Proclamation also provides for the exemption of natives under certain conditions from the carrying of passes, and contains provisions for the establishment of reserves and the control of natives therein and on farms. The pass laws are not applicable in purely native areas such as Ovamboland, nor in the Rehoboth District. The Native Labour Proclamation, 1917, applies more particularly to the control and welfare of natives working within mining areas.

(*b*) The Vagrancy Proclamation, which provides for the suppression of idleness and trespass. Natives are allowed to select their own masters, and strict instructions have been issued against forcing natives to take service with particular masters against their will. When a native is dilatory in finding employment, an employer can be indicated, and if he refuses to engage himself, he can be prosecuted under the *Vagrancy Act*. Before sentencing natives under the Vagrancy Laws, magistrates are required to give the offender an opportunity of taking employment in preference to undergoing imprisonment. Certificates of exemption from labour may be granted to natives having visible means of support, such as possession of stock. Persons unfitted for labour by reason of old age or physical infirmity are *ipso facto* exempted persons

(*c*) The Municipal Proclamation, which empowers municipalities, *inter alia*, to make regulations, subject to Government sanction, for the control and management of native locations within their respective areas.

(*d*) The Natives' Stock Brands Proclamation, which provides for the branding and registration of their large stock, frees natives from the liability of having to purchase branding irons. Under this Proclamation these irons are supplied by the Administration and are in the custody of prescribed officials under whose supervision the stock is branded.

(*e*) The Native Reserve Trust Fund Proclamation which provides for revenue collected in reserves, being spent entirely in the interests of the natives resident in the reserves concerned.

(*f*) The Urban Areas Proclamation, which adopts all the main provisions of the Union *Natives (Urban Areas) Act* of 1923, and omits only those which are not applicable to the conditions obtaining in the territory and which have been applied to the town of Windhoek and the port of Walvis Bay.

4. **Liquor Prohibition.**—In order to secure the advancement of the native, and to prevent as far as possible his lapsing into crime, it is forbidden to place in the care of, or give, sell, or deliver to any coloured person any intoxicating liquor except for medicinal purposes on the production of a prescription from a qualified medical practitioner. It is further unlawful for a master to give his servant "tots" of liquor, as is also brewing of kaffir beer without permission.

5. **Native Reserves.**—With a view to the reconstruction, as far as practicable, of tribal organization and the provision of areas in which the natives may live under healthy and natural conditions together with their stock, reserves have been established in various districts. These are generally controlled by the hereditary chief, if any, or an elected or appointed headman, who is responsible to the magistrate of the district for the preservation of law and order in and about the reserve. In some instances, European superintendents have been appointed for the purpose of closer supervision of the reserves. This system of native administration can be said to serve a double purpose, in that it ensures a settled, contented population, and creates a potential labour-recruiting field for the future. All the areas selected for native reserves have existing water supplies, but, as these are not conveniently distributed and, in some cases, insufficient, boring operations upon a considerable scale are being undertaken. It is the policy of the Administration to provide adequate supplies before finally proclaiming any such area as a reserve.

Purely native areas such as Ovamboland and those secured by old treaties have not been disturbed, whilst various additional reserves have been provided, subject to conditions proving suitable and, if not, alternative areas have been provisionally set aside.

The movement of natives and stock from and to various places in connexion with the foregoing policy makes it difficult to obtain reliable statistics as to their numbers.

The following native reserves have been proclaimed:—

NATIVE RESERVES IN SOUTH WEST AFRICA.

District.	Name.	Extent.	By Whom Occupied.
(*a*) LAND OCCUPIED BY NATIVES UNDER GERMAN TREATIES.			
		Hectares.	
Keetmanshoop	Bersheba Hottentot Territory	575,000*	Bersheba Hottentots.
Warmbad	Bondeis Reserve	174,505	Bondelzwarts.
Omaruru	Bergdamara (Okombahe)	172,780	Bergdamaras.
Outjo	Zessfontein	31,416	Topnaar and Swartbooi Hottentots.
Outjo	Fransfontein	36,188	Zwartbooi Hottentots.
Bethanie	Soromas	8,212	Bethanie Hottentots.
(*b*) RESERVES ESTABLISHED UNDER SECTION 16 OF THE NATIVE ADMINISTRATION PROCLAMATION, 1922.			
		Hectares.	
Malthohe	Neuhof	20,500	Various Tribes.
Keetmanshoop	Tses	229,925	Hottentots, Hereros, and Damaras.
Okahandja	Ovitoto	47,791	Hereros.
Grootfontein	Otjituo	105,768*	Chiefly Hereros.
Gobabis	Aminius	230,000*	Bechuanas and Hottentots.
Gobabis	Epukiro	178,000*	Chiefly Hereros.
Otjiwarongo	Waterberg East	311,000*	Hereros and Damaras.
Gibeon	Gibeon Reserve	38,782	Witbooi Hottentots.

* Approximate.

NOTE.—Ovamboland and certain areas along the Okavango River and in the Kaoko-eld are native reserves.

§ 10. Land and Irrigation.

1. **Land Settlement.**—The following statement relative to the ownership of land in the territory (exclusive of Ovamboland and the Caprivi-zipfel) has been prepared from the returns issued by the Surveyor-General of the previous German Government :—

LAND OWNERSHIP IN SOUTH WEST AFRICA, 1912–13 TO 1913–14.

Description.	Area.	
	1912–13.	1913–14.
	Acres.	Acres.
Total Area	206,245,000	
Government Land	150,888,491	150,931,946
Government Land suitable for Farmers	121,273,727	121,365,806
Native Land (including Bastard Gebied)	7,190,170	7,146,715
Land Held by Companies	29,609,970	30,021,126
Land held by Companies suitable for Farms	21,932,172	21,932,222
Land Sold—		
Government Land, 1,120 Farms	28,377,830	29,369,743
Native Land, 56 Farms	1,490,561	1,635,953
Company Land, 71 Farms	1,144,571	1,345,515
Land Leased—		
Government Land, 82 Farms	1,371,265	1,697,809
Native Land, 7 Farms	167,219	68,419
Company Land, 49 Farms	1,635,140	1,101,919
Land Available for Sale and Lease—		
Government	83,066,078	81,901,562
Native	5,557,090	5,442,344
Company	19,152,010	19,484,788
Surveyed Government Land available for Lease	(614 Farms)*	(709 Farms)*
Government Land Reserved, 297 Farms	8,458,552	8,396,693
Native Reserves—		
Bondelswartz and Hottentots	432,250	432,250
Berg Damaras	424,840	425,581
Game Reserves	21,693,763	21,693,763

* Extent not known.

Of the 1,331 farms (representing a total of 33,082,206 acres) which were in private possession within the territory on the 1st April, 1913, 1,138 farms are being developed. The area of the 193 undeveloped farms is 4,642,555 acres (i.e. 14·03 per cent. of the total area). There were also 337 closer settlement holdings, having an area of 9,230 acres. These holdings are situated in selected lands at Okahandja, Omaruru, Waterberg, Gobabis, Gibeon, and Keetmanshoop. The prices for these holdings varied from one-half to one pfennig per square metre, according to the quality of the land. Of the 337 holdings, 180 (having an area of 1,748 acres) are uncultivated. A land tax is leviable on all landed property, rural and urban, and has yielded about £15,750 per annum. The land tax is still being collected from owners of land in the territory in accordance with the German Ordinance.

Crown lands in the territory are now being disposed of under the Union *Land Settlement Act*, 1912, as amended by the Act of 1917 and the *Land Settlement Acts Amendment Act*, 1920 (Union), as applied to the territory by Proclamation No. 14 of 1920, as amended.

Under this Proclamation land is from time to time advertised as available for settlement purposes by notice in the official *Gazette* and in newspapers circulating in the territory and Union. The farms are advertised for eight weeks, after the expiry of which period all applications are considered by the Board.

During the twelve months ended 31st December, 1921, 245 farms were allotted ; of these 39 were surrendered and withdrawn. Up to 31st December, 1923, 662 farms were allotted ; of these 128 were surrendered or cancelled during the same period.

It is advisable that intending settlers should be possessed of a capital of from £1,000 to £2,000.

The Administration is prepared to assist approved settlers by advances for—

(1) The building of a dwelling-house ; the maximum amount that can be advanced under this heading is £400.

(2) Boring for water or for the construction of wells and dams.

(3) The purchase of stock. Under this heading the maximum advance for the purpose is £750. Remission of rent for the second and third years of a settler's operations may be granted, where a settler has effected improvements of a permanent nature to the value or 10 per cent. of the prairie value of the holding allotted to him.

The Administration is also prepared to consider applications from persons or companies desirous of ranching on a considerable scale, and for this purpose a few ranching blocks have been advertised. The size of these ranches will depend largely on the districts in which they are situated, but it may be taken that each ranch will comprise approximately six ordinary farms. It is doubtful whether any such ranches will be advertised in the southern districts of the territory. The conditions under which the ranches will be allotted will be similar to those in force in the Transvaal, and will provide *inter alia* for occupation by representatives of the allottees, and the stocking of each ranch with a prescribed number of stock.

Crown land values range from 1s. to 6s. per hectare ($2\frac{1}{10}$ acres) according to quality and locality.

Inquiries should be addressed to the Senior Officer, Lands Branch, Windhoek, S.W.A.

2. **Water Supply and Irrigation.**—Generally speaking, the territory, which is essentially a cattle-raising country, depends for its water supply on subterranean streams, of which there are a good number in all parts of the country. The cattle farmers, therefore, mainly adopt the method of sinking wells and boreholes in order to obtain water for their stock. Along the Auob River Valley, in the Gibeon district, and on the farms on the joint Nosob River, lying between the parallels 22° and 23° south in the Gobabis district, there are a number of artesian boreholes sunk in the Karroo formation. Water is usually found on layers of sandstone, between beds of shale. The depths of the artesian holes vary from 250 to 530 feet, and the minimum and maximum yields from this source are from 90,000 to 1,000,000 gallons per diem. These boreholes are under control, and water can be shut off when not required.

Although the river system is not inconsiderable, it does not form a reliable water supply, since the rivers, with three exceptions, are intermittent, and are always dry in the winter. The following are the chief rivers :—

The Orange River, which forms the southern boundary, is perennial. Its northern bank, however, is so mountainous that practically no land is available for irrigation purposes.

The Kunene, on the northern border, is also perennial, and capable of being turned to good account if some of its waters were diverted and conducted along the Omarumbas leading into the Etoscha Pan.

The Okawango, on the north-eastern boundary, is also perennial, and flows into the Zambesi. From the point of view of irrigation it is of very little use to the territory.

The Fish River has its source in the southern portion of the highlands, and, with its tributaries, drains the whole south central plateau.

The Nosobs, with their tributaries, the Schaap, the Elephant, and the Auob, make their way to the south-east, and finally join the Malopo somewhere between the 20° and 22° east longitude and 26° and 28° south latitude.

The Chapman River has an easterly course, and is finally lost in the Kalahari.

The Epikuro River, and the Eiseb, are said to flow into Lake N'Gami, although it is possible that they also disappear into the sands of the Kalahari.

The Omatako, with its many tributaries, has a more northerly course, and divides at Otjitu-o, one branch turning due east and being finally lost in the desert, and the other branch entering the Okawango near Kanganga.

The *Ovambo Omuramba* has its source somewhere near Blockfontein on the Omatako, and flows west into the Etoscha Pan, this being the only water-course whose flow is not lost to the territory.

From historical accounts of the territory by the explorers Alexander, Galton, and Anderssen, it seems that not very long ago the water supply in this country was much more abundant than at present, and it is known that the country is undergoing a process of desiccation in so far as open water is concerned. How to prevent the enormous waste of open water which is at present going on is a problem to be dealt with in the future.

The construction of dams on a large scale but of moderate size and cost will very greatly assist in this direction. Surface water will not only be preserved, but subterranean water supplies should also benefit. During the dry years of 1921 and 1922 conclusive proof was available that the subterranean water-table in many localities was sinking.

The abundant rains have had a beneficial effect on the underground water supplies as a whole. The subterranean water-table in South West Africa lies at a considerably greater depth than in other parts of the Union, the average depth of boreholes being 270 feet in this territory against 150 feet in the Union. The supplies obtained are in almost every case permanent and can be relied upon to supply the required quantity during the whole of the dry season. The development of subterranean water supplies is being continued to the fullest extent and every endeavour is made to provide each farm with an adequate and efficient supply of water.

Forty-eight boring machines were in commission at the end of 1924. The following table gives the total footage drilled and the yield obtained in recent years :—

WATER-BORING OPERATIONS, 1920-21 TO 1924-25.

Year.	Boreholes Completed.	Boreholes in Progress at end of year.	Aggregate Depth.	Yield per Diem.
			Ft.	Gals.
1920-21	15	9	4,730	217,000
1921-22	68	30	23,344	1,981,000
1922-23	143	41	40,747	6,036,700
1923-24	167	51	53,983	8,962,400
1924-25	246	48	70,767	6,943,445

3. **Rainfall.**—The rainfall of the various districts in the territory does not, owing to its uncertainty, form a reliable water supply, and this fact is one of the main obstacles to the extension of agricultural pursuits. Generally speaking, the rainfall increases from south to north and from west to east. The maximum amount of rain falls accordingly in the north-eastern area, and the minimum rainfall is found in the south-west. The heaviest precipitation takes place during the summer months from December to February over the northern area. In the south, on the other hand, winter rains have been experienced. The rainfall statistics for the various districts are given hereunder :—

(i) **RAINFALL STATISTICS IN TERRITORY, 1920-21 TO 1924-25 (in Inches).**

Locality.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.
Warmbad	4·14	1·33	9·08	2·62	4·25
Luderitz	2·47	0·53	1·92	0·44	0·75
Aroab	9·30	5·21	10·18	7·44	11·23
Keetmanshoop	7·78	3·11	11·41	6·73	8·93
Bethanie	5·39	3·46	10·65	1·52	9·62
Gibeon	14·21	1·99	16·39	3·42	9·15
Maltahoehe	11·11	3·32	19·42	1·79	7·42
Rehoboth	13·60	3·44	28·64	7·61	21·10
Gobabis	15·60	7·95	21·19	11·63	19·00
Windhoek	16·44	6·63	29·48	9·71	21·03
Swakopmund	1·24	0·01	1·50	0·82	0·72
Okahandja	14·18	7·00	25·47	6·82	25·97
Karibib	13·02	2·50	17·56	3·15	11·34
Omaruru	14·76	5·80	15·21	7·44	20·16
Otjiwarongo	16·76	6·42	19·70	12·56	23·76
Outjo	21·51	8·20	16·21	10·80	25·69
Grootfontein	28·56	11·99	35·50	13·72	34·70
Tsumeb	24·48	10·80	24·26	14·46	37·70

(ii) **AVERAGE RAINFALL, 1898 TO 1924 (in Inches).**

Locality.	Yearly Average.		Locality.	Yearly Average.	
	1898 to 1908.	1909 to 1924.		1898 to 1908.	1909 to 1924.
Outjo	13″	8″	Windhoek	13½″	13″
Grootfontein	22″	23½″	Rehoboth	9½″	10″
Omaruru	15″	11″	Maltahoehe	6″	6″
Okahandja	15″	13¼″	Gibeon	6¼″	9″
Gobabis	16″	16″			

4. **Concession Companies.**—In December, 1919, a Commission was appointed to inquire into the titles of several companies which had extensive rights in the territory. The Commission reported in September, 1920, and Proclamation No. 59 was issued on 17th November, 1920, by which many of these rights were cancelled.

The general effect was to put an end to certain large mining monopolies and throw the whole country open to prospecting. Two companies lost large land holdings.

§ 11. Agriculture and Fisheries.

1. **Agricultural Conditions.**—The climatic conditions prevailing in the territory are not generally favourable for the pursuit of agriculture. In the north, where the average rainfall is about 22 inches, crops of maize, potatoes, pumpkins and beans are raised; but as the rainy season is usually of short duration, the heat excessive, and the frost early, such crops cannot regularly be relied upon. As illustrating this, it may be mentioned that from the above source about 8,000,000 lb. of maize were purchased in 1917 by the Administration for horse fodder, only 2,200,000 lb. in 1918, owing to the fact that no more was available, and none in 1919 owing to the failure of the crops as the result of early frosts.

Further south, along the banks of the Black and White Nosob Rivers, where the average rainfall is about 15 inches, similar crops, though not as large as those in the north, have been raised; but these also are uncertain, as they are entirely dependent upon the rains. Still further south along the bed of the Auob River are several artesian wells with a pressure sufficient to raise the water to a height of thirty feet, and so enable the lands on either side to be placed under irrigation. A great deal has been done in this direction lately, and there are great possibilities in the way of wheat crops.

The following figures give the results of an agricultural census taken in 1924:—

No. of Farms	1,650		Wheat	1,023,400	lb.
Area Irrigated	1,561	morgen.	Maize	1,563,600	,,
Area Irrigable	7,510	,,	Oats	—	
Area Cultivated	12,567	,,	Kaffir Corn	175,600	,,
Area under Crops	12,351	,,	Potatoes	580,500	,,
Wheat-growing Area	568	,,	Tobacco	130,600	,,
Maize-growing Area	9,241	,,	Beans	136,300	,,
			Lucerne	153,000	,,

No. of Fruit Trees 36,940
Vineyards: No. of Vines 57,800

2. **Pastoral Production.**—In regard to pastoral products, the territory is not only self-supporting in regard to beef and mutton, but is now, and has been for years past, a source of supply of cattle and small stock for the meat trade in the Union. Other products, such as skins, hides, horns, wool, mohair, and ostrich feathers, showed a steady increase for the period 1909 to 1913, up to which year statistics are available; and, with the opening up of this country to settlers, there is not the slightest doubt that this increase will be maintained. The whole of the territory, with the exception of the coastal belt, is admirably suited for pastoral pursuits. From Gibeon south to the Orange River the country lends itself almost entirely to small stock farming. By far the greater number of small stock consists of Africander and bastard sheep, which thrive exceedingly well, though Angora goats and merino sheep are also farmed successfully. The middle portion of the territory is suitable for Karakul sheep. The flock of Karakul sheep on the experimental farm Neudamm is perhaps the largest and most valuable in South Africa. The Karakul industry is receiving the careful attention of the Administration, as it is from this branch of farming, if conducted on scientific lines, that great development may be expected. This, and the northern portion of the country, is ideal for cattle farming. It is covered with bush and trees, which afford shade for stock in summer and shelter from the cold winds in winter. The climate is good, and there is a plentiful supply of various grasses, the majority of which are sweet, nourishing, and drought-resisting, so that, when once the unlimited supply of underground water is tapped by boring, the country is destined in all probability to become the finest cattle-ranching portion of South Africa. In addition to this, it is remarkably free from stock-diseases and tick-borne pests. Ticks, however are on the increase and the dipping of cattle will have to be considered.

The common diseases affecting stock are horse-sickness (during certain seasons only and mostly confined to the northern districts), and dourine in horses (which is, however, not common in this territory, and is being rapidly eliminated); anthrax and blackquarter in cattle; and scab, wire-worm and, at times, blue-tongue, amongst sheep.

The German Government encouraged horse-breeding, and established a number of studs, but the tendency now is to take up cattle farming, as this has been found to be the more profitable. In this connection it may be mentioned that the Government assisted the farmer by introducing pure-bred cattle from Europe, with very beneficial results, as it was found that the imported breeds readily acclimatized, throve as well as the indigenous stock, and matured more quickly. This accounts for the fact that the class of cattle as a whole is of a superior grade. The present Administration has imported a number of pure-bred stock from the Union for sale to farmers on easy terms. It has acquired a thoroughbred stallion for service of farmer's mares.

Ostrich farming may now be regarded as non-existent. In 1911 the late German Government established an ostrich-breeding farm at Otjituesu, about 35 miles from Windhoek. The original stock, comprising 23 breeding birds, was obtained from the Cape Province,

and a Cape farmer was appointed manager. In 1913 there were 132 birds on the farm; but during the recent hostilities these escaped, and have since become wild—a fact which possibly accounts for the splendid plumage occasionally seen on wild birds in this part. The territory as a whole may be regarded as the home of the wild ostrich.

3. **Statistics.**—The following figures represent the results of a live stock census taken at the end of the year 1924:—

Cattle	566,912	Woolled Sheep	43,620
Horses	20,387	Karakuls	103,300
Mules	1,983	Other Sheep	861,592
Donkeys	36,490	Angora Goats	15,719
Pigs	6,132	Other Goats	932,476

During the year 1924, 30,709 head of cattle and 159,755 sheep and goats were exported to the Union.

The following are the details of the cattle exports:—

CATTLE EXPORTS FROM SOUTH WEST AFRICA DURING THE YEAR 1924.

To Union by rail and road	30,709
To Europe by sea	763
To Angola by land	1,944
TOTAL	33,416

4. **Forest Resources.**—Strictly speaking, there are no forests in the country; nor has any forestry been undertaken by the late Government on such a scale as to call for remark. Belts of *Camel Thorn* are to be found throughout the territory north of Rehoboth, whilst north of Grootfontein, *Tambootie* and *Syringa* grow in large patches, and west thereof *Mapani* predominates. South of the River Huab, in the District of Outjo, large numbers of *Camel Thorn* grow, whilst north of this river broad strips of *Mapani* are to be found. In the District of Gobabis are strips of *Camel Thorn*, and along the water courses *White Thorn* grows profusely, whilst the sand dunes are thickly studded with *Yellow Wood*. Besides all these above-mentioned, and in the areas referred to, are to be found *Marula*, *Dolf*, *Deurmekaar*, *Wild Fig*, *Wild Orange*, *Olijvenhout*, *Ebony*, and other varieties, all of which could be turned to good account in making mining props, furniture, wagon parts, and for other purposes. The German Government seems to have contented itself with establishing experiment gardens for exotic trees at various centres, and these supplied official and private requirements. These trees were of the decorative sort, and comprised *Blue Gums*, *Pepper*, *Pine*, *Prosopsis*, and *Jacaranda*.

5. **Fisheries.**—The fishing industry in the Territory, with the exception of whaling, has not yet been exploited to any extent. With regard to the supply of fresh fish, the distance from the coast to any markets of consequence presumably deters any outlay of capital in exploiting this industry. There are, however, a considerable number of crayfish in the vicinity of Luderitz, and four canneries have been established there. During the last four years, several cutters engaged in catching *Snoek* have made their headquarters at Walvis Bay, and although no statistics are available, it is known that they have met with considerable success, and have made large profits. The fish is dried and sent to Cape Town for disposal. Before the war, well-equipped whaling stations were established at Walvis Bay and Luderitz. The Walvis Bay Whaling Company resumed operations at Walvis Bay in 1923.

Sealing has been carried on at Cape Cross since 1922.

§ 12. Mines.

1. **Exploration.**—The territory was but little explored up to the middle of the last century. Before this time, setting aside the activities of the missionary Von Schmelen (referred to in §1), only the English traveller Alexander had penetrated (in 1836–37) as far as the lower and middle Kuisib River, which for a long time afterwards remained unvisited by any European. Later on, the explorations of Galton and Chapman in 1866, and of the Swedish hunter Anderssen in 1855, extended the information then to be had regarding the Protectorate. Missionaries, English traders, and hunters afterwards entered the Protectorate, and there is no doubt that during their travels they searched for mineral deposits. This fact is proved by the number of English names borne by mines mentioned on the older maps of the country, *e.g.* the Sinclair Mine (North and South), the Stanley Mine, the Campbell Mine, the Palgrave Mine, the Matchless Mine, the Hope Mine, the Pot Mine, and the Ebony Mine.

2. **Mining Companies.**—As soon as some appreciable information of the country was gained, capital from the Cape Colony, as well as from the former Republics of the Transvaal and the Orange Free State, was invested in prospecting and exploring work in the territory. Companies such as the Matchless Estate and Mining Association, the Kharaskhoma Syndicate (now South African Territories, Ltd.), the Great Western Syndicate, the Otjimakoko Gold Mining Company, the Omaruru Gold Mining and Exploration Company (I. W. Stanley), the Great Oasis Syndicate, the Great Namaqualand Exploration Company, and the Walvis Bay Copper Company, were formed. In addition, a few German concerns, viz., the Lilienthal Syndicate, the Deutsch Afrikanische Minen-Gesellschaft, and others commenced working.

At the time of, and since, the annexation of the country by Germany, the greater part of it was held by large companies holding concessions in regard to mining rights.

These were :—

(1) The Deutsche Kolonial-Gesellschaft in the west, along the coast from the Orange River to the southern boundary of the Kaokoveld, the Ugab River;

(2) The Kaokoland-und-Minen-Gesellschaft, from the Ugab River to the northern border (Kunene River);

(3) The South African Territories, Ltd., in the south-east, *i.e.* the areas of the Hottentot tribes known as the Bondelswartz, Veldschoendragers, and the Zwartmodders.

(4) The Hanseatische Minengesellschaft in the centre of the country, *i.e.* the area of the Rehoboth Bastards and of the Khauas-Hottentots;

(5) The South-West Africa Company, Ltd., with their offshoots, the Otavi Mines and Railway Company and the Otavi Exploring Syndicate, Ltd., in the north, in Damaraland, and Amboland.

Only in a few stretches between the areas held by the companies were the mining rights held by the Government.

Some of these companies did not permit any prospecting, while others allowed prospecting only under difficult conditions. Only in 1908 the Deutsche Kolonial-Gesellschaft, and in 1913 the others, with the exception of the South-West Africa Company, accepted the Imperial Mining Ordinance of 1905, and granted general freedom of prospecting and mining in their respective areas. It can be understood that, owing to the want of uniformity of mining laws, the opening up of the mineral resources was greatly hampered throughout the territory. Further impediments arose through the various native rebellions, and the Herero War, which lasted from 1904 to 1907. In November, 1920, the mining rights of these companies were cancelled and the provisions of the Imperial Mining Ordinance of 8th August, 1905, as amended by Proclamation No. 24 of 12th December, 1919, were applied without modification or restriction throughout the whole territory.

Whilst in the Union many official mining geologists, private geologists, and skilled miners have done valuable exploring and prospecting work for decades, not much could be done in the territory in this direction, as it was only since 1907 that two official geologists were employed. In addition, there was not the right stamp of skilled prospector. Owing to the barren and waterless nature of large portions of the country, such as the Namib desert, parts of the Kaokoveld, the Caprivi-zipfel, the Sandveld, and the Kalahari, vast areas have not been prospected at all. Nevertheless, comparatively speaking, a great deal of prospecting has been done, and encouraging results have been obtained, particularly in regard to copper (with zinc and lead), diamonds, tin, vanadium, and marble.

3. **Copper.**—Copper can be traced throughout the whole country, from the Orange River in the south to the Grootfontein District in the north. It has been worked on a large scale only in the vicinity of Grootfontein and Tsumeb. This district was at one time held by the Hereros, a pastoral tribe of the Bantu race, who allowed the Ovambos to come from the north and work the copper deposits. In other areas, also, copper ores appear to have been extracted in early days by natives of unknown race. Similarly at Otjosonjati, in the centre of the Herero-land, heaps of slags of smelted copper ores were found beneath the roots of old camelthorn trees.

Not much later than 1852, when copper ore commenced to be exported from Springbokfontein, similar ores began to be exported from the territory. In the sixties of the last century, the Walvis Bay Copper Company extracted the very rich copper ores from the Matchless Mine (which penetrated down to water-level), south-west of Windhoek, and sent them via Walvis Bay to England.

Only one company, the Otavi Minen-und-Eisenbahn-Gesellschaft, produces copper at present. This company is working the mines at Tsumeb, Asis and Guchab, all of which are in the Grootfontein district. The output amounted to 122,823 tons in 1924, and averaged 13 per cent. copper, 23 per cent. lead, 6 per cent. zinc, and 6 ounces per ton silver. Lower grade ores are smelted on the property, the resultant copper lead matte having an average content of 50 per cent. copper. The Otavi Exploring Syndicate, Ltd., of Grootfontein, holds several small copper mines, but has recently restricted its operations to the exploitation

of vanadium ores. The Khan mine, which lies in the valley of the Khan, one of the tributaries of the Swakop river, has been elaborately equipped with plant, and fairly well developed. It produced for some time during the war, but had to be closed down in the beginning of 1918, owing to the fall in the price of copper and the increase in working costs.

Many other copper mines, such as Otjosonjati, Gorob, Matchless, Pot, Sinclair, Ehlers, Henderson, and Ida have been worked, and in some cases under adverse circumstances. Possibly they will be restarted if the price of copper rises and market conditions improve.

The copper ore exported in recent years was as follows :—

EXPORTS OF COPPER ORE, 1921 TO 1924.

MINES.	1921.		1922.		1923.		1924.

4. **Diamonds.**—In the early days of the German annexation, pipes were discovered at Gibeon, Berseba, Maltahoehe and Keetmanshoop, Great Bruckaros, Hanaus, Groendoorn, Amalia, Freistadt, and Rietkuil, which were exploited by prospectors without result. Rumours of occasional finds of diamonds, as when a native was supposed to have found a stone of $2\frac{3}{4}$ carats near Berseba, and three small stones at Amkub, 55 miles W.S.W. of Gibeon, induced German capital to invest in the formation of a company to exploit the pipes. The Gibeon Schürff and Handelsgesellschaft obtained a concession for the exclusive right to prove the pipes in the Gibeon, Berseba, and Kub areas. This concession was abandoned, and in June, 1909, the areas were thrown open for pegging. The pipes were prospected systematically. The concentrates contained garnet, eclogite, diopside, ilmenite, olivine, augite, mica, diallage, zircon, bronzite, and enstatite. The work of the company in testing the blue ground proved it to be kimberlite; but, unfortunately, the main constituent, viz., the diamond, was absent.

In May, 1908, a few small diamonds were found near the railway at Kolmanskop station. Further investigation showed that there were very extensive marine and eluvial or residuary deposits in narrow strips along the coast from Bogenfels, south of Luderitz, to Conception Bay (south of Walvis Bay), all of which carried diamonds. Several companies were floated, and up to the commencement of the war diamonds to the value of about £8,500,000 were obtained by them. At the end of 1915, nine of the companies were allowed to resume work, subject to some restrictions. These companies, with their 1918 and 1919 production in metric carats, are shown in the following table :—

DIAMOND PRODUCTION, 1918 AND 1919.

	1918. Carats.	1919. Carats.
Pomona Diamanten Gesellschaft.....	136,065	187,964
Koloniale Bergbau-Gesellschaft M.B.H.....	79,552	110,041
Deutsche Diamanten Gesellschaft.....	63,945	73,188
Kolmanskop Diamond Mines, Ltd.....	43,293	43,685
Vereinigte Diamant Minen A.G.....	25,199	24,262
Diamanten Actien-Gesellschaft.....	10,499	9,696
Diamanten Abbau-Gesellschaft.....	6,041	7,816
Luderitzbuchter Bergbau Gesellschaft.....	4,680	1,149
Bahnfelder Diamant Gesellschaft.....	2,865	1,095
South-West Diamonds, Ltd.....	—	3,284
TOTAL.....	372,139	462,180

Since 1920, the rights of these companies, except the Kolmanskop Diamond Mines, Ltd., and the South West Diamonds, Ltd., have been acquired by the Consolidated Diamond Mines of South West Africa, Ltd., of Capetown.

The yearly output and value of diamonds from South West Africa during the period from 1909 up to the end of 1924 was as follows :—

PRODUCTION AND VALUE OF DIAMONDS, 1909 TO 1924.

Year.	Diamonds Received (Carats).	No. of Diamonds per Carat.	Diamonds Sold (Carats).	Price Realized per Carat.	Total Value.
				s.	£
1909–10	560,977	5·0	560,977	29·83	836,000
1910–11	798,865	5·75	798,865	26·775	1,069,000

* Value estimated by L. Herz. † Part of 1920 production. § Estimated.

5. **Tin.**—Tin ore (cassiterite) was discovered in 1908. German prospectors were the first in the field, but did not get much support locally or in Germany. They then applied to the Cape, where various syndicates were floated to explore the claims. The Anglo-German Tins, Ltd., the De Beers Company, the Ameib Tin Company, the Tin Lands, Ltd., the South-West Africa Co., Ltd., the Otavi Exploring Syndicate, the Kolonial und Handelsbank, and the Hanseatische Minengesellschaft acquired claims from a number of small prospectors. The surface area is considerable. The largest area stretches east and south-west from the (granite) mountains of the Erongo, along the line Otjimbojo-Okawayo-Etiro-Onguati-Ameib-Davib to Spitzkop. There is a second area to the west of Okombahe (Nomtsaub, Aubinhonis, Neineis), and a third to the east of the Brand mountains.

The extraction of tin from alluvial gravels and detritus has been attended with fair success over considerable areas, in spite of the very wasteful methods of recovery adopted. The very low price of the metal considerably damped enthusiasm and enterprise for a time, but with improved conditions a large advance in production from this source may be confidently anticipated. The all-important question is that of the possible value of the innumerable tin-bearing pegmatite lodes that traverse the above areas. Most of these would undoubtedly prove quite unpayable under any circumstances, but it is hoped that some of the remainder when properly developed and tested will be found to provide the basis of a permanent tin industry. Some of the later discoveries such as those around the Paukwab mountain and in the Erongo mountain are considered particularly promising.

The following was the output from the year 1915 :—

EXPORTS OF TIN ORE, 1915 TO 1924.

Year.	Quantity.	Value.	Year.	Quantity.	Value.
	Tons.	£		Tons.	£
1915	7·8	685	1920	166	33,200
1916	28	3,333	1921	104·4	10,950
1917	94·3	12,518	1922	259·7	28,860
1918	74·2	11,130	1923	233·3	34,995
1919	113·5	20,370	1924	209·3	31,399

6. **Marble.**—Between Swakopmund and Karibib extensive occurrences of marble are met with, which will be of increased value now that a direct route has been opened to the Union. White and coloured marble in fine quality was quarried at Karibib by the Afrika Marmor Kolonial Gesellschaft. Machinery has been erected, and railway connexion with Karibib has been opened. The stone should be greatly sought after for architectural purposes. It can also be used to a large extent by furniture makers. The marble will not, however, be of any use for statuary work. The value of the exports from 1911 to 1913 amounted to £2,512. In 1914, up to 30th June, 600 tons, to the value of £4,000, were exported. Since the outbreak of the war, no export has taken place.

The rights held by the Afrika Marmor Kolonial Gesellschaft were acquired by the S.A. Marble Company, Limited, in 1924.

The occurrence of a beautiful white greenish onyx-marble has been noted in a ravine of the Guchab-East-Mountain in the Otavi Valley. It has not yet been tested as regards payability.

7. **Gold.**—Gold ores have been discovered at many places in the territory. At Ubib, Husab, Kunjas, the Chuos Mountains, Ussis, Henderson Mine, Ehlers Mine on Aukab Farm, Buchholzbrunn, Churutabis, Kl. Kharras Mountains, Heirachabis, Kanus, Albrechts, Komandibmund, Spitzkop, near Rehoboth and Kuibis, prospecting for gold has taken place during the years preceding the war, but without satisfactory results. At Chorichas and Choabendus (Kaokoveld) the indications were considered such as to make it advisable to continue investigations. These were interrupted by the war. South of the Otavi Valley, quartz-conglomerates have been discovered, alleged to be similar to the Rand gold quartzes, and to belong to the same geological series. At Swartmodder and Natas (Rehoboth District), pegmatite veins have been found bearing scheelite and gold, the main value, however, being the scheelite.

A number of quartz and quartzite reefs have been pegged near Oudundu-Otjiwapa, Omaruru District; the values of the reefs have not as yet been properly examined; but some prospectors, at the end of 1924, commenced working the alluvial deposits in the vicinity; the output in 1924 being 147 ounces.

8. **Coal.**—As the stretch of country between the Fish River in the territory and the eastern boundary is very similar in its formation to the Karroo formation in the Union, where remunerative coal beds are found, the late German Government reserved an area of 14,000 square miles near Gibeon in which prospecting for coal was forbidden. The Government, in order to test this area in a more thorough manner than a private undertaking would be able to do, sank a borehole of 374 metres at which depth the rods got jammed. This obstruction had not been removed when hostilities commenced in 1914. The section of the borehole at Witboyvley, east of Gibeon, showed:—

Up to	80 metres	blue clay shale,
Then to	80.35 ,,	oil shale,
,,	300 ,,	mostly blue shale, sometimes grey sandstone,
,,	312–320 ,,	hard conglomerate (Dwyka),
,,	325–374 ,,	blue clay shale.

Fissure coal is found in the Fish River sandstones near Itsavisis in veins a few inches in width. The veins range in width from a few millimetres up to 75 centimetres, but the greatest width of solid coal so far struck does not exceed 25 centimetres. The material is considered to represent a carbonized asphalt.

9. **Iron.**—Extensive iron deposits are found in various parts of the territory, but owing to the distance of these occurrences from the coast and the railway, their exploitation would not prove profitable. The chief deposits have been located in the Kaokoveld. The ore here is said to contain 60 per cent. of iron, and to be free from substances which render smelting difficult. At Kalkfeld, a branch line from the Karibib-Omaruru Railway was laid to facilitate tapping an ore deposit there. The mine is being worked by the Otavi Minen-und-Eisenbahn-Gesellschaft, which uses the ore at Tsumeb in the smelting works for fluxing the lead-copper ores.

10. **Vanadium.**—Ores of this metal have been opened up in the Grootfontein District, and the export of these is becoming of increasing importance. An output of 2,122 tons was attained in 1924.

The vanadium ore exported in recent years was as follows:—

EXPORT OF VANADIUM ORE, 1921 TO 1924.

Mines.	1921.		1922.		1923.		1924.

South West Africa Company, Limited	—	—	1	57	892	46,358	1,355	70,472

11. **Other Minerals and Metals.**—Apart from the deposits already mentioned, a variety of minerals have been located throughout this territory; but in the majority of cases the prospector has merely registered the find in the Mining Office, and has not proceeded to prove the value of the discovery. Metals under this head and their location are as follows:—

Apatite—Near Haigamkhab and Rössing (Swakopmund).

Asbestos (Tremolite)—At Pforte and Karibib; Serpentine, near K.M. 15 of the Otavi Railway.

Beryl (Heliador aqua-marine)—Near Rössing and Donkerhoek (Swakopmund District), and in pegmatite veins in the Namib.

Corundum—Ariams and Khomas Mountains.

Cobalt, nickel—Areb, near Rehoboth.

Haematite (see also iron)—Fransfontein (Kaokoland and Mining Company boundary) and Schweikhardt's Brunn, 28 kiles n. of the water place Ganas Okawa, and other places in the Kaoko territory: large deposits.

Iron (see also Haematite)—Various places in the Kaokoveld, Garub Mountain, near station Garub, west of Kaukausib (District Luderitz), large deposits in the Namib between Luderitz and Swakopmund.

Limestone—Near Okahandja, Okakango.

Lead (Galena)—Duwisib, Kleinfontein South, Aiais (S.A. Territories).

Mica—Rössing and Welwitsch, near Swakopmund.

Monazite—Small traces around Erongo Mountains, together with wolframite and tantalite, and in various tin fields.

Mottramite—Near Tsumeb, Bobos, and Otavi Valley, and at Nosib and Rietfontein, near Grootfontein.

Molybdenite (minor deposits)—Near Otjozonjati, Okamuvia, Khan Mine, etc.

Nickel and Cobalt—Areb, near Rehoboth.

Oil—Found in bituminous shales in boreholes (for coal, see paragraph 8) in the District Gibeon. An assay of this oil by Dr. R. Marloth, of Cape Town, on 10th February, 1914, gives:—

	Per Cent.		Per Cent.
Mineral oil (extracted by chloroform)	24·14	Ash.....	37·20
Insoluble coaly substance.....	36·46	Moisture.....	2·12

Rock Salt—At the Kuisib River, District Swakopmund.

Rose Quartz—Near Rössing, Swakopmund.

Scheelite—Natas Mine, Windhoek, and Rehoboth boundary.

Salt—Etoscha Pan, and surrounding smaller pans, Aminuis Pan, Gobabis, etc.

Silver—The Tsumeb copper and lead ores, in Galena near Duwisib (Maltahoehe) and near Karibib.

Tantalite and Columbite—Donkerhoek, District Swakopmund, and in various tin fields.

Topaz—Many places in the Namib between Erongo Mountains and the coast, in pegmatite lodes, in eluvial and alluvial deposits.

Tourmalines (green and red)—Karibib, Swakopmund, and Omaruru Districts.

Uranium—Traces at the Ida Mine, Swakopmund District.

Wolframite—Ida Mine, Pforte, in various tin fields, South African Territories land near Klein Kharras.

Zinc—Khan Copper Mine, Tsumeb Mine.

12. **Mineral Laws of the Territory.**—The mining law in force in the territory is the Imperial Mining Ordinance of the 8th August, 1905, as amended by Proclamation No. 24 of 1919. The Ordinance applies to the following precious metals :—

Gold, silver, and platinum, both in their native state and as ores ;

Precious stones (diamonds, rubies, emeralds, and sapphires) ;

All metals not mentioned above, in their native state and as ores ;

Mica, semi-precious stones, asbestos, and fluor-spar ;

Coal, salts, and valuable earths, for example :

(*a*) Coal, brown coal and graphite ;

(*b*) Bituminous substances in solid, liquid, or gaseous state, especially petroleum and asphalt ;

(*c*) Rock salt, including other salts found in deposits of this nature, and the brine springs ;

(*d*) Earths which can be made use of on account of their sulphur contents and for the production of alum, sulphates, and saltpetre ;

(*e*) Phosphates (organic and inorganic) and guano.

(i) *Prospecting Claims.*—Prospecting is permitted practically over the whole country, where the Ordinance is in force, with the exception of the following places : public roads, public places, railways, burial places, and on all properties where, in the opinion of the Mines Department, it is not in the public interest to allow prospecting. The Mines Department also decides the distances from springs and other sources of water within which prospecting is not allowed. No prospecting is permitted under buildings and within 50 metres of these, nor in gardens and enclosed yards, unless both owner and user of the property give their sanction. The size of a precious mineral prospecting claim is 200 × 400 metres, and a base metal claim 600 × 1,200 metres, the claims being rectangular in shape.

No person may prospect in any district unless in possession of a prospecting licence issued by the mining authority or the magistrate of such district. The charge for thie licence is 2s. 6d. for each month or part of a month of the period for which the licence was issued. When a claim has been pegged, notice must be given as soon as possible to the Mines Department, the maximum time allowed between the pegging and the notification being four weeks. At the same time, prospecting fees, fixed at 10s. per month for each precious mineral and 5s. for each base mineral claim, must be paid for six months in advance, similar payments being continued to be paid in advance for corresponding periods as long as the claims are held.

(ii) *Mining Claims.*—Mining is permitted only on mining claims. Every prospecting claim can be converted into a mining claim upon application after being properly surveyed and beaconed off. The mining claim must have the shape of a rectangle, and must fall within the boundaries of the prospecting claim, the length not exceeding five times the width of the claim. After certain formalities have been gone through (such as due publication, etc.), the conversion of a prospecting claim into a mining claim takes place. Mining must be commenced within two years of the granting of the title.

(iii) *Taxes.*—The taxes on a mining claim consist of licence moneys and a royalty. The licence money for a precious metal claim is thirty shillings per hectare per annum, and for a base metal claim one shilling per hectare per annum, but not less than thirty shillings per annum. The mining tax or royalty is 2 per cent. of the gross value of the minerals at the shaft head before treatment.

The diamond tax was regulated by an Imperial Decree on the 30th December, 1912, by which the tax was fixed to be 66 per cent. of the value of diamonds, less 70 per cent. of the working expenses.

(iv) *Compensation.*—When mining on private land, the miner may be compelled to purchase the ground in case it is deteriorating in value owing to the mining operations. In any case he has to make good any damage caused. The landowner receives one-quarter of the royalty mentioned above.

§ 13. Manufacturing Industries.

Manufacturing Industries.—The following table gives particulars regarding manufacturing establishments in South West Africa in 1923–24 :—

Heading.	Stone, Clay, Earthenware, and Glass.	Working in Wood.	Metal, Engineering, Machinery, and Cutlery Works.	Food, Drink, Condiments, and Tobacco.	Vehicles.	Building and Contracting.	Other Manufacturing Processes.	Total.

§ 14. Commerce.

1. **Trade.**—Before the annexation by Germany, the bulk of the trade of the territory went to the Cape Colony through Walvis Bay in the west, Raman's Drift in the south, and Rietfontein in the east. Inland, it was in the hands of Cape traders, who established depots at various centres, from which they took trips in different directions, bartering their goods with the natives for cattle, ivory, ostrich feathers, and other spoils of the chase. In addition to these were others, who brought across from the Cape through Rietfontein numbers of horses, which they exchanged for cattle at a profit which seems almost incredible, inasmuch as upwards of ten head of cattle were sometimes given for a mare ; whilst their activities in fostering transactions in arms and ammunition may possibly account for the ceaseless tribal warfare that existed in those days.

With the advent of the German missionary came German competitors for this trade, and when eventually annexation took place, a policy of exclusion was adopted as far as foreigners were concerned.

The following table gives particulars regarding the trade between South West Africa and the Union since 1910 :—

VALUE OF IMPORTS FROM UNION, 1910 TO 1924.

YEAR.	IMPORTS INTO SOUTH WEST AFRICA FROM UNION.			EXPORTS FROM SOUTH WEST AFRICA TO UNION (excluding diamonds).
	South African Produce.	Imported Goods Re-exported.	Total.	
	£	£	£	£
1910	118,626	93,386	212,012	4,855
1911	121,256	73,293	194,549	1,513
1912	80,660	49,772	130,432	3,687
1913	96,659	44,369	141,028	7,554
1914	45,618	24,505	70,123	3,015
1915	190,606	244,877	435,483	12,158
1916	358,269	585,392	943,661	63,414
1917	378,352	682,772	1,061,124	49,784
1918	445,398	586,136	1,031,534	46,506
1919	449,915	685,201	1,135,116	447,627
1920	645,084	1,144,280	1,789,364	428,946
1921	371,937	487,389	859,326	303,246
1922	364,363	373,993	738,356	423,568
1923	417,825	41,454	459,279	559,777
1924	476,258	47,820	524,078	606,305

The value of diamonds exported from South West Africa has fluctuated considerably, as will be seen from the tables given under the head of "Mines."

Another export of note is live stock. Until the latter part of 1918 the border was closed and the export of cattle to the Union was prohibited. This enabled the flocks and herds to recover from the losses caused by the campaign. For details of the exports of live stock to the Union, see § 11 above.

The extent of the export trade in copper ore is indicated by the particulars given in § 12 above.

2. **Customs and Excise.**—In terms of the provisions of Act No. 35 of 1921 (Union of South Africa), the mandated territory of South West Africa is regarded for the purposes of the collection of customs and excise duties as part of the Union, and all customs and excise laws of the Union are applicable to the territory. The duties collected are paid into the Consolidated Revenue Fund of the Union, out of which fund is to be paid annually towards the cost of the administration of the territory a sum which shall approximate to the customs and excise duties paid on goods consumed in such territory after deducting therefrom a sum equivalent to the said duties on goods removed from the said territory for consumption in the Union. It is estimated that the revenue from this source should reach at least £110,000 per annum.

§ 15. Harbours.

1. **Luderitz.**—This harbour is 485 miles by sea from Cape Town. There is a well sheltered harbour, with good anchorage, and the port possesses the usual facilities for dealing with traffic. It owes its prosperity as a seaport to the discovery of diamonds in 1908 in the adjacent Kolmanskop and Pomona districts. The trade of the port is increasing and improved facilities are being provided to cope with it. A new reinforced concrete jetty, 540 feet long, has been constructed; a slipway for lifting tugs, lighters, and small craft is being provided, and a new steel lighter of 170 tons capacity has been placed in commission and another is in course of erection.

Crayfish canning has been established at this port, and considerable quantities of this article are exported to Europe.

2. **Walvis Bay.**—This port is situated in the small enclave of British territory retained when Germany annexed South West Africa. It is distant 735 miles by sea from Cape Town, and 21 miles south of Swakopmund. Walvis Bay was never developed, and served only as a detached Magistracy and Police Post for the protection of British interests.

The port has a natural and well-sheltered harbour, and its advantage over the German port of Swakopmund for the landing of troops and stores brought it into prominence as

the northern base of operations. Swakopmund has since been permanently closed as a port, and the whole of the landing and shipping work transferred to Walvis Bay, which is now a regular port of call for mail steamers of British, German, and Holland lines.

Considerable development has taken place here, and warehouses, engine sheds, dwelling-houses, etc., have been erected; whilst additional temporary wharves have been run out, and a new slipway constructed, and improved and extended goods and station yards provided. Provision has been made for the dredging of a channel and the construction of wharves to enable ships to be brought in to discharge their cargoes direct on to the wharves and load therefrom. The Rooibank water scheme has been completed, and provides a sufficient supply of water for the requirements of the port, and the new township which has been laid out. A wireless station is established near the port. A cold storage building and refrigerating plant is in the course of erection, which will be capable of handling 150 cattle and 200 to 300 sheep per day; it is the intention, when completed, to export chilled meat.

Three new steel lighters of 170 tons capacity have recently been supplied—another is under construction. A new tug, the "J. W. Herbert," has just been supplied to this port.

By Act No. 24 of 1922 Walvis Bay is administered as an integral part of South West Africa, the change being effected on the 1st October, 1922.

§ 16. Railways and Roads.

1. **German Railway System.**—Immediately prior to the outbreak of hostilities the railway system in the territory then known as German South West Africa comprised the following:—

State Railways—	Miles.	Chains.
(*a*) Broad Gauge:		
Karibib to Keetmanshoop	432	4
Luderitz to Keetmanshoop	226	51
Seeheim to Kalkfontein	111	44
(*b*) Narrow Gauge:		
Swakopmund to Karibib	112	61
†Swakopmund to Tsumeb	359	75
†Otavi to Grootfontein	57	—
‡Otjiwarongo to Outjo	21	76
Kalkfeld to Iron Mine	6	66
Rehoboth Station to Village	7	54
TOTAL	1,336	31
Private Lines—		
Narrow Gauge:		
Kolmanskop to Bogenfels	74	—
Arandis to Khan Copper Mine	6	60
Karibib to Marble Quarry	7	46
Otavi Mining Co.	9	54
TOTAL	98	—
GRAND TOTAL	1,434	31

These railways were constructed at varying intervals between 1903 and 1915, the first construction being that of the Otavi Railway Co. in 1903.

2. **Railway Extension.**—When the invasion by the Union military forces became imminent, the German Command pulled up the section of the State railway line from Swakopmund to Rössing—approximately 25 miles across the Namib desert—with a view to retarding the advance of the Union troops, and during the whole of the campaign an immense amount of damage was done to the permanent way and bridges throughout the country by the German troops in their retreat before General Botha's forces.

The work of connecting the Union railway system with the German terminus at Kalkfontein (South), with a view to expediting the advance of the Union forces and securing direct lines of communication, was rapidly pushed forward, and the whole of the line from Prieska to Kalkfontein—a distance of 315½ miles—was completed between September, 1914, and June, 1915, including a delay of about four months owing to floods, which prevented the construction of the Orange River bridge.

† Constructed and worked by the Otavi Railway Co. until 1913, when the German State Government bought out the Company.

‡ Commenced after the outbreak of the war and work continued until April, 1915.

A short line was also run by the Northern Force from Walvis Bay (British) to Swakopmund—21 miles 2 chains—and the Otavi Company's line from Swakopmund was converted from 2′ gauge to 3′ 6″ to Karibib by the Railway Engineers Corps, thus ensuring a standard gauge from Walvis Bay throughout the conquered territory to the Union.

The remainder of the 2′ gauge German State Railway from Rössing to Karibib, which had been left intact by the enemy, was pulled up shortly after the cessation of hostilities by the Union railway authorities.

3. **Organization under Union Railway Management.**—The railways in South West Africa were incorporated in the Union system from the 1st April, 1922, under the administration of a Divisional Superintendent. In addition, the control of the Divisional Superintendent extends over the Union sections Walvis Bay to Swakopmund (border) and De Aar (exclusive) to Nakop (border). The total mileage of the South West Africa railway system is shown hereunder :—

	Miles.	Chains.
Union Lines—		
Broad Gauge :		
Walvis Bay to Swakopmund Border	20	2
De Aar to Nakop Border	343	54
TOTAL	363	56
South-West Territory Lines—		
Broad Gauge :		
Nakop (border) to Swakopmund	769	24
Seeheim Junction to Luderitz	197	52
Gobabis Junction to Ondekaremba	29	69
Narrow Gauge :		
Usakos* to Tsumeb	257	44
Otavi to Grootfontein	57	—
Otjiwarongo to Outjo	45	73
Kalkfeld to Iron Mine†	6	66
TOTAL	1,364	8
GRAND TOTAL	1,727	64

At the outset the task of making good the large amount of damage occasioned by the war had to be undertaken in order to secure a regular supply of foodstuffs and stores for the British garrison troops and German population. Temporary repairs to buildings, bridges, and track were speedily carried out, and within a very short period a regular passenger and goods service was established with the Union. The estimated damage suffered by the railway system amounted to approximately £350,000. Up to the end of March, 1922, £125,428 were expended on the work of permanently restoring the damage, whilst £25,000 had been expended in new and additional works, such as quarters for staff, buildings, machinery, etc. Since March, 1922, the works have been carried on under the ordinary working votes, and the expenditure in connection with the work of restoring damage done by troops under war conditions is not now recorded separately.

No actual development of the railways in regard to construction of feeder lines, etc., could be undertaken until the destiny of the country was finally decided upon, and until the known mineral resources of the territory were properly exploited and developed. It is anticipated that some time must elapse before any definite steps can be taken in this direction. A branch line, however, extending from a point near Windhoek Station to Ondekaremba was sanctioned, and was completed towards the end of 1924, the cost being—

	Miles.	Chains.	£
Windhoek (Gobabis Junction) to Kapp Farm	17	40	129,463
Kapp Farm to Ondekaremba‡	12	49	61,720

Commercially, considerable activity has been manifest in live stock traffic to Union markets, with limited shipments of cattle to oversea markets, and a very firm business established in slaughter stock to the Union during the past three years, necessitating the provision of additional facilities at the principal loading depots for handling the traffic.

* From Usakos to Kransberg the traffic is operated over a tri-rail, the three rails serving standard and narrow gauges. † Private siding.

‡ An extension of the line from Ondekaremba to Witvlei, a distance of 86 miles, at an estimated cost of £348,000, has been sanctioned.

A heavy export trade in copper ore from the Otavi Exploring Syndicate, Limited, has been maintained. During the financial year ended 31st March, 1925, 53,340 tons of copper ore were railed from Tsumeb Station to Walvis Bay for shipment. The smelting on a fairly large scale has created a demand for coal and coke traffic, which is conveyed by rail from Natal mines in the Vryheid district, to Tsumeb, a haul of approximately 2,044 miles.

Iron ore mined at the Kalkfeld iron mines is hauled to Tsumeb to meet the demand created at that place, and for the financial year ended 31st March, 1925, 13,380 tons were hauled, as compared with 17,518 tons for the year ended 31st March, 1924.

Owing to the paucity of the population and distance from suitable markets, very little, if any, development in agriculture has been undertaken. Small quantities of skins, hides, and wool are dispatched to the Union, and an increasing demand for a very good quality of marble from the Karibib quarries has been observed.

Undoubtedly the discovery of a satisfactory supply of coal in the Territory would give an impetus to local industries and decrease working costs for the Railway and other Government Departments, with the possibility of creating a demand at Walvis Bay and Luderitz for bunkering and export trade.

In terms of Act No. 20 of 1922, the South West Africa railways became part of the Union system, both as regards administration and financial organization, and are worked on Union lines under the control of a Divisional Superintendent, with headquarters at Windhoek.

4. **Roads.**—At the time of the annexation of the country by the German Government it was fairly well served with roads. There were two main roads running inland from the south. One crossed the Orange River at Sendling's Drift, passed over the sandy belt to Aus, where it was joined by a road from Luderitz, and ran northward through Maltahoehe to Nomtsas. There it divided, a branch going westward to Walvis Bay, and another northward through Rehoboth to Windhoek. The other road crossed the river at Raman's Drift, and passed through Warmbad and Kanus to Keetmanshoop. It was joined there by a road from Upington through Nakob, Ukamas, Davignab and Khais, and another from Rietfontein through Hasuur. From Keetmanshoop it continued through Berseba and Gibeon to Rehoboth. Another important trading route was that passing through Rietfontein and running northward through Koes and Gochas to Stamprietfontein, where it branched to the left, going through Rehoboth almost due west to Walvis Bay, and to the right through Gobabis as far as Epukiro. From Windhoek, one road went east through Osona, Otjimbingue and Haigamchab to Walvis Bay; another east through Seeis and Gobabis to Lake N'Gami; and a third northwards to Okahandja, where it divided, and the left branch ran through Omaruru, Outjo, Okahandja, to Ovamboland and Portuguese territory, whilst the right went through Waterberg to Grootfontein. There were, of course, minor roads which connected up these main routes.

In 1909, local government was granted to the different districts in the territory, and this enabled each district to elect a council, one of the chief duties of which was the maintenance and control of the district roads. These roads were maintained from funds provided by the Government. Roads within a municipal area were under the control of the municipality, which had the power of levying an income tax from the proceeds of which such roads were maintained. In addition to the proceeds of this tax, revenue from dog licences and from other sources was available for the maintenance of municipal roads. Roads other than the two classes above mentioned were those usually connecting one farm with another, and were called communication roads. They were made and maintained by private enterprise.

Along district roads an outspan place of 494 acres in extent was provided at intervals of every 20 miles, whilst travellers were entitled to grazing for 500 metres on each side of it. If the road passed through private property the owner of which refused to allow any outspanning thereon, he was bound to place notices to that effect at the spots where the road entered his property. The Waterberg district is the only one where this obligation has been carried out to some extent. Numerous other provisions relating to roads are contained in the Road Ordinance of 1912.

§ 17. Posts, Telegraphs, and Telephones.

1. **Organization and Finance.**—The number of Post and Telegraph Offices open at 31st March, 1925, was 96; also private bag services, 175. There are 27 Money Order and Savings Bank Offices.

Post, telegraph, and telephone facilities are identical with those prevailing within the Union of South Africa, with the exception that Agricultural parcel post business is not undertaken.

The rates of postage, inland telegraph*, and cable rates are the same as within the Union.

The Union Act, No. 10 of 1911, has not been applied to South West Africa.

* The rates charged for telegrams handed in for disposal within the Territory was reduced on the 25th July, 1926, to 1s. for twelve words and 1d. for each additional word.

3. **Savings Banks.**—In order to furnish Savings Bank facilities—the Union Post Office Act, No. 10 of 1911, being inoperative—Proclamation No. 8 of 30th June, 1916, made provision for Post Office Savings Bank business as from 1st July, 1916, with transfers at par between the Union of South Africa, the United Kingdom, Southern Rhodesia, India, and the Province of Mozambique.

The interest on Savings Bank deposits is 3½ per cent. per annum. The maximum sum which a depositor may bank is £1,000, exclusive of interest. Further facilities were arranged from the 1st November, 1918, whereby the territory and the Union arranged to accept deposits and withdrawals on behalf of each Administration, and to encash circular warrants.

SAVINGS BANK ACCOUNTS, 1916 TO 1925.

Year.	Opened.	Closed.	Remaining Open at End of Year.	Deposits.	Withdrawals during Year.	Amount Due to Depositors.

1924–25	1,034	290	2,071	87,278	43,810	79,128

4. **Money and Postal Orders.**—Money Order facilities were introduced on the 1st January, 1917 and extended to all countries embraced in the Universal Postal Union.

The rates of commission are :—

For South West Africa, 6d. per first unit of £4. and 3d. per unit thereafter. Maximum for one order £40.

For Union of South Africa, 6d. per unit of £4. Maximum for one order, £40.

For Rhodesia and Province of Mozambique, 9d. per unit of £4.

For payment elsewhere, 1s. per unit of £4.

6. **Telephones.**—German telephone rates in South West Africa have not been disturbed. The present rates are :—

Business Connexion	£10 0 0 per annum.
Residential	7 10 0 per annum.
Rural Party Lines, per Subscriber	15 0 0 per annum.
Indoor Connexions	5 0 0 per annum.
Outdoor Extensions, per ¼ mile	1 5 0 per annum.
Trunk Tariff (Flat Rate)	0 1 6 per conversation of three minutes.
Party or Rural Line where no pre-war contract exists	£3 per mile for single wire. £4 per mile for metallic circuit, plus £1 for each telephone installed. Total rental divided *pro rata* amongst number of participants.
Transfers	Indoor, in same room, 7s. 6d. Indoor, room to room, 15s. Outdoor, £2.

The rural party-line rental is £15 per annum, irrespective of the number of participants or the distance.

Exchanges have been established at Aroab, Aus, Bassermann, Berglands, Bethanie, Brakwasser, Davignab, Dorbabis, Gibeon, Gobabis, Grootfontein, Hofmeyr, Hohewarte, Kalkfeld, Kalkfontein South, Kalkrand, Kapps Farm, Karibib, Keetmanshoop, Kiries West, Klein Karas Rail, Klipdam, Kolmanskop, Kub, Kuibis Rail, Leutwein, Luderitz, Maltahoehe, Mariental, Mier, Narubis, Neuheusis, Okahandja, Okasewa, Okasise, Omaruru, Omitara, Ondekaremba, Otavi, Otjikururume, Otjivero, Otjiwarango, Outjo, Rehoboth, Rietfontein, Seeis, Seeheim, Spitzkoppe, Stamprietfontein, Swakopmund, Tsumeb, Ukamas, Usakos, Walvis Bay, Warmbad, Waterberg, Wilhelmstal, Windhoek, Witvley. Trunking facilities have been extended throughout the territory, also as far as Upington. The speech efficiency of superimposed lines is approximately 400 miles. The telephone exchange system in operation totals 704 miles.

TELEPHONES, 1915 TO 1925.

Year.	Exchange Connexions.	Extensions.
	No.	No.
1915	175	13
1916	311	101

7. **Wireless Telegraphs.**—The Walvis Bay Radio Station has a normal day range of 1,250 miles and 2,500 miles at night. The station is equipped with valve receiving apparatus, and deals with all radio traffic for South Africa north of latitude 30° south.

The following figures show the radio traffic since the opening of the station :—

	Messages.	*Words.*	*Value.*
September, 1922, to December, 1923	3,160	41,171	£1,029
1924	8,191	100,497	£2,512

§ 18. Finance.

1. **Public Revenue.**—The principal source of revenue in the territory is that derived from the tax on the diamond mines at Luderitz. The assessment of this tax has been completed in the terms of the German law, which provides, broadly, that the Government receives 66 per cent. of the gross proceeds realized by the sale of diamonds, less 70 per cent. of the working costs. The next largest item of revenue is that collected under the head of Customs and Excise.

Particulars are given hereunder of Revenue received during a series of years :—

REVENUE, APRIL, 1919, TO MARCH, 1925.

DESCRIPTION.	1919-20.	1920-21.	1921-22.	1922-23.	1923-24.	1924-25.

TOTAL £	643,484	1,601,216	870,924	853,798	849,238	652,115

2. **Public Expenditure.**—The main item of expenditure to 31st March, 1920, was that on the Garrison, which included the Police Force, and amounted to £2,421,617 from August, 1915, to March, 1920. All other heads of Administrative expenditure for the same period together amounted to £618,197, making a combined total of £3,039,814. The total expenditure to 31st March, 1925, was £7,797,471.

Particulars are given hereunder as to expenditure during a series of years :—

EXPENDITURE, APRIL, 1919, TO MARCH, 1925.

* Also includes Irrigation to 1919–20. † Includes war losses compensation.

3. **Financial Organization.**—The territory under the German Government had not reached the independent stage of British self-governing colonies. The Landesrath was merely an advisory body, and all Fiscal Edicts were issued by the Governor. The estimates of Revenue and Expenditure prepared in the territory required the sanction of the Imperial Reichstag. The supervision of the Imperial Government was held to be justified on the grounds that Imperial grants were made annually to the Protectorate, although these grants merely approximated the cost of the military establishment. The Imperial Government guaranteed the loans issued for the purpose of building railways. The control of all revenue and expenditure, including that of the Railways, but excluding Post and Telegraph Revenue, was exercised by the *Finanz Referent* under the Governor. The Post and Telegraph Department was a branch of the Imperial Department, and quite distinct from the Protectorate Administration. Certain Revenues were assigned by the Governor to Municipal and District Councils. These included Dog Tax, Liquor, Bar, Hotel, and Trade Licences. The local authorities were also empowered to raise funds for local purposes by means of an Income Tax.

After the British occupation, changes were made to bring the administration into line with the administration of the Union, but no fundamental changes were made in the taxation laws. The Administration was financed by grants from the Union War Loan Vote to March, 1920. Since that date the Administration has been financed from revenue raised in the territory. The Railways were taken over and financed by the Railways and Harbours Department of the Union ; but the German tariff of charges was retained. Union Act No. 20 of 1922 enacts that the Government railways and harbours in the territory, as they existed on the 10th January, 1920, should become from that date vested in the Railway Administration of the Union as part of the Union system. The loss arising from the working of the railways from 1st August, 1915, to 31st March, 1922, was made chargeable to the Union Railways and Harbours Capital Account, while future receipts and expenditure will be charged to the Union Railways and Harbours Fund. The territory was thus relieved of the burden of financing the railways and maintaining the high rates levied under the German laws. Considerable reductions have already been made in the through passenger fares to the Union and in goods traffic rates.

The Municipal Councils continued to exist, and the German practice of assigned revenues was followed by the British Administration. The District Councils were abolished.

Generally, the revenues payable under the German laws have been collected and utilized in part payment of the cost of administration. The Customs revenues have been collected and retained in the Union ; but from the 1st April, 1919, these were credited to the territory. The Union Treasury was authorized to exercise financial control in the territory.

The provisions of the *Exchequer and Audit Act*, 1911, of the Union of South Africa were applied to South West Africa as from the 1st April, 1921. The financial regulations framed under the Act were also applied as far as they could be made applicable, and financial regulations to meet local requirements were also issued.

4. **Banking Facilities.**—Immediately after the occupation the National Bank and the Standard Bank of South Africa both established branches in the territory. These institutions have branches in all the larger towns. The German banks continued to carry on their business. The principal one was the Deutsche-Afrika Bank, with branches at Windhoek, Swakopmund, and Luderitz, liquidated in 1922.

The remaining German banks, more correctly described as mortgage banks and co-operative farmers' associations, operated on a very small scale. They consisted of the Genossenschafts at Windhoek, the Spar und Darlehens Kasse at Gibeon, the Nord Bank at Omaruru, and the Bodenkredit Gesellschaft (later the Commercial Bank of South Africa, Ltd.), with branches at Windhoek, Luderitz, and Swakopmund. Of these the Genossenschafts at Windhoek, the Nord Bank at Omaruru and the Bodenkredit Gesellschaft were also liquidated in 1922.

§ 19. Cost of Living.

Cost of Living.—So far as South West Africa is concerned, the collection of retail price data is undertaken by the Union Census and Statistics Office. Quotations are obtained monthly from retail merchants in six towns of the Territory, and price indexes are compiled in respect of each quarter. For obvious reasons it was impossible to obtain price data in respect of this Territory prior to 1920 and, for comparison purposes, what is utilized as a base for calculation purposes is the weighted average for the nine principal towns in the Union for 1910.

The following table contains price indexes for food for the years 1920 to 1925 in respect of Windhoek and the weighted average of the six towns.

PRICE INDEXES FOR FOOD, 1920, TO FOURTH QUARTER, 1925.

(Basis: Weighted average for nine principal towns in the Union in 1910 = 1000.)

Year.	Windhoek.	South West Africa, Weighted Average Six Towns.
1920	1989	2027
1921	1737	1785
1922	1453	1437
1923	1381	1387
1924	1353	1374
1925 (First Quarter)	1390	1398
(Second Quarter)	1466	1429
(Third Quarter)	1455	1412
(Fourth Quarter)	1428	1408
(Year)	1435	1412

In the case of items other than food it has not been found practicable to secure the necessary data for the compilation of indexes.

CHAPTER XXVIII.

PERSONS AND EVENTS.

§ 1. Executive and Parliamentary Representation.

1. The following lists contain the names of the various persons concerned in the government of the country. For information on the subject of the Constitutional Development, Parliamentary Institutions, and Public Administration of the Union, reference should be made to Chapter II.

2. **The Governor-General.**—The following have been successively Governors-General of the Union :—

Name.	Date of Royal Commission.	Date of Assumption of Office.
Right Hon. Viscount Gladstone, P.C., G.C.B., G.C.M.G., G.B.E.	30th March, 1910.....	31st May, 1910.
Right Hon. Viscount (now Earl) Buxton, P.C., G.C.M.G.	14th May, 1914.....	8th September, 1914.
H.R.H. Prince Arthur of Connaught, K.G., K.T., G.C.M.G., G.C.V.O., C.B., A.D.C.	5th August, 1920.....	20th November, 1920.
Major-General the Right Hon. the Earl of Athlone, G.C.B., G.C.M.G., G.C.V.O., D.S.O.	21st November, 1923..	21st January, 1924.

The personal staff of His Excellency the Earl of Athlone is as follows :—
Comptroller and Private Secretary : Captain R. C. Hargreaves, M.V.O., M.C.
Aides-de-Camp : Lieut.-Commander G. A. V. Hawkins, M.V.O., D.S.O., R.N.; Captain J. N. P. Lascelles; and Captain G. Fielden.

3. **The Executive Council.**—The Governor-General, together with the Ministers named in the following list, constitutes the present * Executive Council :—

General the Hon. J. B. M. Hertzog, Prime Minister and Minister of Native Affairs.
Hon. T. J. de V. Roos, K.C., Minister of Justice.
Hon. Dr. D. F. Malan, Minister of Interior, Public Health, and Education.
Colonel the Hon. F. H. P. Creswell, Minister of Defence.
Hon. N. C. Havenga, Minister of Finance.
Hon. F. W. Beyers, K.C., Minister of Mines and Industries.
Hon. C. W. Malan, Minister of Railways and Harbours.
Hon. P. G. W. Grobler, Minister of Lands.
General the Hon. J. C. G. Kemp, Minister of Agriculture.
Hon. T. Boydell, Minister of Labour.
Hon. W. B. Madeley, Minister of Posts and Telegraphs and Public Works.

4. **Members of the Senate.**—The following is a list of the members of the Senate :—

NOMINATED SENATORS.

†Brig.-Gen. the Hon. D. J. E. Opperman.
†The Hon. A. W. Roberts, D.Sc., F.R.S.E., F.R.A.S.
The Hon. Sir Charles G. Smith, K.C.M.G.
†Col. the Hon. Sir Walter E. M. Stanford, K.B.E., C.B., C.M.G.
The Hon. J. P. Steyl.
†The Hon. H. G. Stuart (*Deputy-President and Chairman of Committees*).
The Hon. P. J. van der Walt.
The Hon. H. C. van Heerden (*President*).

* At 30th September, 1926.

† Selected in terms of section 24 (ii) of the South Africa Act on the ground mainly of their thorough acquaintance, by reason of their official experience or otherwise, with the reasonable wants and wishes of the coloured races in South Africa.

ELECTED SENATORS.

CAPE OF GOOD HOPE.

The Hon. A. J. Fuller.
The Hon. Sir Jacobus A. C. Graaff, K.C.M.G.
The Hon. C. J. Langenhoven.
The Hon. J. P. Malan.
The Hon. O. A. Oosthuizen.
The Hon. C. A. Schweizer.
The Hon. C. E. Tod.
The Hon. A. H. Watkins, M.D.

NATAL.

The Hon. F. O. F. Churchill.
The Hon. W. F. Clayton.
The Hon. W. Cochrane.
The Hon. F. Greaves.
The Hon. J. Schofield.
The Hon. J. J. Uijs.
[Two vacancies.]

TRANSVAAL.

The Hon. N. J. de Wet, K.C.
The Hon. J. L. Grobler.
The Hon. R. A. Kerr.
The Hon. G. Munnik.
The Hon. F. W. Reitz.
The Hon. W. K. Tucker, C.M.G.
The Hon. J. D. F. Briggs.
The Hon. A. D. W. Wolmarans.

ORANGE FREE STATE.

The Hon. W. J. C. Brebner.
The Hon. D. J. J. Malan.
The Hon. C. A. van Niekerk.
The Hon. H. Potgieter.
The Hon. N. W. Serfontein.
Gen. the Hon. W. J. Wessels.
The Hon. H. F. de Wet.
[One vacancy.]

5. **Members of the House of Assembly.**—The following is a list of the Members of the House of Assembly as elected at the general election in June, 1924, and at subsequent by-elections :—

MEMBERS OF THE HOUSE OF ASSEMBLY.

Cape of Good Hope.

Electoral Division.	Name of Member.	Electoral Division.	Name of Member.
Albany	R. H. Struben, O.B.E.	Humansdorp	Hon. C. W. Malan.
Albert	L. J. Steytler.	Kimberley	Sir E. Oppenhiemer, Kt.
Aliwal	C. A. A. Sephton.	King William's Town	Maj. R. Ballantine.
Barkly	W. B. de Villiers.	Ladismith	J. J. M. van Zyl.
Beaconsfield	Col. Sir David Harris, K.C.M.G.	Liesbeek	C. Pearce.
Beaufort West	P. N. Basson.	Malmesbury	P. A. Bergh.
Bechuanaland	I. van W. Raubenheimer.	Namaqualand	J. P. Mostert.
Caledon	Hon. C. J. Krige.	Newlands	R. Stuttaford.
Calvinia	Hon. Dr. D. F. Malan.	Oudtshoorn	S. P. le Roux.
Cape Town (Central)	Hon. J. W. Jagger.	Paarl	Dr. A. L. de Jager.
Cape Town (Gardens)	C. W. A. Coulter.	Piquetberg	J. H. H. de Waal.
Cape Town (Hanover Street)	M. Alexander, K.C.	Port Elizabeth (Central)	Col. the Hon. Deneys Reitz.

Under-Secretary for Labour	E. H. W. Müller, B.A.
Chief Clerk	E. J. Scholtz.
Chief Inspector of Labour	I. L. Walker.
Chief Inspector of Factories	H. C. Fowler.
Principal Woman Inspector	Miss E. Winter.
Chairman of Wage Board	F. A. W. Lucas, K.C.

§ 4. Political Representatives.

1.—REPRESENTATION OF THE UNION GOVERNMENT ABROAD.

(i) *The High Commissioner in London and Principal Subsidiary Officers.*—The Office of "High Commissioner for the Union of South Africa" in the United Kingdom was created by Act No. 3 of 1911. The first occupant of the post was Sir Richard Solomon, K.C.B., K.C.M.G., K.C.V.O., who, on his decease in 1914, was succeeded by the Right Hon. W. P. Schreiner, P.C., C.M.G., K.C. On the death of the latter in June, 1919, Sir Reginald Blankenberg, the Secretary to the High Commissioner's Office, acted as High Commissioner until the appointment, in April, 1921, of Sir Edgar Harris Walton, K.C.M.G., who was succeeded, in March, 1925, by J. S. Smit, Esq.

The principal sub officers attached to the High Commissioner's office are: The Secretary; the Director of Stores and Shipping; the Advisory Engineer; the Trade Commissioner and the Commissioner of Commerce on the Continent of Europe (for particulars of whom see Chapter XVIII); the Publicity Agent; and the Accountant.

OFFICE OF HIGH COMMISSIONER IN LONDON—CHIEF OFFICERS.

Secretary	J. P. Joubert Brunt.
Trade Commissioner	J. H. Dimond.
Commissioner of Commerce on Continent of Europe	C. I. Pienaar.
Publicity Agent	G. E. Chittenden.

The offices of the High Commissioner are in Trafalgar Square, London, W.C. 2. The Commissioner of Commerce on the Continent of Europe has his headquarters in Milan.

(ii) *The Publicity Agent's Branch.*—A permanent official, styled "Publicity Agent," is attached to the office of the High Commissioner for the purpose of giving effect to the overseas publicity plans of the South African Railways and Harbours Administration which, through its Publicity Department in Johannesburg, prepares the data for making more widely known the agricultural and industrial potentialities and the natural travel attractions of South Africa. The necessary funds are provided by a vote annually included in the railway estimates, supplemented by subscriptions from municipalities, shipping companies, and other interested bodies.

(iii) *Agency of the Union Government at Lourenço Marques.**—The inevitably close connexion existing commercially and in numerous official ways between the Union and the neighbouring Portuguese colony of the Province of Moçambique renders it necessary to maintain at Lourenço Marques an Agency of the Union Government which directly represents all Union Government departments in their relations with the Portuguese authorities, and relieves the British Consulate of functions previously executed by the latter. In the absence of the British Consul-General, the Union Agent acts as Vice-Consul. The Agency is also available to the general public in the Union as a source of commercial and similar intelligence regarding the Province.

Destitute subjects of the Union are taken charge of by the Agency and either relieved or repatriated. The Union Agent is in liaison with the Union and Portuguese Criminal Investigation Departments. The Union Agency (subject to the Controller of Imports and Exports for the Union) deals entirely with the control of exports to Portuguese East Africa, and with the export through Delagoa Bay of Union coal—an important item, and one which is rigidly supervised. At the end of 1921 the system of permits for the export of goods from the Union to Moçambique was abolished.

An Immigration Office for the Union and a Union Customs establishment also exist at Lourenço Marques in order to eliminate delays which could not be avoided if all business had to be transacted at the Border station of Komatipoort. Weekly health statistics are furnished to the Union and Portuguese authorities.

2.—CONSULS OF FOREIGN COUNTRIES IN THE UNION.

	Vice-Consul	C. H. Hall	Johannesburg.
	Consul	F. H. Styles	Durban.
	Consular Agent	A. F. Fichardt	Bloemfontein.

§ 5. Provincial Administration.

1. **Administrators of the Provinces.**—The *South Africa Act* provides that in each of the four Provinces there shall be a chief executive officer appointed by the Governor-General-in-Council, and styled the Administrator of the Province. All executive acts relating to Provincial affairs are done in the name of this officer. In the appointment of an Administrator preference is, as far as possible, given to a person resident in the Province. Administrators are appointed for five years, and their salaries are provided by Parliament. The present Administrators of the several Provinces are :—

ADMINISTRATORS.

Cape of Good Hope	The Hon. A. P. J. FOURIE.
Natal	The Hon. Sir G. T. PLOWMAN, Kt., C.M.G.
Transvaal	The Hon. JAN H. HOFMEYR, M.A.
Orange Free State	The Hon. E. R. GROBLER.

2. **Executive Committees of the Provinces.**—Each Provincial Council elects at its first meeting, from among its members, or otherwise, four persons to form with the Administrator an Executive Committee for the Province, the Administrator acting as chairman. A member of a Provincial Executive Committee who is not also a member of the Provincial Council is entitled to take part in the proceedings of the Council but has not the right to vote. The function of Executive Committees is to carry on the administration of Provincial affairs on behalf of the Provincial Council. Executive Committees have the power, subject to certain considerations, to appoint officers to the Provincial Services. The present Provincial Executives are composed as under :—

EXECUTIVE COMMITTEES OF THE PROVINCES.

Cape of Good Hope.

A. J. CHIAPPINI. D. RETIEF.
G. H. GELDENHUYS. G. F. ZONDAGH.

Natal.

W. P. BAWDEN. C. F. CLARKSON.
J. DYSON. W. A. D. RUSSELL.

Transvaal.

J. F. BROWN. E. DE SOUSA.
B. D. G. PIENAAR. T. C. STOFFBERG.

Orange Free State.

Dr. D. G. CONRADIE. E. A. VAN DER WALT.
D. J. DE VILLIERS. H. J. J. VAN RENSBURG.

3. **Members of the Provincial Councils.**—The following list gives the name of the member representing each Provincial electoral division together with the name of such division :—

MEMBERS OF THE PROVINCIAL COUNCILS.

(i) *Cape of Good Hope.*

Electoral Division.	Name of Member.	Electoral Division.	Name of Member.

Union reverts to gold standard. Expedition to Kalahari to investigate irrigation possibilities. Afrikaans constituted an official language. Revised customs tariff introduced. Reserve Bank opens branches at Johannesburg, Cape Town, Durban, Port Elizabeth, and East London. Experimental air mail service between Cape Town and Durban proved successful. Shipping strike. Amalgamation of National Bank of South Africa with Barclays, London. Record maize shipments. Loss of maize-laden steamers "Margarita" and "Competitor." President Kruger's centenary. "Groot Constantia" destroyed by fire. Sir Frederick de Waal, Administrator of Cape Province retires. Appellate Court decides native women exempt from Transvaal Native Pass Ordinance, No. 43 of 1902. Appointment of Trade Commissioner in United States of America. New Cape Central Railway acquired by Government.

1926 Inland penny postage reintroduced (1st January). First visit of American tourists. Alan Cobham completes round flight by aeroplane England to Cape via Egypt. One hundred British farmers tour Union and Rhodesia. Joint sitting both Houses of Parliament to consider "Colour Bar Bill." Railway disaster at Salt River; 15 persons killed. Destructive fire at Witbank Colliery. Royal Air Force with three aeroplanes fly from Egypt to Cape and return to England. Disastrous cane fire in Natal; 13 natives perish. "Carnarvon Castle," first motor-driven regular mail liner trading with South Africa, arrives. Government delegation proceeds to India. General Hertzog, Prime Minister, attends Imperial Conference. Delville Wood Memorial unveiled. Interment of ashes of Miss Emily Hobhouse, National Memorial to Women, Bloemfontein.

§ 8. Obituary.

1925 J. Rochefort Maguire, C.B.E., Chairman of Chartered Company and Rhodesian Railways. Hon. C. R. Arnold, Senator, Cape Province. Hon. Joseph Baynes, C.M.G., ex-Member Natal Legislative Council. Dr. Anna Bliss, President Emeritus Hugenot University College. Hon. William Ross, ex-Member Cape Legislative Council. Hon. J. Rissik, Member of Railway Board. John Fairbairn, Clerk of the Senate. Ernest Granville, South African author and journalist. Major-General Sir H. T. Lukin, K.C.B., C.M.G., D.S.O.

1926 Hon. D. C. Uys, ex-Member Natal Legislative Council. Rev. D. J. Pienaar, D.R. Minister, Uitenhage. Hon. Sir Malcolm Searle, Kt., Judge President, Cape Provincial Division. Right Hon. J. X. Merriman, P.C., ex-Prime Minister, Cape of Good Hope. P. J. du Toit, Secretary for Agriculture. Hon. C. G. Maasdorp, ex-Judge of Appeal. Hon. D. Ward, ex-Judge, Orange Free State. Senator the Hon. I. W. B. de Villiers. Dr. J. D. F. Gilchrist, Marine Biologist. Hon. Thos. te Water, ex-Minister, Cape of Good Hope. J. Brand Wessels, M.L.A. (Bethlehem). Senator P. K. Fraser (Natal).

For considerations of space, the obituary of prominent South Africans from the date of Union up to and including the year 1924 has been omitted in this issue of the *Official Year Book*. A continuous list of events occurring in these years will be found in *Year Book* No. 7.

PART II.

THE SOUTH AFRICAN HIGH COMMISSION, BASUTOLAND, BECHUANALAND PROTECTORATE, AND SWAZILAND.

INTRODUCTORY.

SOUTH AFRICAN HIGH COMMISSION.

1. **The Office of High Commissioner.**—The Office of High Commissioner in and for South Africa was created by Letters Patent in 1878. In 1879 a second High Commissioner was appointed, to whom was assigned South-Eastern Africa, including Zululand and Amatongaland; but this arrangement ceased in 1881, when a Special Commissioner for Zulu affairs was appointed, who was also Governor of Natal (which now includes Zululand and Amatongaland). The High Commissioner for South Africa, who, under the Commission of 1889, was the officer for the time being administering the Government of the Cape, now represents the Crown in all matters occurring in South Africa beyond the limits of the Union and Southern and Northern Rhodesia. He was, till 1899, charged with the conduct of British relations with the South African Republic (Transvaal) and the Orange Free State, as well as those with native states and tribes outside the Colonies of the Cape and Natal, including Swaziland, which was administered by the Government of the South African Republic under the Convention of 1894.

The High Commissioner is Governor of Basutoland, and supervises the affairs of the Bechuanaland Protectorate and of Swaziland.

Prior to the 1st October, 1923, Southern Rhodesia was administered by the British South Africa Company, and the High Commissioner exercised certain powers of control under the Southern Rhodesia Order-in-Council, 1898. On the 12th September, 1923, the territory was annexed to His Majesty's Dominions as the Colony of Southern Rhodesia. On the 1st October, 1923, Responsible Government was established in the Colony, and on that date Lieutenant-Colonel Sir J. R. Chancellor, G.C.M.G., D.S.O., assumed office as Governor and Commander-in-Chief. Upon the establishment of Responsible Government, the Order-in-Council of 1898 lapsed, but under the Constitution Letters Patent, the High Commissioner was vested with certain powers and functions in regard to native administration, and the Southern Rhodesia Order-in-Council, 1920, whereby the Native Reserves were vested in the High Commissioner, was continued in full force and effect.

On the 1st April, 1924, Northern Rhodesia, which had previously been administered by the British South Africa Company, and over which the High Commissioner had exercised certain powers of control under the Northern Rhodesia Order-in-Council of 1911, came under the direct administration of the Crown. The new Government was constituted under the Northern Rhodesia Order-in-Council, 1924, which revoked the Order-in-Council of 1911, and provision for the establishment of a Legislative Council was made by the Northern Rhodesia (Legislative Council) Order-in-Council, 1924. Mr. H. J. Stanley, C.M.G. (now Sir H. J. Stanley, K.C.M.G.), assumed office as the first Governor and Commander-in-Chief on the 1st April, 1924.

The office of High Commissioner, which was formerly held by the Governor of Cape Colony, was, by a Commission dated the 6th October, 1900, vested in Lord Milner, and by a similar Commission dated the 15th March, 1905, in Lord Selborne. Since 1910 the Office has been vested, by separate Commission, in the successive Governors-General of the Union of South Africa.

2. **Principal Officers.**—The following list gives the names of the High Commissioner and the principal officers on his staff:—

High Commissioner.—Major-General the Earl of Athlone, G.C.B., G.C.M.G., G.C.V.O., D.S.O.

Imperial Secretary and Accountant.—Captain the Hon. B. E. H. Clifford, C.M.G., M.V.O.

Assistant Imperial Secretary and Chief Clerk.—Shirley Eales, O.B.E.

Auditor.—A. Warren.

CHAPTER I.

BASUTOLAND.

§ 1. History.

1. **Origin.**—The Basuto of Basutoland appear to have been composed of the remnants of several tribes which were broken up in the wars waged by Moselikatze, the King of the Matabele, in the early years of the last century. These remnants were united in about 1818 under Moshesh, a chief of great ability, who ruled for many years. In 1852 war broke out between Moshesh and the British Government; the Basuto were defeated by Sir G. Cathcart at the battle of the Berea Mountain, and Moshesh sent in his submission and made peace. A few years later, in 1856, disputes arose between Moshesh and the Orange Free State respecting boundary questions, and hostilities resulted which lasted from 1856 to 1858, with indecisive results, and were concluded by the *Treaty of Aliwal*, 1858. Collisions nevertheless frequently recurred.

In 1865 the war broke out afresh, and Moshesh again claimed the protection of the Governor, Sir Philip Wodehouse. He declined to interpose actively, but dispatched a British Commissioner to Thaba Bosigo, the capital of Basutoland, to settle the difficulties. This measure met with little success, and in the end the Boers were successful, and Moshesh sued for peace. At the Treaty of Thaba Bosigo, April, 1866, he recognized the permanent cession of a portion of his district and acknowledged himself a subject of the Orange Free State.

The peace was of short duration, the war was renewed, and the Basuto, pressed by the Boers, were on the brink of total defeat, when they again appealed to be taken under the authority of the Queen. In January, 1868, Sir Philip Wodehouse received authority to recognize Moshesh and his tribe as British subjects, and for the incorporation of their territory. This was carried into effect by a proclamation dated 12th March, 1868, and the event is now commemorated by observing this date as a public holiday, known as *Moshoeshoe's Day.*

2. **Annexation to the Cape Colony.**—The country remained in a very unsettled condition until it was annexed to the Cape Colony by an Act of the Cape Legislature, No. 12 of 1871. The Act expressly declared that Basutoland was not to be subject to the general law of the Colony, and gave the Governor power to legislate for it by proclamation, and to extend to it by proclamation any Cape Act not otherwise in force therein.

In 1884 the territory was disannexed from Cape Colony and the Government carried on under the direct control of the Imperial Government, *vide* Order-in-Council of February 2nd, 1884, which was proclaimed and brought into force by Proclamation 75A of March 18th, 1884.

§ 2. Description.

1. **Physical Features.**—Basutoland forms an irregular oval within the Union of South Africa; the main axis, about 150 miles in length, lying in a north-easterly direction. The Orange Free State Province, Natal and the Cape Province form its boundaries. Its area is 11,716 square miles, or nearly the same as that of Belgium.

It lies between 28° 35′ and 30° 40′ south latitude.

A portion of the great Drakensberg range of mountains forms the eastern boundary of Basutoland. Peaks in this range rise to heights of eleven and twelve thousand feet. Westward the country is occupied by the Malutis, mountains inferior in height to the Drakensberg. They form a jumbled mass so closely packed that the valleys are of the narrowest, and there is little ground which can be cultivated. It is only along the western border that mountains give place to hills and the cultivation of larger portions of land becomes possible.

2. **Meteorology.**—The range of temperature is approximately from a maximum of 93° F. to a minimum of 11° F. The average rainfall is 30 inches.

§ 3. Administration.

1. **Central and District Administration.**—The territory is now governed by a Resident Commissioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority, which is exercised by proclamation.

The chiefs adjudicate on cases between natives, with a right of appeal to the Magistrates' Courts, where all cases between the natives and Europeans are brought.

For fiscal and other purposes the country is divided into seven districts, namely, Maseru, Leribe, Mohale's Hoek, Berea, Mafeteng, Quthing, and Qacha's Nek. Each of the districts is sub-divided into wards, presided over by hereditary chiefs allied to the Moshesh family.

2. **Basutoland Council.**—There is a Basutoland Council consisting of a hundred members, all natives, ninety-five being nominated by the chiefs and five by the Government. The Council is consultative and advisory, and deals chiefly with the domestic affairs of the nation. It has no executive powers.

3. **Principal Officers.**—The following list gives particulars of the principal officers on the establishment:—

Resident Commissioner: John Christian Ramsay Sturrock.
Deputy Resident Commissioner: John Pears Murray, C.B.E.
Government Secretary: Reginald Montagu Bosworth Smith.
Financial Secretary: Thomas Alfred Williams.

Assistant Commissioners:

Leribe District.....	Frank Layton Foord.
Mafeteng District.....	Edward D'Urban Blyth.
Berea District.....	James Hugh Sims.
Mohale's Hoek District....	Andrew T. Bond.
Quthing District.....	Ernest Godfrey Dutton.
Maseru District.....	Hugh Ashton.
Qacha's Nek District.....	Frank Jenner.

Principal Medical Officer: Niel Morrison Macfarlane, M.D.
Superintendent, Leper Asylum: Peter Donald Strachan, M.D.

Medical Officers:

Leribe District.....	John Wightman Stirting.
Mohale's Hoek District....	Kenneth Dyke.
Mafeteng District.....	Harold Rundle Fitz Nattle.
Quthing District.....	Emile Edouard Charles Vollet.
Qacha's Nek District.....	Henry A. Murray.
Maseru District.....	Hamilton Dyke.

Principal Veterinary Surgeon: Frank Arthur Verney, O.B.E.
Director of Public Works: Harrison Wyatt Gibson.
Director of Education: Frederick Hugh Dutton, M.A.
Director Government Industrial School: H. R. Vimpany.
Comptroller of Stores: Stephen Bernard Dutton.
Agricultural Officer: Lawrence Ford Wacher.
Chief Clerk, Master of Court, and Registrar: Henry James Godden.
Accounting Clerk: Reginald Ernest Goodman.
Deputy Assistant Commissioner, Butha Buthe: Douglas Walsham How.

Inspectors of Police:

Lockhart Clementi.	Douglas St. Pierre Bunbury (Staff Officer).
Thomas Brereton Kennan, M.C.	Reginald Collier.
Francis Arthur Piers.	

Sub-Inspectors:

Rowland Webster Booth.	Harry Alston Smith.
Ernest Edward Strong.	Geoffrey Thomas Stanley Clarke.
Reginald Seymour Balfe.	Frederick Drummond Warren.
James Smith.	

4. **Capital.**—The Capital town is Maseru, which is the headquarters of the Government. It is situated on the Caledon River 86 miles by rail east of Bloemfontein. The population in 1921 was given as 399 Europeans, 1,890 natives, and 30 other coloured persons.

§ 4. Population.

General.—Censuses of the population of Basutoland were taken in 1904, 1911, and 1921, simultaneously with censuses taken in other parts of South Africa. No census was, however, taken in 1918. The following tables give particulars of the population at the three censuses mentioned:—

(i) POPULATION OF BASUTOLAND, 1904, 1911, AND 1921.

YEAR.	European.	NATIVE AND COLOURED			Grand Total.
		Bantu.	Mixed and Other Coloured.	Total.	
1904—					
Male	520	163,216	137	163,353	163,873
Female	375	184,515	85	184,600	184,975
TOTAL	895	347,731	222	347,953	348,848

§ 5. Vital Statistics and Migration.

1. **Births, Deaths and Marriages.**—The registration of births is not compulsory. Registers are kept in District Offices, but are only made use of by Europeans. The registration of deaths is also not compulsory, and no statistics can be given under these two heads.

All Christian and Civil marriages are registered in the Office of the Government Secretary, Maseru. The following figures represent the number of marriages so registered during the years specified :—

MARRIAGES REGISTERED IN BASUTOLAND.

Year	1917	1918	1919	1920	1921	1922	1923	1924
Number	574	486	734	688	492	639	630	724

Most of the marriages among the natives are contracted according to native custom, the usual dowry of cattle being paid.

2. **Migration.**—There are no restrictions governing the entrance of Europeans into Basutoland, excepting under a recent proclamation whereby all *former enemy aliens* must first obtain a permit from the Government Secretary before they can enter the Territory. Every native entering or leaving the Territory must be in possession of an official pass.

§ 6. Public Health and Sanitation.

1. **Basutoland Medical Service.**—The Basutoland Medical Service, which supervises the public health and sanitation of the Territory, is organized on a departmental basis. Administration is in the hands of the Principal Medical Officer, who is responsible for all expenditure under the Medical Vote. The Leper Asylum is a separate department with a special vote.

In addition to public health and sanitation, the Medical Department administers the Government Hospitals and Dispensaries, and provides free medical attendance for all Government officials and their families. The hospitals and dispensaries were primarily inaugurated to combat witchcraft, which was extensively practised when the present Administration took over Basutoland from the Cape Colony.

Beginning in 1885 with one medical officer and a so-called native hospital, which was little more than a couple of rooms, without nurses or proper furniture and appliances, the system has gradually developed, until now there are five Government Hospitals, which are well equipped on modern lines, and staffed, partly with trained European, and partly with native nurses. The Maseru Hospital is ranked as a Class I hospital by the Cape Medical Council. Each hospital has an out-patient department and dispensary, at which all Basutoland natives are treated at certain hours at a fee of 1s. for each attendance. Native in-patients pay nothing. A few beds are reserved for Europeans. Officials and their wives, when admitted to hospital, pay maintenance fees, which are based on a sliding scale; other European patients pay 15s. per diem.

All fees collected are paid into revenue. With the exception of these fees the whole cost of administration is borne by Government.

There is a Government Medical Officer for each district, and at some sub-stations there are private practitioners, who are paid at Cape District Surgeons' rates for attendance on officials and for medico-legal work.

BASUTOLAND HOSPITALS, 1924.

(*a*) Institutions and Staff—	Number.	(*b*) Patients in 1924—	Number.
Hospitals	5	In-patients	2,265
Beds	144	Out-patients	57,194
Medical Staff (all non-resident)	9		
Nursing Staff—		(*c*) Revenue and Expenditure in 1924–25.	
European	15		£
Native Dispensers and Assistants	11	Revenue	2,420
Other Native Employees	30	Expenditure (including Salaries of Medical Staff)	22,179

2. **Control of Public Health and Sanitation.**—This is provided for under the Medical and Pharmacy Proclamation, No. 17 of 1921, and the Public Health Proclamation, No. 18 of 1921.

§ 7. Education.

General.—The work of education in the Territory is carried out almost exclusively by the missionaries. In December, 1924, there were 522 elementary schools for native scholars, with 40,821 pupils on the roll, and six institutions with 601 pupils. The total average attendance in schools and institutions was 29,267. There is a Government Industrial School at Maseru, which was erected at a cost of approximately £10,000. Native youths are here instructed in carpentry, wagon-making, blacksmith's work, building and stone-cutting. There are six European schools with a total of 131 scholars.

§ 8. Labour and Wages.

General.—During the year ended 31st December, 1924, passes to leave the Territory were issued to 88,627 natives for the purpose of working on mines, farms, domestic and miscellaneous work. Labour passes issued during 1925 numbered 70,048. There is very little scope for labour in the Territory. Wages for road-making and general labour range from 1s. 3d. to 1s. 6d. per diem. The conditions governing the cost of living approximate those existing in the contiguous portions of the Orange Free State.

§ 9. Administration of Justice.

1. **Administration of Justice.**—The Basutoland Courts of law consist (*a*) of the Resident Commissioner's Court, which constitutes the Supreme Court of Basutoland, and from which an appeal lies to the Privy Council; (*b*) Courts of Assistant Commissioners, who may inflict sentences not exceeding two years imprisonment with hard labour, or fines not exceeding £50, with civil jurisdiction up to £500.

The laws administered are the same as the Cape of Good Hope up to 18th March, 1884, until repealed or altered by proclamation of the High Commissioner, who is also empowered to make by proclamation such laws as may be necessary for the peace, order, and good government of the Territory. Native law, so far as it is not repugnant to European law is administered by Basuto Chiefs and Headmen.

2. **Prisons.**—There are seven gaols and two lock-ups in the Territory, and regulations as to the government of prisons have been promulgated by High Commissioner's proclamation.

3. **Police.**—The Basutoland Mounted Police consists of the Resident Commissioner, as Commanding Officer, four inspectors and eight sub-inspectors, two chief constables, three constables, and 284 native non-commissioned officers and privates. There are also 57 temporary privates (un-uniformed, but wearing an arm badge).

§ 10. Defence.

Organization for Defence.—During the late war 165 Europeans went on active service, and 1,397 natives were sent overseas with the South African Native Labour Contingent. Besides these, a number of natives went to South-West and East Africa as drivers, and in other capacities, but no record of them is obtainable.

§ 11. Land and Agriculture.

1. **Land Settlement.**—There is no ownership or tenure of land in the Territory. Land is held under the communal system, and is apportioned to the people by the chiefs. There are no farmers in the country other than natives, the European population consisting mainly of Government officials, missionaries, traders, and labour agents.

No effort has as yet been made in the way of irrigation. The rivers are swift and generally flow between high banks. At the different Government stations a fair supply of good water is conveyed in pipes from fountains for domestic use.

2. **Agriculture.**—The principal agricultural and pastoral products are wool, mohair, wheat, maize, kaffir corn, cattle, sheep, and horses. The country is considerably overstocked at present. Efforts are being made by the Administration to improve the breed of horses by the introduction of good sires, the services of which are obtainable by the native for a nominal fee. Several thousand well-bred Merino rams were introduced some years ago, and distributed gratis among the native owners. This measure undoubtedly improved the wool, for which the Basuto obtain very good prices.

NUMBER OF LIVE STOCK AT CENSUSES OF 1904, 1911, AND 1921.

Year.	Cattle.	Horses.	Mules and Donkeys.	Sheep.	Goats.
1904	209,883	63,677	—	—	—
1911—					
Owned by Natives	432,748	86,610	1,307	1,363,680	987,009
Owned by Europeans	4,663	1,387	108	5,319	1,859
TOTAL	437,411	87,997	1,415	1,368,999	988,868
1921—					
Owned by Natives	574,415	152,325	6,284	1,854,426	894,257
Owned by Europeans (Villages only.)	6,251	1,408	300	5,286	1,101
TOTAL	580,666	153,733	6,584	1,859,712	895,358

3. **Forests.**—There are no forests, and there is very little indigenous wood. Government tree nurseries have been established, and endeavours are made to induce the natives to plant trees by supplying young trees free of cost. The land, however, is taken up for agriculture and pasture, and there is practically none to spare for forestry on any large scale.

4. **Mining and Industrial Activities.**—There are no mines in the Territory, and the chiefs and people are averse from prospecting of any kind. No industrial development has yet taken place.

§ 12. Commerce.

1. **Trade.**—There are 188 licensed traders in the territory who purchase the produce from the natives, and do a fairly large trade in blankets, clothing, prints, foodstuffs, etc.

2. **Imports and Exports.**—The following returns show the imports and exports for a series of years.

With regard to the imports, the values given in 1909 were oversea cost with the exception of colonial produce and manufactures. At present, however, the traders are only able to give the invoice cost of merchandise at the coast or wherever purchased.

The returns of exports hereunder were compiled from statistics furnished by the traders themselves; for, since the constitution of the Union of South Africa, Basutoland has received a certain proportion of the duties collected by the Union Government, and the usual customs statistics are no longer available. The last available statistics showed that in 1909 the total value of imports was £258,994, and of exports was £349,884. These figures have now been practically trebled. Wool and mohair represent the major portion of the increase in the exports.

§ 13. Railways, Roads, and Posts.

1. **Railways and Roads.**—There are no railways in Basutoland with the exception of one mile of the South African Railways which enters Basutoland at Maseru from the Orange Free State.

A good main road runs from Leribe in North Basutoland to Quthing in the south, connecting up all Government stations with the exception of Qacha's Nek, which is situated on the Drakensberg on the south-east border, and is only accessible to wheel traffic from East Griqualand. All the District stations lie on or near the border, and are connected by good roads with the nearest Union town or railway station.

The principal District stations after Maseru are: Leribe, about twelve miles from Ficksburg; Mafeteng, about sixteen miles from Wepener; and Mohale's Hoek, about thirty miles from Zastron.

Excepting the Orange River, at which there is a pont, all rivers of any size on the main road are bridged. The bridge over the Phuthiatsana or Little Caledon River, nine miles from Maseru, is deserving of notice, as being entirely of stone, and has one 80-ft. and two 40-ft. arches. The Caledon River, which forms the western and north-western borders, is bridged at Ficksburg near Leribe, Peka, and Maseru, the latter being a combined railway and road bridge. A causeway has been constructed over the Telle River, which forms the boundary between the Quthing and Herschel Districts.

2. **Posts, Telegraphs and Telephones.**—There are nine Post and Telegraph Offices, and a good many postal agencies. The postal service is administered by the Postmaster-General of the Union, and deposits and withdrawals may be made with the Union Post Office

Savings Bank at these offices. All the District offices are connected from north to south by telephone. The system is principally used by the Administration, but is also available for public use. Through telephone lines between Maseru and Ladybrand, Leribe and Ficksburg, and Mafeteng and Wepener have been completed. A new post office has been constructed at Maseru.

§ 14. Finance.

1. **Revenue.**—The Territory is financially self-supporting, the principal sources of revenue being the Native Tax, Customs, and Licences. The following table shows the Revenue collected under the different heads during a series of years :—

BASUTOLAND PUBLIC REVENUE, 1922–23 TO 1924–25.

Description.	1922–23.	1923–24.	1924–25.
	£	£	£
Native Tax	121,233	134,689	127,531
Customs and Excise	62,011	71,043	76,765
Posts and Telegraphs	7,522	8,038	8,520
Licences	7,097	7,585	7,928
Fees of Court or Office	814	783	906
Judicial Fines	1,305	2,009	1,991
Income Tax	3,755	6,773	12,997
Fees for services rendered	2,605	1,366	1,484
Interest	2,550	2,341	1,735
Wool Export Duty	—	14,128	17,189
Miscellaneous	3,645	3,858	3,962
TOTAL £	212,537	252,613	261,008

2. **Expenditure.**—The principal items of expenditure are Establishments, Police, Public Works, Medical Services, Education, and the Leper Settlement. Although a considerable amount has been expended annually as "Capital expenditure," the balance of assets in excess of liabilities on the 31st March, 1925, amounted to £78,575. The following is a statement of the expenditure in detail during a series of years :—

BASUTOLAND.—EXPENDITURE FROM PUBLIC FUNDS, 1922–23 TO 1924–25.

Description.	1922–23.	1923–24.	1924–25.‡
	£	£	£
Establishments	—	—	—
Resident Commissioner	12,554*	13,758	13,691
District Administration	12,934*	12,670	12,782
Police	35,647	36,189	36,760
Posts and Telegraphs	10,043	10,437	10,113

TOTAL £	224,547	241,669	250,053

* Previously shown as "Establishments."
† Provision now made under "Resident Commissioner." ‡ Subject to revision.

3. **Banking.**—There is a branch of the Standard Bank at Maseru ; and the Bloemfontein Board of Executors and Trust Company, Ltd., has opened a branch at the same place.

BECHUANALAND PROTECTORATE

CHAPTER II.

BECHUANALAND PROTECTORATE.

§ 1. History.

1. **Proclamation of British Protectorate.**—During the year 1885 Sir Charles Warren who was in command of an expedition dispatched from England to pacify Southern Bechuanaland, where for some time previously hostilities had been proceeding between the Bechuana and Boers from the South African Republic, visited the principal chiefs in Northern Bechuanaland (known as the *Bechuanaland Protectorate*), namely, Khama, Gaseitsiwe, and Sebele, and as a result a British Protectorate was proclaimed over their territories. No further steps were taken until the year 1891, when, by an Order-in-Council, dated 9th May, the limits of the Bechuanaland Protectorate were more clearly defined, and the High Commissioner for South Africa was authorized to appoint such officers as might appear to him to be necessary to provide for the administration of justice, the raising of revenue, and generally for the peace, order, and good government of all persons within the limits of the Order. Sir Sidney Shippard, the Administrator of Bechuanaland, was appointed Resident Commissioner. An Assistant Commissioner was also appointed for the Southern Protectorate and another for the Northern Protectorate, the laws in force in the Colony of the Cape of Good Hope on the 10th day of June, 1891, being declared in force in the territory, *mutatis mutandis*, and so far as not inapplicable. Subsequent legislation has been effected by proclamation of the High Commissioner.

2. **Relations with the British South Africa Company.**—For fiscal and other purposes the Protectorate was treated as a portion of the Crown Colony of British Bechuanaland until the 15th of November, 1895, when the latter was annexed to the Cape Colony. In the autumn of that year arrangements were made for the transfer of the administration of the Bechuanaland Protectorate, with the exception of certain reserves for native chiefs, to the *British South Africa Company*. The country occupied by the Bamalete Tribe, and so much of the Bora-Tshidi Barolong country as lies within the limits of the Protectorate, were transferred to the Administration of the *British South Africa Company*, Dr. L. S. Jameson being appointed Resident Commissioner therefor. The Company's police were moved down to a camp in the Protectorate, at Pitsane Potlugo. From that spot, on the 29th day of December, Dr. Jameson crossed the border of the South African Republic with his police, and marched towards Johannesburg, which was at the time in a state of great unrest. Being defeated by the Boers at Doornkop, he surrendered on the 2nd January, 1896. In consequence of this raid, the administration of the two areas above referred to was retransferred to the Imperial Government, by whom the Protectorate, in its entirety, is still governed under the name of the Bechuanaland Protectorate. It includes the Tati District, which is a portion of old Matabeleland conceded in 1887 by Lobengula to Mr. S. H. Edwards.

3. **Proclamation of Crown Lands.**—In 1895 the Chiefs Khama, Sebele, and Bathoen visited England, and each of them abandoned all rights and jurisdiction in and over certain portion of his former territory. The lands thus abandoned by them were, by Order-in-Council, dated the 16th day of May, 1904, declared Crown Lands, and all rights of His Majesty in or in relation thereto were vested in the High Commissioner for South Africa, who was empowered to make grants or leases of such lands on such terms and conditions as he might think fit, subject to any directions received from one of His Majesty's Principal Secretaries of State. Title to these lands was subsequently granted to the *British South Africa Company, Limited*, subject to certain reservations, and these lands are now known as the Tuli, Gaberones, and Lobatsi Blocks of farms.

By virtue of the Order-in-Council dated the 10th January, 1910, all other land situate within the limits of the Bechuanaland Protectorate, elsewhere than in the Tati District, was, and still is, vested in His Majesty's High Commissioner for South Africa, subject to all the provisions of the Order-in-Council of the 16th May, 1904, and to the following exceptions :—

(1) Such land as is either—
  (*a*) included in any native reserve duly set apart by proclamation; or
  (*b*) the subject of any grant duly made by or on behalf of His Majesty; and

(2) the forty-one farms known as "the Barolong Farms," held by members of the Barolong Tribe by virtue of certificates of occupation issued by the Chief Montsioa on the 28th day of March, 1895.

4. **Later Developments.**—During the period 1896–97 the existing railway line connecting the Union of South Africa with Rhodesia was constructed by the Bechuanaland Railway Company, authorized thereto by High Commissioner's proclamations.

In 1898 a limited number of farms were allotted at and in the neighbourhood of Ghanzi, in what was then the Ngamiland District of the territory, to settlers, some of whom had trekked thereto as prospectors in 1894.

In 1899 the boundaries of the Bamangwato, Batawana, Bakgatla, and Bangwaketse Native Tribes were established and defined by proclamation, and in 1909 the boundaries of the Bamalete Native Reserve were similarly fixed.

In 1911 the *Tati Concessions, Limited*, and its successors and assigns, were confirmed by Proclamation No. 2 of 1911 in the full, free, and undisturbed possession as owners of all the land within the Tati District, subject to all the terms and conditions of the said Proclamation, certain lands being assigned as a reserve for the occupation of natives. This reserve is under the control of the Government. The natives residing within it hold and occupy the land included therein, subject to such rules and regulations as are from time to time proclaimed by the High Commissioner; and, subject to certain conditions safeguarding the interests of the natives, the Company (now the *Tati Company, Limited*) retains the mining rights (including precious stones) over this native reserve.

In 1920 a European Advisory Council and a Native Advisory Council were established to advise the Resident Commissioner in matters affecting the Europeans and natives respectively.

§ 2. Boundaries, Area, and Physical Characteristics.

1. **Boundaries.**—The territory of the Bechuanaland Protectorate is bounded on the south and east by the Union of South Africa, on the north-east by Southern Rhodesia, on the north by the Zambesi and Chobe (Linyanti) Rivers, and on the west by the territory of South West Africa.

It has not been surveyed as a whole, but its area is estimated at 275,000 square miles. Its mean altitude is about 3,300 feet.

2. **Meteorology and Physical Features.**—The winter climate (May to August) is delightful. The heat during the other months is great, but there are occasional short, sudden and therefore treacherous changes from extreme heat to cold. Malarial fever is prevalent, being particularly severe in the neighbourhood of water-courses and other low-lying places, where, during and immediately after the season of the heavy rains (December to end of April), the dense bush, thick undergrowth, and rank vegetation afford excellent shelter to mosquitoes. The rainfall varies from 20 to 25 inches in a year, though heavier falls have been recorded.

The eastern portion of the territory has some fine hill scenery in comparatively close proximity to the Transvaal border. The remainder of the Protectorate, which, at first sight, appears to be perfectly flat, is, in reality, undulating, rich in grasses, shrubs, and trees, with occasional outcrops of limestone, but mostly of a sandy and waterless character. Old and well-defined river-courses indicate, however, that at one time the country was well watered, as indeed is still the case north and north-east of Lake Ngami.

§ 3. Administration.

The form of government is very similar to that which obtains in Basutoland. The territory is administered by a Resident Commissioner under the direction of the High Commissioner for South Africa, the latter possessing the legislative authority, which is

exercised by proclamation. There is also an Assistant Resident Commissioner, who is stationed at Francistown, and is Chief Magistrate of the Territory.

The territory is, for administrative purposes, divided into eleven districts, each with a resident magistrate, who is assisted in the maintenance of law and order by a force of police.

In view of the geographical position of that part of the mandatory territory of South West Africa East of longitude 21° East, known as Caprivi-zipfel, it was found expedient to provide in 1922 that the latter should be administered as if it were a portion of the Bechuanaland Protectorate.

The Headquarters of the Administration are at Mafeking, in the Cape Province.

PRINCIPAL OFFICERS OF THE ADMINISTRATION.

Resident Commissioner	Lieut.-Col. Jules Ellenberger, I.S.O., C.M.G.
Assistant Resident Commissioner	Lieut.-Col. R. M. Daniel.
Government Secretary and Director of Customs	C. L. O'B. Dutton.
Financial Secretary, Master of the Resident Commissioner's Court, and Registrar of Deeds	M. Williams.
Chief Clerk and Registrar	H. H. Price.
Crown Prosecutor	S. A. Minchin, LL.B.
Local Auditor	A. Warren.
Inspector of Education	F. H. Dutton, M.A.
Controller of Stores	A. E. Fosdike.
Resident Magistrate, Francistown District	Captain G. B. Moseley.
Resident Magistrate, Ngamiland	Captain H. B. Neale.
Resident Magistrate, Gaberones District	E. O. Butler.
Acting Assistant Resident Magistrate, Gaberones District	W. E. Mangan.
Resident Magistrate, Ngwaketsi District	Inspector G. E. Nettleton.
Resident Magistrate, Ngwati District	A. L. Cuzen.
Resident Magistrate, Lobatsi District	Captain R. O'M. Reilly.
Acting Resident Magistrate, Chobe District	Major H. D. Hannay.
Acting Resident Magistrate, Tuli Block District	E. H. M. Drury, M.B.E.
Resident Magistrate, Kweneng District	Captain A. G. Stigand.
Resident Magistrate, Ghanzi District	C. M. Ledeboer.
Acting Resident Magistrate, Kgalagadi District	Sub-Inspector W. H. Ellam.
Inspectors, B.P. Police	H. D. Hannay, G. E. Nettelton (Hon.).
Sub-Inspectors, B.P. Police	H. B. Poole, V. G. Gash, J. W. Potts, G. C. Guilbert, V. Ellenberger, H. Beeching, C. E. Betts (Hon.).
Principal Medical Officer	Donald M. MacRae, M.D., M.S.
Medical Officer, Gaberones	Duncan M. MacRae, M.A., M.D., B.S.
Medical Officer, Serowe	Desmond Drew, B.A., M.B., B.Ch.
Medical Officer, Francistown	P. Targett Adams, M.D.
Medical Officer, Ngamiland	Stanley Bachelor, M.C., M.D., F.R.C.S. (Edin.), M.R.C.S., L.R.C.P., B.S.
Chief Veterinary Officer	W. H. Chase, O.B.E., F.R.C.V.S.
Veterinary Surgeons	F. M. Hill, M.R.C.V.S.; H. M. Webb, M.R.C.V.S.
Cattle Export Inspectors	R. J. Davys, A. K. F. Hurndall.
Stock Inspectors	C. E. Betts (honorary rank of Sub-Inspector, also acts as Scab Inspector), A. Rutherford, W. Johnstone.
Scab Inspectors	R. V. Ramsbotham, C. J. Nelson.
President of the Special Court of the Bechuanaland Protectorate	G. T. Morice, K.C.
Principal of Bakgatla National School, Mochudi	R. S. Steensma, B.A.

§ 4. Population.

General.—The following gives particulars regarding the population of the Protectorate according to the censuses taken in 1911 and 1921 :—

(i) POPULATION—CENSUSES OF 1911 AND 1921.

Year.	European.	Bantu.	Asiatic.	Other Coloured.	Total.
			355		
1911....	1,692	123,303			125,350
1921....	1,743	150,185	52	1,003	152,983

(ii) BECHUANALAND—NATIVE POPULATION BY DISTRICTS, SEX, AND AGES, CENSUS OF 1921.

District.	Male.		Female.		Total.
	Under 16.	16 and over.	Under 16.	16 and over.	
Bamangwato Reserve	12,413	19,210	10,117	16,307	58,047
Bakwena Reserve	2,803	2,675	2,401	3,283	11,162
Bangwaketsi Reserve	4,581	4,003	3,878	5,004	17,466
Bakgatla Reserve	3,091	2,417	3,073	3,023	11,604
Bamalete Reserve	1,327	708	1,265	1,278	4,578
Batawana Reserve	3,550	5,433	3,244	5,222	17,449
Batlokwa	284	256	285	374	1,199
Tati District	2,870	3,579	2,468	2,960	11,877
Tuli Block	229	650	202	293	1,374
Gaberones Block	61	189	50	92	392
Lobatsi Block	264	280	224	233	1,001
Barolong Farms	846	630	740	938	3,154
Ghanzi District	350	543	302	503	1,698
Kazungula District	432	690	386	607	2,115
Nekati	177	199	185	275	836
Molopo Strip	408	242	321	314	1,285
Lehututu District	1,008	921	836	1,239	4,004
Railway Strip	165	373	170	236	944
TOTAL	34,859	42,998	30,147	42,181	150,185

The European or white population of the territory is widely scattered.
The principal native villages are :—

	Tribe.	Estimated Population.
Serowe	(Bamangwato)	25,000
Kanye	(Bangwaketse)	12,000
Molepolole	(Bakwena)	9,000
Maun	(Batawana)	5,000
Mochudi	(Bakgatla)	8,000
Ramoutsa	(Bamalete)	3,500

§ 5. Vital Statistics and Migration.

1. **Registration of Births, Deaths, and Marriages.**—The registration of births is voluntary and governed by Act No. 20 of 1880 of the Colony of the Cape of Good Hope, which is applicable to the Bechuanaland Protectorate.

The only details registered are those of non-natives.

The solemnization of marriages is governed by Proclamation No. 1 of 1917, as amended by Proclamations Nos. 14 of 1917 and 72 of 1922. Most natives secure their brides by the payment of " bogadi " cattle to her parents.

2. **Migration Regulations (Europeans).**—There are no Migration Regulations concerning the entrance of Europeans into the Bechuanaland Protectorate.

§ 6. Public Health.

1. **Public Health Laws.**—The provisions of the Public Health Acts of the Colony of the Cape of Good Hope passed previous to 10th June, 1891, are, *mutatis mutandis*, in force within the territory; and the provisions of Part I of the *Police Offences Act*, No. 27 of 1882 have been applied by proclamation to the areas of Gaberones, Francistown, Lobatsi, and Palapye Road. By Proclamation No. 12 of 1924, the Resident Commissioner is empowered —subject to the approval of the High Commissioner—to make regulations for the purpose of preventing the introduction into or dissemination within the territory of any infectious or contagious disease, and, subject to the like approval, to make local public health regulations.

No one may practise within the territory as a physician, surgeon, apothecary, chemist, or druggist without being licensed to do so, and to that end must first produce his diploma to the Resident Commissioner.

2. **Hospitals and Medical Service.**—There are no hospitals in the territory, apart from a small one at Gaberones. The more serious cases are removed to the Victoria Hospital at Mafeking, towards the erection of which the Bechuanaland Protectorate Administration made a substantial contribution, and towards the maintenance of which it makes an annual grant of £25.

The Principal Medical Officer resides at Mafeking. There are medical officers at Gaberones, Serowe, Francistown, and Maun. Apart from these, railway medical officers travel up and down the railway line.

§ 7. Education and Religion.

1. **Schools.**—In 1924–25 there were in the territory 12 schools for Europeans, each in receipt of a Government grant-in-aid. These were attended by approximately 200 children. There were 85 native schools attended by 5,682 children. The schools for European children received Government grants-in-aid, which amounted to £1,523.

With the exception of a grant from Revenue of £300 to the London Missionary Society and the payment of the salary of the Principal of the Bakgatla National School at Mochudi, which school was erected and equipped by the Bakgatla Tribe, the native schools were supported from the native fund, from which the sum of £4,520 was spent on education and the upkeep of the school buildings, £150 going to the native institution at Tiger Kloof for the training of teachers. In addition, the Bamangwato themselves entirely defray the cost of the upkeep of the Khama Memorial School, which is a very fine building with a large attendance of scholars.

Most of these schools are making good progress, but the custom of the Bechuana of sending a great number of their boys to distant cattle posts for the whole year, and of taking their families with them to their lands for long periods of the school-year, greatly retards material improvement. The number of schools has increased, with a slight increase of pupils, but many of these schools are not in being for the whole year. Making due allowance for the seasonal variation in attendance, there seem to be signs of the awakening of a new spirit among the Bechuana in regard to education.

At the census of 1921, 16,344 males and 20,175 females were returned as literate and 60,684 males and 52,982 females as illiterate.

2. **Churches.**—Religious work is carried on in the territory by representatives of various denominations. There are churches for Europeans at Francistown and Serowe, and clergymen of the Anglican and Wesleyan Churches occasionally hold services for Europeans along the railway line. As regards natives, each principal village has a spacious church building, paid for chiefly by the natives themselves; and places of worship are also to be found in the majority of the smaller villages.

§ 8. Labour and Wages.

1. **Labour in the Protectorate.**—The European population of the Protectorate being small, and there being no industries of any magnitude in the territory, the demand for native labour within its borders is consequently restricted, and confined chiefly to work in farming operations within the comparatively small areas open to white settlers in the Francistown and Ghanzi Districts and in the Tuli, Gaberones, and Lobatsi blocks of farms.

2. **Labour Recruiting.**—The Protectorate offers a large field of operations, however, for recruiters of native labour for work on the mines and elsewhere outside of the territory; but no person may act as a labour agent within the Protectorate unless he is the holder of a current, non-transferable, licence for that purpose, issued to him by the Resident Commissioner or by some officer duly authorized by the Resident Commissioner to issue such licences.

Any person applying for a labour agent's licence is required to deposit £100 or to find security to the like amount to the satisfaction of the Resident Commissioner or other authorized officer, and must also fix a *domicilium citandi et executandi* within the territory where all civil process in respect of any breach of contract or recovery of wages may be served. Every application for such licence must be accompanied by a statement in writing, signed by the proposed employer, giving his name and address, the nature of the proposed employment, the rate of wages at which the native labourers are to be engaged, and any further particulars as to the proposed terms of service which the officer issuing the licence may demand. No concession or contract by which any native chief or headman purports to bind himself or his people to provide labourers is valid.

The native tribes of the territory are well behaved as a whole, ready to act on the advice of the Resident Commissioner and of his officers, and the Administration is therefore in the happy position of being free from labour problems which affect other countries.

3. **Wages and Cost of Living.**—The conditions as to wages and the increase caused by the war in the cost of foodstuffs and other necessaries of life are, to all intents and purposes, similar to those at present existing in the Union of South Africa.

4. **Sale of Intoxicating Liquor.**—No intoxicating liquor may be introduced into the territory without the permission in writing of the Resident Commissioner, of an Assistant Commissioner, Magistrate, or Commissioned Officer of Police. The sale or gift of liquor to any native is strictly prohibited. By the word "native" is understood "any aboriginal native belonging to any native tribe, including half-castes and all persons of mixed race living as members of any native community, tribe, kraal, or location."

Apart from the licence issued to the Rhodesia Railways, Limited, for the sale of refreshments on passenger trains running through the Bechuanaland Protectorate, there are only seven licences for the sale of liquor in the territory. These are granted in respect of premises along the railway line at places where accommodation is necessarily provided for travellers.

§ 9. Administration of Justice.

1. **Courts of Law.**—The Resident Commissioner exercises all the powers of the Supreme Court of the (late) Cape Colony, but no original civil action, suit, or proceeding can be instituted in his Court, and, except in cases of murder, it is not competent to institute or bring any criminal proceedings before his Court in the first instance, or otherwise than by way of review or appeal from the decision of a Court of Assistant Commissioner, Resident Magistrate, Assistant Resident Magistrate, or Special Justice of the Peace.

Until 1912 Assistant Commissioners and Resident Magistrates had jurisdiction in all civil and criminal cases, except murder, subject to the right of appeal to the Resident Commissioner and to the Sovereign-in-Council; but their jurisdiction did not, and does not, extend to any matter in which natives of the same tribe were concerned, unless in the opinion of such Court the exercise of such jurisdiction was necessary in the interests of peace or for the prevention or punishment of acts of violence to person or property.

Until 1912, also, the trial of every person charged with murder had, under section 4 of the *Bechuanaland Protectorate Proclamation*, No. 2 of 1896, to be held before a Court consisting of the Resident Commissioner, as President, and any two Assistant Commissioners or Resident Magistrates of the territory. But since 1912 a Special Court, called the *Special Court of the Bechuanaland Protectorate*, was established for the trial of such cases (civil and criminal) as are hereinafter mentioned and (save as hereinafter otherwise stated) to exclude such cases from the jurisdiction of the Courts of Resident Commissioner, Assistant Commissioner, and Resident Magistrate. The Special Court is held at such time and at such place or places as are publicly notified by the Resident Commissioner, and consists of a Judge or Advocate of the Supreme Court of South Africa, appointed by the High Commissioner to be President of the Court, and any two Assistant Commissioners nominated by the Resident Commissioner.

Such Court has jurisdiction in respect of—

(*a*) civil actions in which either party is a European, and in which the claim or value of any property in dispute exceeds £1000, or in which the action is for the divorce of persons joined in matrimony or for a declaration of nullity of marriage;

(*b*) criminal cases in which the accused is a European and is charged on indictment with any of the following offences: treason, murder, culpable homicide, rape, perjury, arson, offences relating to the coinage, and if the property, the subject of the offence, exceeds £1000, theft, receiving stolen property knowing the same to have been stolen, robbery, forgery, uttering forged documents knowing the same to be forged, fraud, and attempts to commit any of the aforesaid offences;

(*c*) Such cases pending in the Court of Resident Commissioner or in the Court established under section 4 of Proclamation No. 2 of 1896 as such Court may, on its own mere motion, remove to the said Special Court;

(*d*) such civil actions pending in any Court of Assistant Commissioner or Resident Magistrate in which either party is a European as such Court may, either on application to it by either party to the action or on its own mere motion, remove to the said Special Court;

and neither the Court of the Resident Commissioner nor a Court of Assistant Commissioner or Resident Magistrate now has jurisdiction in any cases mentioned in (*a*) or (*b*) above, otherwise than for conducting a preliminary examination, unless both of the parties or the accused, as the case may be, apply to have the case tried before such Court and such Court grants such application where the case is within its jurisdiction.

A right of appeal to the Privy Council lies against any final judgment, decree, sentence, or order of the said Special Court.

When the Special Court is not sitting, any Court of Assistant Commissioner or Resident Magistrate may hear and determine—

(*a*) all motions and applications (including applications for arrests and interdicts of persons and things) in respect of any claim, debt, or matter in dispute which is within the jurisdiction of the said Special Court, whether an action in respect thereof is pending in the said Special Court or not;

(*b*) all actions for provisional sentence which are within the jurisdiction of the said Special Court;

(*c*) all trial cases commenced in the said Special Court in which either the plaintiff or the defendant is in default or in which consent to judgment is filed by the defendant; where such Court would but for the provisions above cited have had jurisdiction to hear and determine such case;

and in all such cases an appeal lies from the decision of a Court of Assistant Commissioner or Resident Magistrate to the said Special Court.

The rules of the Cape of Good Hope, Provincial Division, of the Supreme Court of South Africa in force on the 1st day of October, 1912, apply, *mutatis mutandis*, in the Special Court of the Bechuanaland Protectorate.

The rules, orders, and regulations respecting the manner and form of proceeding in civil and criminal cases before the Court of the Resident Commissioner are, *mutatis mutandis*, and as far as the circumstances of the territory admit, the same as those of the Supreme Court of the Colony of the Cape of Good Hope, and the procedure in the Courts of Assistant Commissioners and Resident Magistrates is, subject to a similar proviso, the same as that which was in force in the said Colony on the 10th day of June, 1891. Under High Commissioner's Notice No. 151 of 1925 (published in the *Official Gazette* of the 9th October, 1925) a Rule of the Court of the Resident Commissioner provided scales of fees and charges to be taken and made by attorneys of the Courts of the Bechuanaland Protectorate in civil cases where the cause of action exceeds £50, and in applications for compulsory sequestration and voluntary surrender of estates as insolvent.

Courts of Assistant Resident Magistrates, first established in 1898, have such jurisdiction in all matters and cases, civil and criminal, as was conferred prior to the 10th day of June, 1891, on the Courts of Resident Magistrates of the Colony of the Cape of Good Hope, but their jurisdiction does not extend to cases in which natives belonging to one and the same tribe are concerned, except where it is necessary in the interests of peace or for the prevention or punishment of acts of violence to person or property.

The native chiefs adjudicate on cases arising among natives of their respective tribes, and legislation has recently been introduced which provides for appeals against judgments of native chiefs in the Bechuanaland Protectorate. Such appeals lie in the first instance to a Court composed of the Assistant Commissioner or Magistrate of the district and of the chief whose judgment is appealed from. If the Assistant Commissioner or Magistrate and the chief agree, but the complainant is dissatisfied with their decision, a further appeal lies to the Resident Commissioner. In the event of the Assistant Commissioner or Magistrate and the chief disagreeing, then the Resident Commissioner decides the matter in dispute.

The jurisdiction of Special Justices of the Peace in the Bechuanaland Protectorate is similar to that which was conferred on Special Justices of the Peace of the Cape Colony prior to the 10th June, 1891; the punishment which may be inflicted by them on offenders is a fine of £2 or imprisonment with or without hard labour for one month, and all cases tried by them must be sent for review.

Apart from the Resident Commissioner's Court and the Special Court of the Bechuanaland Protectorate, there are in the territory one Court of Assistant Resident Commissioner; eleven Courts of Resident Magistrate [at Gaberones, Kanye, Maun (Ngamiland), Serowe, Lobatsi, Molepolole, Selika, Francistown, Kasane, Lehututu, and Ghanzi]; one Court of Assistant Resident Magistrate (at Gaberones).

There are also a number of Justices of the Peace throughout the territory.

CRIMINAL CASES ADJUDICATED UPON IN BECHUANALAND PROTECTORATE, 1919–20 TO 1924–25.

1919–20.	1920–21.	1921–22.	1922–23.	1923–24.	1924–25.
499	434	410	736	590	479

These figures do not include cases tried by native chiefs in accordance with native law.

2. **Prisons.**—There is a prison at Francistown and another at Gaberones. At other centres there are lock-ups. The Prison Regulations published under Government Notice No. 1108 of 13th November, 1893, framed under and by virtue of the provisions of Act No. 23 of 1888 of the Cape Colony, are in force, in so far as applicable, throughout the Bechuanaland Protectorate.

§ 10. Defence and Police Organization.

1. **General.**—There is no Defence Force. For the maintenance of law and order, however, there is a force of police known as the *Bechuanaland Protectorate Police*, numbering 227. This force is under the direct control of the Resident Commissioner, and Part 2 of the *Cape Mounted Riflemen Act* (Cape of Good Hope), No. 9 of 1878, is, *mutatis mutandis*, in force and applicable to all members of the police. There are 8 European officers and 18 European non-commissioned officers and men; also 50 native non-commissioned officers and men mainly drawn from Basutoland. In addition, there are 180 Bechuana employed as dismounted constables. The police are stationed in small detachments at various posts in the territory.

2. **Arms and Ammunition.**—No arms or ammunition may be brought into the territory or delivered to anyone within its boundaries without the permission in writing of the Resident Commissioner or of an Assistant Commissioner or Magistrate duly authorized by the Resident Commissioner to grant such permission.

§ 11. Land and Water Supply.

1. **Land Tenure.**—The amount of transfer duty payable in the territory is two pounds per centum.

No policy has yet been disclosed as regards the Crown Lands defined by the Order-in-Council of the 10th January, 1910, and no occupation or ownership or claims of right to occupation or ownership by any person of European birth or descent in respect of any land within the limits of the territory and no concession or grant of any right, title, or privilege to deal with or authorize the occupation or ownership of any such land can be recognized as valid or legal unless or until approved in such mode as has been or may hereafter be appointed by the High Commissioner.

Outside of the Native Reserves no tribal claims to land in the Protectorate can be acknowledged by His Majesty's Government unless such claims are based upon an occupation commencing at a date prior to the Proclamation of the High Commissioner constituting such land a Protectorate or incorporating such land in the Protectorate, or unless such land has been subsequently occupied with the express consent of the High Commissioner.

No concession by any native chief whether or not accompanied or supported by any power of attorney or instrument or document of procuration and no power of attorney or instrument or document of procuration granted by any such chief coupled with an interest in favour of some other person whether such interest be apparent or not in the face of such power, instrument, or document, can be recognized by any Court of Law unless and until sanctioned and approved by His Majesty's Secretary of State.

The Native Reserves are held under tribal tenure and are inalienable. No person of European birth or descent may carry on business of any description therein without having first obtained the consent of the chief and his councillors.

2. **Water Supply.**—There are no irrigation works in the Protectorate. Apart from the rivers Marico, Limpopo, Zambesi, and Chobe, and apart from the Okavango marshes and their outlets, there are practically no surface waters in the territory, except in the rainy season. In the dry season, when the rain-pools disappear, water can, however, usually be had at no great depth by sinking in the sandy beds of the larger rivers.

Water-boring and well-sinking operations, in comparatively close proximity to the eastern border of the territory, have given good results in some localities, but have proved utter failures in others, solid red granite being often encountered.

Several attempts have been made by the Administration to open up the waters to the west, through the Kalahari. These have yielded only meagre results. The water struck was sometimes very brackish. It is possible, however, and the opinion has often been expressed, that by deep boring the waterless and useless tract of land now known as the Kalahari Desert may yet be transformed into one of the finest ranching countries in the world.

3. **Schwarz Scheme.**—In 1925 a reconnaissance into the Kalahari was undertaken by the Union to test the proof of a scheme suggested by Professor E. H. L. Schwarz, of Rhodes University College, Grahamstown, Cape Province, who has advanced the interesting theory that by a diversion of the flood-waters of certain of the rivers now flowing into the Zambesi, and which he considers at a recent period discharged into the lakes and pans of

the Kalahari, these sheets of water would be greatly enlarged and restored again to their former size; that a large part of the surrounding country, now arid, would immediately become available for settlement, and that the presence of these large bodies of water would encourage the precipitation of moisture over certain parts of the Union. The personnel of the reconnoitring party consisted of Dr. A. L. du Toit, geologist (also functioning as officer in charge); C. Sholto Douglas, engineer; S. H. Noaks and L. L. R. Buckland, assistant engineers; C. L. Stegman, meteorologist; C. Volk, motor mechanic; and S. Hattingh, foreman of surveys. For a short time Professor Schwarz accompanied the party, which in its survey work was ably assisted by two aeroplanes of the Union Defence Force under the pilotage of Captain Meredith and Lieutenant (now Captain) Tasker. The report issued on the project was not favourable, although it was conceded that certain proposals might prove successful in limited areas, but in no case was it considered that any direct benefit from the scheme would accrue to the Union.

§ 12. Agriculture and Pastoral Production.

1. **Agriculture.**—Although maize, kaffir corn, beans, pumpkins, and melons are reaped in large quantities by the natives when the season is favourable, yet the rainfall is insufficient, or too uneven and uncertain in its distribution, to render agriculture anything but a hazardous pursuit.

2. **Live Stock.**—The number of horned cattle, according to the census in 1911, was 323,911, notwithstanding the fact that, fifteen years before, rinderpest had swept through the territory, carrying off approximately 95 per cent. of its cattle. There were also, in 1911, 358,336 sheep and goats. According to the census taken in 1921, the following live stock was owned by natives and Europeans in the territory:—

BECHUANALAND—LIVE STOCK OWNED BY EUROPEANS AND NATIVES, CENSUS OF 1921.

Heading.	Cattle.	Sheep.	Goats.	Horses and Mules.	Donkeys.
Owned by Natives.....	426,344	120,186	237,740	2,264	6,206
Owned by Europeans.....	68,718	12,268	10,231	493	2,278
TOTAL.....	495,062	132,454	247,971	2,757	8,484

3. **Export of Cattle.**—For several years prior to 1917–18 the only horned cattle which the Union Government would permit to enter the Union from the Protectorate were slaughter cattle consigned in sealed trucks to approved abattoirs, where the animals had to be slaughtered immediately on arrival. In that year, however, the Union Government, recognizing that the Southern Protectorate was a clean cattle district, decided to allow the introduction therefrom of breeding animals as well as slaughter cattle, and subsequently extended this concession to animals from Ngamiland. On 1st June, 1917, a quarantine camp was established at Ramathlabama, on the southern boundary of the territory, the conditions of export being that the animals should serve a fourteen days' quarantine in a fenced camp, that they should be inspected by a veterinary surgeon on entry and before release, and that during the period of quarantine they should be daily under the supervision of a competent stock inspector.

Owing, however, to the cattle surplus in the Union, the export of Protectorate cattle to the open markets of the Union was stopped in February, 1923, when the Ramathlabama quarantine camp was closed. In addition and for a similar reason, restrictions as to weight and condition were imposed on Protectorate slaughter cattle on 1st March, 1924. All exported animals, except those intended for overseas, have now to scale a minimum of 800 lb. live weight, and the carcass must dress 50 per cent. of the estimated live weight.

A duty of 2s. 6d. was payable upon every head of cattle exported from the territory, and no cattle may be exported therefrom except through a port of exit appointed by the High Commissioner. By Notice No. 79 of 1925, however, this duty was suspended for one year as from the 1st April, 1925. There are at present three such ports of exit, namely, Ramathlabama, on the southern boundary of the territory (sixteen miles north of Mafeking), and Kazungula and Muhembo, in the north of the territory.

4. **Licensed Sale of Stock.**—Persons, other than those licensed as general traders or butchers within the territory, who desire to purchase, or acquire by exchange or barter, live stock within the Protectorate, for export therefrom, are required to obtain a licence to do so. Applicants for such licences deposit £100, or find security to the like amount to the satisfaction of the Resident Commissioner or other authorized officer, and are required also to fix a *domicilium citandi et executandi* within the territory. Such deposit or security may be taken in execution in whole or in part for the purpose of satisfying judgments of any competent Court within the Bechuanaland Protectorate whereby the person who made such deposit or found such security is required to pay any sum, whether by way of damages, costs, or otherwise, to any person domiciled within the Protectorate. An applicant is further required to have been duly registered as the proprietor of a brand within the Protectorate. Purchase for export licences cost £25, but the High Commissioner may order that they shall be issued, for any calendar year or portion thereof, without payment of any fee therefor. They are not transferable, and are issued subject to such conditions as to the local limits within which cattle may be purchased or acquired as the Resident Commissioner may impose, and the issue or renewal thereof may be refused without any reason being given.

The term " live stock " includes any horse, mare, gelding, colt, filly, mule, or ass ; any bull, cow, ox, heifer, or calf ; and any sheep or goat.

Horned cattle to the number of 17,993 were exported from the territory to the Union of South Africa in the year 1924–25, as against 26,404 in 1923–24, and 7,169 to other destinations through the port of exit at Kazungula ; 14,157 sheep and goats were exported to the Union in 1924–25, as against 9,162 head in 1923–24, and 9,185 were exported to Rhodesia, as against 11,488 in 1923–24.

5. **Restrictions on Import.**—As a precautionary measure against the introduction of contagious animal diseases—especially East Coast fever, the spread of which to the territory the Administration has so far succeeded in preventing—no cattle, sheep, pigs, goats, horses, mules, and donkeys, and no hay, horns and skins, and no vehicle (except railway vehicles and motor-cars) or wagon-gear, cart-gear, or harness, may be introduced into the Bechuanaland Protectorate without the written permission of the Resident Commissioner or other duly authorized officer ; and no horned cattle may be removed from one district to another within the territory without the permission in writing of an Assistant Commissioner or magistrate or other authorized official. The Resident Commissioner has power to order, in case of emergency, that all movement of cattle from any place to any other place within the territory be forthwith stopped.

6. **Equines.**—Equines are very liable to contract the disease of horse-sickness in the territory, and it is generally fatal. There are consequently and comparatively speaking very few horses and mules in the Protectorate.

7. **Forest Resources.**—The territory is well wooded, and a large quantity of dead wood for fuel is exported by rail from the Southern Protectorate. A considerable quantity of timber suitable for mining props is also sent out of the country.

8. **Co-operative Societies.**—The formation, registration, and management of Co-operative Agricultural Societies within the territory are governed by Proclamation No. 2 of 1910.

§ 13. Mines.

Gold and Silver.—The only portion of the territory in which gold mining has, so far, been carried on, is the Tati district. This has been done, on a small scale, for years. The output for the year 1924–25 was 1,372 oz. of gold and 250 oz. of silver, of a total value of £5,799.

§ 14. Trade.

The imports consist chiefly of blankets, articles of clothing, ploughs, iron and tin ware, and groceries. The exports consist mainly of horned cattle, small stock, hides, skins, dairy products, and wood, and, in seasons of abundant harvest, a certain quantity of maize and kaffir corn is exported.

The Bechuanaland Protectorate is a native territory the inhabitants of which are mainly engaged in cattle rearing. To the improvement of native stock, the distribution among the various tribes of pure-bred bulls purchased out of a fund maintained by the natives themselves, and the restriction of cattle exportations to the Union to a certain weight of animal, contribute in different ways. For veterinary reasons, the export of cattle to the Union is further restricted to consignments intended for approved abattoirs, and (without restriction as to weight) for export overseas, while to South West Africa and Southern Rhodesia it is absolutely prohibited. There is unrestricted export through Northern Rhodesia to the Belgian Congo, except that the Government of the former territory

require that, in order to conserve the grazing on their side, cattle so exported shall not exceed a fixed number in one year, but numbers of Protectorate cattle also find their way to the Congo market through Angola. As a result of all these limitations, some of which are of recent imposition, the cattle trade is not yet what it might be, and, indeed, during the financial year 1924–25 suffered a diminution of some 25 per cent. in numbers.

The export of sheep and goats, on the other hand, showed an increase all round of 13 per cent., for which a considerably increased export to the Union was mainly responsible, exportations to Rhodesia having fallen off over 20 per cent. There is a small export of pigs, mostly to the Union, which showed improvement.

The financial year opened with a bad drought and a heavy locust infestation, which did serious damage to such grazing as survived. Had not the succeeding rainy season been a record one, the trade in live stock must have been extremely poor, having regard to the cattle restrictions in weight. The hides and skins of the stock which die of starvation are, however, marketable, and these were exported to the value of £22,117, as compared with £16,400 in the previous year.

The trade in dairy products by the European settlers is promising. The exports as compared with the previous year are as follows :—

	1923–24.	1924–25.
Cheese	£3,466	£2,844
Butter	202	235
Butter-fat and cream	14,303	20,359

Skins and karosses of wild animals were exported to the value of £12,819, as compared with £5,582 in the previous year. There is a considerable export of firewood, i.e. dead trees, bringing into the territory some £4,000 a year. The only minerals produced are gold and silver in the Tati District. They both show a large decrease as noted elsewhere.

Crops, as the result of the plentiful rains, though to some extent damaged by rot, yielded a handsome surplus over the food requirements of the native population, for which they are normally grown, and with the aid of very substantial reductions which have been made in the railway rates, an export trade in grain may be established, if the market conditions permit. As an experiment, cotton has been sown fairly extensively by European settlers, with encouraging results.

The reduced railway export rates for grain are also applicable to dried locusts, and as a market exists for this commodity in Holland there are possibilities of trade developments in this direction, as the natives will readily collect them, but an expensive supply of bags would seem to be necessary unless the railways can accept the traffic in bulk, i.e. in truckloads. At present the locusts collected and traded are found to be valuable food for cattle and poultry.

The business done at the traders' stores in the territory has shown much improvement during the year. The goods imported by these stores amounted to £220,000, as against £166,000 in 1923–24.

For Customs purposes the territory is dealt with, by agreement, as a part of the Union of South Africa, the Treasury of the Union paying out quarterly to the Bechuanaland Protectorate a sum bearing to the total Customs revenue of the Union in each year the same proportion as the average amount of the Customs revenue of the territory for the three completed financial years last preceding the taking effect of the South Africa Act, 1909, bore to the average amount of the whole Customs revenue for all the Colonies and Territories included in the Union received during the same period. That proportion is .27622 per cent. of the total Customs revenue of the Union. The territory collects its own Customs duties on spirits and beer manufactured in the Union of South Africa, or in any British Protectorate or Possession in South Africa, the Government of which has entered into a Customs agreement with the Union.

§ 15. Railways and Roads.

1. **Railway Construction.**—On 3rd August, 1894, an agreement was entered into between the High Commissioner for South Africa as Governor of British Bechuanaland, the British South Africa Company, and the Bechuanaland Railway Company (now Rhodesia Railways, Ltd.), for the construction and working of a railway by the railway company from Vryburg in British Bechuanaland, to Palapye in the Bechuanaland Protectorate. This agreement was later supplemented by an amending agreement between the same parties. These two documents form the schedule to Proclamation No. 227 of British Bechuanaland.

The railway line having been constructed, under the provisions of that Proclamation, from Vryburg to Ramathlabama—upon the southern boundary of the Bechuanaland Protectorate—the Bechuanaland Railway Company was authorized and empowered by a Proclamation dated the 23rd November, 1896, to construct, equip, maintain, and work, subject to the provisions thereof and to the terms of the two agreements alluded to, a line of railway from the southern boundary of the territory to a point at or near Palapye, and,

for that purpose, to enter upon and take possession of land of a uniform width throughout of one hundred yards, and such land in addition as might be required for all junctions, sidings, and stations, and for all other works and approaches.

The extension of this line by the Bechuanaland Railway Company to the northern boundary of the Bechuanaland Protectorate, was authorized by a subsequent Proclamation ; and in view of the Matabele and Mashona rebellion in 1896, and the fact that in that year all ox traffic from the Cape to the north was dislocated by rinderpest, the construction was pushed on with great rapidity by the contractors, the line reaching Bulawayo on the 19th October, 1897.

2. **Railway through Tati District.**—In 1910, as the result of negotiations extending over some years, the Tati Concessions, Limited (now the Tati Company, Limited) and the Bechuanaland Railway Company (now Rhodesia Railways, Limited) entered into an agreement (see Schedule 3 to the Bechuanaland Protectorate Proclamation No. 2 of 1911) whereby the former conveyed to the latter, in addition to certain land at Francistown and subject to certain conditions, a strip of land—along the line of railway they constructed—of a uniform width of one hundred yards throughout the Tati District (now merged into the Francistown District).

3. **Length of Railway.**—The length of the railway line running through the Bechuanaland Protectorate is 403 miles, including about 70 miles through the Francistown District. The line enters the Protectorate at Ramathlabama Spruit, sixteen miles north of Mafeking and 886 miles north of Cape Town, and leaves it at mileage 1,289 (about half-way between Ramaquabane Siding and Plumtree).

The Rhodesia Railways, Limited, have constructed several dams in connection with the working of the line, viz. :—

	Capacity in Gallons.
Lobatsi	15,000,000
Metsimaswaana (Notwane Siding)	45,000,000
Mileage 1197	5,000,000
Palapye	15,000,000
Tsessebe (Inchwe River)	12,000,000
Pilane	9,000,000

There is no other line of railway in the Bechuanaland Protectorate.

4. **Roads.**—The roads from railway stations and sidings to the principal villages serve for motor transport, but about fifty miles west of the railway line ox-transport becomes an absolute necessity.

§ 16. Posts, Telegraphs, and Telephones.

1. **Postal System.**—The administration and control of the postal department in the Protectorate is, subject to the authority of the Resident Commissioner, vested in the Postmaster-General of the Union of South Africa.

From June, 1891, to August, 1916, the Post Office Acts of the Colony of the Cape of Good Hope passed prior to June, 1891, were, *mutatis mutandis*, in force within the Bechuanaland Protectorate, as also certain other Post Office Acts promulgated subsequent to June, 1891, and made applicable to the territory by Proclamation. All these Acts were repealed by Act No. 10 of 1911 (*The Post Office Administration and Shipping Combinations Discouragement Act*, 1911) of the Union of South Africa, but still remained in force in the Protectorate until 18th August, 1916, when, by Proclamation No. 28 of 1916, the said Act No. 10 of 1911 was, with certain exceptions, *mutatis mutandis*, applied to the Protectorate.

2. **Telegraphs and Telephones.**—The telegraph and telephone lines erected in the Protectorate, connecting the Union of South Africa with Rhodesia, are owned and worked by the Rhodesian Administration. They run parallel to the railway line. The only telegraph and telephone branch is from Palapye Road to Serowe, a distance of approximately 35 miles. In addition there is a line of telephone from Lobatsi Railway Station to " Woodlands " (the British South Africa Company's experiment farm), a distance of about seven miles, and one from Palapye Road to Macloutsie.

The rate for telegrams exchanged between the Bechuanaland Protectorate and other parts of South Africa is 2d. per word ; to Northern Rhodesia, 3d. per word.

The *Electric Telegraph Acts* of the Cape of Good Hope, Nos. 20 of 1861, 5 of 1682, 4 of 1877, and 41 of 1882, are still in force in the Bechuanaland Protectorate *mutatis mutandis*.

No person may establish or use any apparatus or installation for the transmission of messages or other communications by means of electrical energy without the aid of wires, without having previously obtained a licence for these purposes.

Power to establish a censorship of postal and telegraphic matter is provided by Proclamation No. 60 of 1914.

3. **Post Offices and Postal Revenue.**—There are twenty-one Post Offices and Postal Agencies in the Protectorate, namely:—

Francistown, Lobatsi, Serowe	Money Order, Savings Bank, Post and Telegraph Offices.
Gaberones Railway Station, Mahalapye Railway Station, Mochudi Railway Station, Palapye Road Railway Station	Postal Order and Telegraph Agencies.
Gaberones Village, Mochudi Village, Kanye, Molepolole, Palla Road, Ramoutsa, Tsessebe, Pitsani, Kasane, Maun, Ghanzi, Makgobi's Stad, Shashi, Ramaquabane	Postal Order Agencies.

During the year 1924–25 the issues of postal and money orders totalled 10,341, with a value of £4,148, as against 10,639, valued at £6,630, during 1923–24.

In 1924–25, 2,548 orders were paid out to the value of £1,535, as against 2,730, valued at £2,507, in 1923–24.

The rate of postage on letters posted within the territory for delivery therein or for delivery in the Union of South Africa, Southern and Northern Rhodesia, and the Province of Moçambique, is 2d. for each ounce or fraction thereof.

§ 17. Finance.

1. **Revenue and Expenditure.**—There is no Public Debt in the Bechuanaland Protectorate. Until and including the financial year 1914–15 (1st April to 31st March) the excess of expenditure over revenue was met by an Imperial grant-in-aid; and since 1915–16 the revenue of the territory has generally exceeded the expenditure. Assets exceeded liabilities on the 31st March, 1925, by £39,025.

The revenue receipts under the various heads are given below for six financial years.

REVENUE.—BECHUANALAND PROTECTORATE, 1919–20 TO 1924–25.

Description.	1919–20.	1920–21.	1921–22.	1922–23.	1923–24.	1924–25.

* Allowances to Chiefs, etc.

2. **Hut Tax.**—The hut tax is £1 per annum, and is payable in respect of every hut occupied as a dwelling-place by a native or natives; and, if a hut is occupied by two or more male natives of full age, the sum of £1 is payable by each of them. The collection of this tax in the Native Reserves is made by the chiefs, who have been appointed collectors in their respective reserves, and receive a remuneration not exceeding 10 per cent. of the value of the tax collected by them. Outside of the Native Reserves the tax is collected by officers appointed for that purpose by the Resident Commissioner. An additional tax of 3s. per hut was levied as from 1st April, 1920, to be credited to a native fund created for the purpose of carrying out general improvements in the Native Reserves. From the 1st April, 1923, this tax was increased to 5s. per hut, except in the Bamangwato and Batawana Reserves, where it is only 3s. per hut.

3. **Stamp and Licence Duties and Fees.**—By Proclamation No. 14 of 1897, dated 30th September, 1897, as amended by Proclamation No. 23 of 1914, the undermentioned Acts of the Cape Colony, with regard to stamp and licence duties, were specially declared in force in the Protectorate, with certain modifications, in so far as they were at that date in force within the said Colony, and in so far as not inconsistent with or repugnant to any laws in force in the territory, namely :—

Act No. 3 of 1864.	Act No. 20 of 1884.
Act No. 13 of 1870.	Act No. 13 of 1886.
Act No. 15 of 1877.	Act No. 38 of 1887.

The following tariffs of fees have been applied to the Protectorate by Proclamation :—

In the Office of the Master of the Resident Commissioner's Court, see Schedule to Proclamation No. 3 of 1895.

In the Court of the Resident Commissioner and in Courts of Assistant Commissioner and Resident Magistrate, see High Commissioner's Notice No. 15 of 1896.

The following fees are also payable :—	£	s.	d.
For registration of a brand	0	10	0
For registration of a co-operative society	1	0	0
For registration of a marriage	0	2	6
For copy of a Marriage Certificate	0	2	6
For registration of a patent—			
On filing application for registration of patent	0	10	0
On registration of patent	1	0	0
Renewal fees—			
Before the expiration of third year of patent	2	0	0
Before the expiration of seventh year of patent	3	0	0
Before the expiration of tenth year of patent	5	0	0
(NOTE.—Any or all of the payments for renewals may be made in one sum.)			
On registration of any assignment, amendment, extension or licence	0	10	0

	£	s.	d.
For registration of a trade mark—			
On filing application for registration of trade mark	0	10	0
On registration of trade mark	1	0	0
Renewal fees—			
As and when and as often as renewal of registration is necessary in the Union of South Africa	1	0	0
On registration of any assignment, amendment, addition, or alteration	0	10	0
For a passport	1	0	0
For renewal of a passport, for each year renewed	0	1	0
For endorsement of a passport (except for British Empire journeys)	0	2	0

The following is the scale of licences in operation in the Protectorate. These licences are issued for calendar years, unless otherwise stated.

BECHUANALAND PROTECTORATE LICENCES.

Description of Licence (Annual).	Whole Year. £ s. d.	Half-Year. £ s. d.	Remarks.
Agent of a Foreign Firm	10 0 0	5 0 0	—
Apothecary, Chemist, and Druggist	5 0 0	2 10 0	—
Assurance Company, Society, or Association (Fire, Accident, or Life)	—	—	£5 first year, 3d. per £1 of premium received in the territory for second and subsequent years; minimum, £5; maximum, £50.
Auctioneer	10 0 0	5 0 0	—
Baker	5 0 0	2 10 0	—
Bank	—	—	For every £100 of its paid-up capital, ½d.
Broker	5 0 0	2 10 0	—
Butcher	5 0 0	2 10 0	—
Cigarettes (manufactured or for sale)	1 0 0	—	1st April in one year to 31st March in the next.
Commercial Traveller	5 0 0	—	—
Dealer in Aerated Waters, Cigars, and Tobacco	1 10 0	0 15 0	—
Game (to carry and use a gun)	1 0 0	—	—
Game (to sell or export for sale)	2 0 0	1 0 0	—
Gunpowder	5 0 0	2 10 0	—
Importer	12 0 0	6 0 0	—
Labour Agent	25 0 0	12 10 0	See § 8 above.
Joint Stock Company	—	—	1s. on every £100 of the subscribed capital.
Ostrich Feather Buyer	5 0 0	2 10 0	—
Pawnbroker	10 0 0	5 0 0	—
Railway Administration or Company (Refreshment Cars)	60 0 0	—	—
Trader (from fixed stand)	Minimum, 15 0 0 Maximum, 50 0 0	Minimum, 7 10 0 Maximum, 25 0 0	On aggregate amount of sales during preceding year. As to trading in Native Reserves, see first paragraph of § 11.
Stock Buyer—			
Including purchase for export	25 0 0	12 10 0	See § 12.
Excluding purchase for export	20 0 0	10 0 0	
Wine and Spirits :—			
Wholesale	30 0 0	15 0 0	—
Retail	30 0 0	15 0 0	—
Midnight Privilege	5 0 0	2 10 0	—
Temporary	—	—	10s. per diem.

Other Licences.	£	s.	d.
Game (to hunt "large game"):—			
Full season (1st March to 31st August), or any period exceeding three calendar months	20	0	0
For three calendar months or for any period exceeding two calendar months	12	0	0
For two calendar months or any period exceeding one calendar month....	8	0	0
For one calendar month or any period exceeding 14 days.....	4	0	0
For fourteen days or any shorter period.....	2	0	0

These licences are only issued to persons who wish to shoot for sport or to obtain specimens of the various species; and are not granted to those who are likely to abuse them or to shoot for the profit to be made out of the meat, skins, or horns. The number of head allowed to be shot under any licence is strictly limited, and is, under ordinary conditions, confined to one or two specimens of each variety. No licences are issued to shoot or capture hen ostriches, and the removal or being in possession of the eggs of these birds is not permitted. Persons applying for licences to shoot large game must satisfy the Resident Commissioner that they are fit and proper persons to hold them.

	£	s.	d.
Hawker—For three months or any lesser period for each vehicle.....	5	0	0
Marriage, Special.....	5	0	0
Wireless Telegraphy.....	100	0	0
Certificate of Admission to Practice—			
As an Advocate.....	20	0	0
As an Attorney.....	20	0	0
As a Notary Public.....	12	10	0
As a Conveyancer.....	12	10	0
As a Medical Practitioner.....	5	0	0
As an Apothecary, Chemist, and Druggist.....	2	10	0
As a Dentist.....	2	10	0
Motor Vehicles—			
For every motor-cycle without side-car.....	0	10	0
For every side-car or similar attachment.....	0	5	0
For every motor-car not exceeding 1,500 lb. in weight.....	1	10	0
For every motor-car exceeding 1,500 lb. in weight and not exceeding 2,500 lb.....	2	0	0
For every motor-car exceeding 2,500 lb. in weight and not exceeding 4,000 lb.....	3	0	0
For every motor-car exceeding 4,000 lb. in weight and not exceeding 6,000 lb.....	5	0	0
For every motor-car exceeding 6,000 lb. in weight.....	10	0	0

The above are reduced by one-quarter if paid between 1st April and 30th June, by one-half if paid between 1st July and 30th September, and by three-quarters if paid between 1st October and 31st December.

	£	s.	d.
Transfer of motor-car licence.....	0	5	0
Transfer of motor-cycle licence.....	0	2	6
Duplicate of registration certificate or of motor-vehicle licence.....	0	2	6
Drivers' licence—			
Motor-car.....	0	10	0
Motor-cycle.....	0	5	0
Temporary learner's licence (available for 30 days)—			
Motor-car.....	0	2	0
Motor-cycle.....	0	1	0

NOTE.—The owner of any motor vehicle who holds an unexpired licence or licences entitling him to drive such vehicle within any Province of the Union or any part of Southern or Northern Rhodesia or Swaziland may drive such vehicle (otherwise than for hire) in the Bechuanaland Protectorate for a continuous period not exceeding two months, without registering the same or obtaining a motor vehicle or driver's licence in the Bechuanaland Protectorate, but he must submit such licence or licences to the first Resident Magistrate of the Bechuanaland Protectorate on his route for endorsement.

4. **Banking.**—There are no commercial banks in the Protectorate.

CHAPTER III.

SWAZILAND.

§ 1. History.*

The Swazis are akin to the Zulu and other tribes of the south-eastern littoral. Up to about 100 years ago they occupied the country just north of the Pongolo River, but a hostile chief in their vicinity forced them farther north, and, under their Chief Sobhuza, they then occupied the territory now known as Swaziland. This Chief, who died in 1839, was succeeded by Mswazi II. The further order of succession has been: Ludonga, Mbandini, and Bhunu, whose son, Sobhuza II., was installed as Paramount Chief in 1921, after a long minority, during which his grandmother, Labotsibeni, acted as Regent.

The many concessions granted by Mbandini necessitated some form of European control, notwithstanding that the independence of the Swazis had been guaranteed in the Conventions of 1881 and 1884, entered into between the Government of Her late Majesty, Queen Victoria, and the Government of the late South African Republic. In 1890, soon after the death of Mbandini, a Provisional Government was established representative of the Swazis, the British, and South African Republican Governments. In 1894, under Convention between the two European Governments, the South African Republic was given powers of protection and administration, without incorporation, and Swaziland continued to be governed under this form of control until the outbreak of the Boer War in 1899.

In 1902, after the conclusion of hostilities in the Transvaal, a Special Commissioner took charge, and, under an Order-in-Council in 1903, the Governor of the Transvaal administered the territory, through the Special Commissioner, until the year 1907, when, under an Order-in-Council (1906), the High Commissioner assumed control and established the present form of administration. Previously to this, steps had been taken for the settlement of the concessions question by the definition of the boundaries of the land concessions and their partition between the concessionaires and the natives. The boundaries of the mineral concessions were also defined, and all monopoly concessions were expropriated.

Title to property is therefore now clear.

In 1912, a Special Court was established with an Advocate of the Provincial Division of the Transvaal as President. The other members of the Court consist of the Resident Commissioner, the Deputy Resident Commissioner, and the Assistant Commissioners of the various districts. The Court holds sessions twice a year. All cases are dealt with by three members sitting without a jury The Court has jurisdiction in civil and criminal cases.

An elected Advisory Council, representative of the Europeans, was established in 1921, to advise the Administration on purely European affairs.

§ 2. Boundaries, Area, and Physical Characteristics.

1. **Boundaries and Area.**—Swaziland is bounded on the north, west, and south by the Transvaal Province, and on the east by Portuguese territory and Zululand. The area of Swaziland is 6,678 square miles.

2. **Physical Characteristics, Climate, Etc.**—The Territory is divided geographically into three longitudinal regions of roughly equal breadth, running from north to south, and known locally as the *high, middle,* and *low* or *bush veld.* The mountainous region on the west rises to an altitude of over 4,000 feet. The *middle veld* is about 2,000 feet lower, while the *low veld,* bounded on the east by the Lebombo Mountains, has an average height of not more than 1,000 feet.

The mountainous region, or *high veld,* is free from malaria, which is present in the *low veld,* and in a slight degree in the *middle veld* during some of the summer months. The first two regions are remarkably well watered. Innumerable small streams unite with the large rivers which traverse the country from west to east. Except for these the *low veld* is not very well watered. The climate is ideal except for a few months in summer when the heat is somewhat excessive in parts. The *high veld* portion, however, seldom experiences any excessive heat, a spell of hot weather being almost invariably followed by cooling mists.

* A full history will be found in previous issues of this *Year Book* (Nos. 3 to 6).

3. **Meteorology.**—Both the rainfall and the temperature vary considerably with the altitude of the stations. The average rainfall to the end of 1924 at three stations was :—

Mbabane (3,800 feet)..... 52·11 inches over 21 years.
Bremersdorp (1,500 feet)..... 34·64 „ „ 22 „
Natalia Ranch (800 feet)..... 25·36 „ „ 10 „

The following return shows the temperature recorded at Mbabane (*high veld*) and Natalia Ranch (*low veld*). The figures given in regard to Mbabane may be taken as typical of the hilly parts of the country, while those at Natalia Ranch are typical of the *low veld* generally. The *middle veld* varies as to rainfall and temperature between the two stations referred to.

RECORDED TEMPERATURE, MBABANE AND NATALIA RANCH.

Year.	Mbabane.			Natalia Ranch.		
	Mean Max.	Mean Min.	Mean Temp.	Mean Max.	Mean Min.	Mean Temp.
	°	°	°	°	°	°
1920.....	73·6	51·8	62·7	83·3	58·9	71·1
1921.....	72·4	51·6	62·0	83·3	59·8	71·5
1922.....	73·6	51·8	62·7	83·9	59·8	71·8
1923.....	74·6	52·0	63·3	85·4	59·0	72·2
1924.....	71·5	50·8	61·1	82·1	59·2	70·6

§ 3. Administration.

1. **Central Administration.**—By an Order-in-Council, dated the 1st December, 1906, Swaziland was placed directly under the control of the High Commissioner for South Africa, and a Proclamation was issued in March, 1907, providing for the appointment of a Resident Commissioner, a Government Secretary, Assistant Commissioners, and the establishment of a Police Force. In 1921 the establishment was approved of an Advisory Council to advise the Administration in purely European matters. A Council of nine members was elected, five for the southern portion of Swaziland, and four for the northern portion. A second Council was re-elected in 1923.

The headquarters of the Administration are at Mbabane, a small village, picturesquely situated on the hills, at an altitude of 4,000 feet, and overlooking the *middle veld*. It is reached by good roads from Ermelo, Breyten, and Carolina in the Transvaal, the latter town being distant about ninety miles. The journey by mail-car from Carolina takes about six hours. Mbabane can also be reached from the Portuguese railhead at Goba, by road through Bremersdorp, the former capital. The journey by motor-car, over a fair road, usually takes between eight and nine hours.

2. **Principal Officers of Administration.**—

Headquarters, Mbabane.

Resident Commissioner: de S. M. G. Honey, C.M.G.
Deputy Resident Commissioner and Government Secretary: B. Nicholson, C.B.E., D.S.O., M.C.
Financial Secretary: L. G. Luscombe.
Chief Clerk: L. J. Puttick.
Master, Registrar, Sheriff: W. W. Usher.

Hlatikulu District.

Assistant Commissioner, Hlatikulu: A. G. Marwick, O.B.E.
Deputy Assistant Commissioner: H. B. A. McCarter.

Mbabane District.

Assistant Commissioner, Mbabane: B. H. Warner, B.A.
Deputy Assistant Commissioner: W. W. Usher.
Resident Justice of the Peace, Bremersdorp: S. B. Williams.
Deputy Assistant Commissioner (Acting), stationed at the Peak: Sub-Inspector T. W. Vine, D.C.M.

Ubombo District.

Assistant Commissioner, Ubombo: T. A. F. Steward.

Mankaiana District.

Assistant Commissioner: D. H. Harvey.

Police.

Staff Officer for Police: Major G. D. Roberts.

Medical.

Principal Medical Officer: R. Jamison, F.R.C.S.

Veterinary.

Principal Veterinary Officer: W. A. Elder, O.B.E., F.R.C.V.S.

3. **Local Administration.**—A Proclamation was issued in 1912, constituting the township of Mbabane and empowering the High Commissioner to make general regulations for the government of townships. There is no council or village board. The streets are kept in repair by the Government and no rates are charged. The sanitary organization of Mbabane is under Government supervision and householders pay a nominal amount per month for this service. Mbabane is provided with electric light and an ample supply of water by the private companies which purchased the mineral concessions of the Swaziland Tins Co., Limited, on the liquidation of the latter in 1922.

§ 4. Population and Vital Statistics.

1. **Population.**—The following table gives the population of Swaziland in 1911 and 1921 :—

POPULATION OF SWAZILAND, 1911 AND 1921.

Race.	1911.			1921.		
	Male.	Female.	Total.	Male.	Female.	Total.
European.....	623	460	1,083	1,239	966	2,205
Bantu.....	44,098	54,635	98,733	52,761	57,534	110,295
Asiatic.....	84	59	143	7	—	7
Other Coloured...				254	190	444
TOTAL.....	44,805	55,154	99,959	54,261	58,690	112,951

A small percentage of the natives in southern Swaziland consists of Zulus. There are four European villages in Swaziland—Mbabane with a European population of 260, Bremersdorp with a European population of 120, and two villages, of about 200 erven each, which have been established in the Hlatikulu District, at Hlatikulu and Goedgegun. Other European centres are the Government stations at Mankaiana, Stegi, and Pigg's Peak.

2. **Vital Statistics.**—(i) *Registration of Births, Deaths, and Marriages.*—The registration of births and deaths and the solemnization of European and native marriages are regulated respectively by the following Transvaal Laws, viz., Proclamation No. 27 of 1900, Law No. 3 of 1871, and Law No. 3 of 1897, which are in force in Swaziland, by virtue of the *Swaziland Administration Proclamations* of 1904 and 1907. The general requirements under these laws are the same as in the Transvaal. The registration of native births, deaths, and marriages (other than marriages under European law) is not yet enforced.

(ii) *Births, Deaths, and Marriages Registered.*—The total number of births, deaths, and marriages, European and coloured, registered during a period of years is shown in the following table :—

BIRTHS, DEATHS, AND MARRIAGES REGISTERED IN SWAZILAND.

YEAR.	BIRTHS.	DEATHS.	MARRIAGES.	
			European.	Coloured.
1915.....	42	12	6	45
1916.....	42	18	5	45
1917.....	49	18	7	41
1918.....	34	22	9	15
1919.....	50	25	10	65
1920.....	49	23	12	62
1921.....	43	21	10	66
1922.....	61	15	17	62
1923.....	53	27	13	53
1924.....	55	21	12	79

3. **Health.**—Swaziland varies in altitude from about 4,000 feet on its western border to about 400 feet near the eastern border, and consequently all kinds of climate are represented, from that of the Transvaal *high veld* to almost tropical *low veld*. While the former is one of the healthiest portions of South Africa, in the *low veld* on the eastern side there is a good deal of malaria in the hot season, and some dysentery. Both, however, are easily avoided by taking the precautions ordinarily considered necessary in any sub-tropical country, and quite a number of white men lead healthy lives in the very middle of the *low veld*. The natives, on the whole, are of good physique and suffer little from epidemic diseases. The medical service consists of three doctors and two hospital assistants.

§ 5. Educational Organization and Social Conditions.

1. **Government-aided Education.**—Government schools of an elementary type are established at various centres in the country. There is also a Government school for natives at Zombode, the kraal of the paramount chief. A primary and secondary school has been established at Mbabane by the Venerable Archdeacon C. C. Watts, M.A. This school receives a Government grant and charges no tuition fees. It is attended by boarding and day scholars of both sexes. Several of the pupils have passed the matriculation examination. In the year 1924 there were 71 scholars on the roll. Archdeacon Watts also established a school for coloured children near Mbabane. This receives a Government grant, which is also paid to another school for coloured children, which has been established at the Florence Mission in the Hlatikulu district. In addition to the above, the various missions conduct schools and classes in connection with their mission work for natives. These also receive Government grants. Boarding bursaries at the rate of 4s. per child per week are paid by the Government for all white pupils whose parents are in poor circumstances and who reside three miles or more from school. There are very few white children who are not receiving education.

At present there are 14 schools for white children in the Territory. The average attendance during the year 1924 was 329, as compared with 246 in 1923.

The average attendance at the Polonjeni coloured school was 60 and at the Government school for natives at Zombode 92.

There are 2,532 native pupils at the various mission schools. A number of the more advanced pupils, both boys and girls, are sent out every year to be trained in the Union—at Lovedale, Tiger Kloof, and other Institutes. The paramount chief was educated at Zombode and Lovedale. The cost of tuition and board for these pupils is paid from the *Swazi National Fund*, which was created with the concurrence of the Swazi chiefs, for purposes of direct benefit to the natives. Each native taxpayer is required by law to pay 2s. per annum to the fund, the expenditure from which is under the control of the Government.

2. **Churches and Missionary Activities.**—There are sixteen religious bodies carrying on work in Swaziland, as follows:—

Church of England.	International Holiness Union.
Wesleyan Methodist.	Evangelic Lutheran.
Dutch Reformed Church.	African Methodist Episcopalian.
S.A. Reformed Church.	Independent Methodist.
Gereformeerde Church.	Full Gospel Mission of Norway.
South African General Mission.	Christian Catholic Apostolic Church of Zion.
Roman Catholic.	Scandinavian Alliance Mission.
Church of the Nazarene.	Swedish Mission.

As far as possible, the native missions avoid encroaching on each other's spheres of work. Religious instruction is given by the different bodies at about 186 different centres, where the average attendance during 1924 was 9,743, as compared with 8,273 in 1923. The Church of England and the Roman Catholic Church also have churches at Mbabane for Europeans and a church has been built at Bremersdorp.

Mission work was begun amongst the natives many years ago by the Reverend Joseph Allison, an enthusiastic Wesleyan pioneer missionary. He started work at Mahamba with the permission of the Swazi authorities. There the Swazi king, Mswazi, visited him, and for the first time saw a white man.

Some years later missionaries of the Church of England erected the first permanent mission station in Swaziland, at the Usutu.

The South African General Mission followed and the Wesleyans reopened their work in the Territory.

When the country was taken over by the Crown, after the South African war, and law and order became more established, the missions had a better opportunity. The Wesleyans developed their work very largely with good schools; the Church of England

also extended from the Usutu to various outstations, while the South African General Mission enlarged its sphere of work. In addition to these, the Scandinavian Alliance Mission, and later on the Roman Catholic Church, established missions in various parts of the Territory.

Apart from the regular schools, the natives are being educated in a variety of ways. They acquire something of the superficial culture of the Europeans from every white man with whom they come in contact. They are, however, notoriously difficult from a missionary point of view. They do not take kindly to Christianity, not because they are irreligious, but because they find the restrictions somewhat irksome. They are eager for all the advantages and privileges religion has to offer them, but they do not like the responsibilities.

3. **Labour.**—There is a fair local demand for native agricultural and mine labourers, and about 600 natives are employed on the tin mining companies working in Swaziland. The country has not, however, advanced sufficiently to absorb all the native labour available, and consequently the Swazis go out freely to work on the Transvaal mines, where the demand for their labour increases every year. There are about 7,000 Swazis in constant employment on the mines. The recruiting of labour is under the control of the Native Recruiting Corporation, which has agents in the various districts. Many of the natives, however, go out to seek work of their own accord.

§ 6. Administration of Justice.

1. **Superior Courts.**—By the *Swaziland Administration Proclamation*, 1907, a Court of Resident Commissioner with all the powers of a Superior Court, was established. The laws of the Transvaal then in force in Swaziland were re-enacted, *mutatis mutandis*, and the Roman-Dutch Common Law was declared to be in force. In 1912 this Proclamation was amended and a Special Court was substituted for the Resident Commissioner's Court, with an advocate of the Provincial Division of the Transvaal as president. The other members of this Court consist of the Resident Commissioner, the Deputy Resident Commissioner, and the Assistant Commissioners of the various districts. The Court holds sessions at least twice a year. All cases which come before it are dealt with by three members, sitting without a jury. This Court has jurisdiction in all civil and criminal cases arising, or which shall have arisen in Swaziland, including the right of reviewing the proceedings of and hearing appeals from any inferior court of justice in Swaziland. When the Court is not in session, the Resident Commissioner or Deputy Resident Commissioner as a member of the Special Court is competent—

(*a*) to review the criminal proceedings of the Courts of Assistant Commissioner when the sentence exceeds three months' imprisonment, or a fine of £25, or any sentence of whipping, and to hear appeals in all civil and criminal cases against any judgment, sentence, or final order of Courts of Assistant Commissioner;

(*b*) to exercise the civil jurisdiction of the Special Court in all motions and applications and in all actions for provisional sentence, and in all cases in which all parties apply to have the case tried before the Resident Commissioner. In any case, other than a review of criminal proceedings, there is a right of appeal to the full Court.

Death sentences can only be carried out upon the special warrant of the High Commissioner. There is a right of appeal to the Privy Council against any final judgment of the Special Court, where the matter in dispute is of the value of £500 or upwards.

2. **Lower Courts.**—Under the *Swaziland Administration Proclamation*, 1907, the High Commissioner appointed Courts of Assistant Commissioner with jurisdiction in all civil proceedings in which neither party is a white person, and in criminal proceedings in which the accused is not a white person. These Courts have no jurisdiction to try summarily any persons charged with treason, murder, attempt to murder, culpable homicide, rape, attempt to commit rape, or sedition; and in these cases and in other serious cases, preparatory examinations are taken under the *Criminal Procedure Code*, 1903, of the Transvaal, which is in force in Swaziland. The jurisdiction of Courts of Assistant Commssioner as regards white persons, in both civil and criminal matters, is the same as was conferred on courts of magistrates in the Transvaal at that time.

There is one Court of Resident Justice of the Peace, established at Bremersdorp.

3. **Native Courts.**—Under the above-mentioned Proclamation, the paramount chief and other native chiefs of Swaziland are authorized to continue to exercise jurisdiction according to native law and custom in all civil disputes in which natives only are concerned. An appeal lies from the decision of any such chief to the Resident Commissioner, whose decision is final.

4. **Police.**—A Police Force, known as the Swaziland Police, has been established under the command of a Staff Officer The present strength of the Force is :—European : 2 officers, 1 warrant officer, 19 non-commissioned officers and men ; Native : 1 native officer, and 136 non-commissioned officers and men.

5. **Criminal Statistics.**—During the year 1924 the number of cases reported to the police was 2,889. Of this number 79 were not brought before the Courts for want of evidence. In all, 2,810 persons were brought before the various Courts. Of this number, 268 were discharged, 55 committed for trial in the Superior Courts, and the rest summarily convicted.

The following tables show the number of convictions and acquittals during a series of years :—

SUMMARY CONVICTIONS FOR CRIMINAL OFFENCES IN SWAZILAND, 1919 TO 1924.

Description.	1919.	1920.	1921.	1922.	1923.	1924.
Offences against the person..	131	257	127	192	216	354
Offences against property....	245	189	232	243	246	355
Tax and Pass Laws.....	1,219	1,176	1,568	1,704	1,825	1,822
Other offences.....	444	245	483	414	538	294
Number of persons acquitted..	254	144	280	244	297	268

CONVICTIONS IN THE SUPERIOR COURTS OF SWAZILAND, 1919 TO 1924.

Description.	1919.	1920.	1921.	1922.	1923.	1924.
Homicides.....	74	14	13	23	10	11
Other offences against the person	4	48	4	5	6	7
Offences against property.....	3	12	2	16	9	10
Other offences.....	1	1	—	—	1	1
Number of persons acquitted..	69	26	17	8	9	15

§ 7. Organization for Defence or War.

General.—In addition to the police force constituted as stated previously, in each of the four districts of Swaziland there is a rifle club, every member of which holds a Government rifle and 100 rounds of ammunition. An undertaking is signed by the members : " in case of emergency to respond in person . . . to any call in defence of life or property in Swaziland, or the preservation of order therein when called upon by the Resident Commissioner, or his lawful deputy." There are about 350 members belonging to these rifle clubs and most of them could be mobilized as a mounted force.

§ 8. Land Settlement.

1. **Present Position.**—The grant of land, mineral, grazing, and other concessions has been dealt with in § 1 of this chapter. The present owners of land derive their titles from the original concessions granted by the Swazi kings, and provision exists whereby these titles, if granted in respect of periods of ninety-nine years or over, may be converted into freehold grants. These were inquired into by the Chief Court of Swaziland in 1890, and most of the concessions were confirmed. These concessions were duly registered in the books of the Swazi nation, by their agent and adviser, the late Mr. T. Shepstone, C.M.G., and registration has been continued in the Swaziland Deeds Office, which is under the charge of the Registrar of Deeds for the Transvaal.

Land survey, tenure, and occupation and registration of land are based on the same principles as those in the Transvaal. The Surveyor-General of the Transvaal acts in a similar capacity for Swaziland.

The following tables give particulars of deeds registrations in Swaziland during a period of years :—

DEEDS REGISTERED IN SWAZILAND, 1921 TO 1924.

Description.	1921.	1922.	1923.	1924.
(a) NUMBER.				
Deeds of Transfer	39	63	55	73
Deeds of Grant	28	54	52	52
Bonds passed	53	73	47	59
Bonds cancelled and part payments	19	20	28	32
Cessions of Bond and Releases	9	4	11	15
Cessions of Concession Title	43	44	74	49
Antenuptial Contracts	6	4	2	12
Leases	—	1	1	4
Powers of Attorney	2	3	1	8
Substitutions, section 22, Proclamation No. 100 of 1922	—	—	—	2
(b) VALUE.				
	£	£	£	£
Deeds of Transfer	26,754	34,583	16,317	33,098
Deeds of Grant	1,277	3,563	5,350	4,540
Bonds passed	43,988	44,357	92,973*	55,529
Bonds cancelled and part payments	20,647	18,172	19,206	29,613
Cessions of Bonds and Releases	7,307	1,725	2,774	12,119
Cessions of Concession Title	45,845	31,236	19,577	54,885
Substitutions, section 22, Proclamation No. 100 of 1922	—	—	—	2,600

* Includes a collateral notarial bond of £20,000.

The area of Crown land (both unencumbered and encumbered) which has so far been alienated amounts to 438,400 morgen; while there are 60,000 morgen (unencumbered) and 27,500 morgen (encumbered) of Crown land not yet alienated.

2. **Possibilities for Land Settlement Purposes.**—At the time of the settlement of the concessions, many of the Dutch and other settlers in the country were in poor circumstances, and the Government allotted to many of them, on easy terms, suitable plots of land, varying from 420 to 1,050 acres in extent. The results generally have been excellent. During the years 1922 and 1923, about 110 plots in the *low veld*, each of 500 morgen, were sold on easy terms to returned soldiers domiciled in Swaziland.

§ 9. Agriculture, Game, and Fish.

1. **Live Stock and Pastoral Production.**—(i) *Horses and Mules.*—Owing to the prevalence of horse-sickness, Swaziland is not a horse or mule breeding country, but both classes of animal are used extensively.

(ii) *Asses.*—A small number of asses are bred in the Territory.

(iii) *Cattle.*—It is reported by old residents that in the very early days, before the invasion of rinderpest in 1894, the country teemed with cattle, and a rough estimate of the number is given at 300,000 head. Rinderpest in 1894 and 1897 and East Coast fever in 1902, made great ravages. At the 1911 Census the number of cattle was 57,601.

Since 1911, the campaign against East Coast fever has been most successful and cattle have increased very rapidly. The number in 1924 was approximately 250,000. Dipping is compulsory everywhere, and the Europeans and natives have alike realized its value.

Swaziland, especially the *bushveld*, is one of the finest of cattle-raising centres. In 1913 cattle ranches were established in the *bushveld*, and one of these, the largest, is now running approximately 13,000 head of mixed breeding stock. Pure-bred bulls of the Friesland, Shorthorn, Hereford, Aberdeen-Angus, and Devon breeds have been introduced; but, as yet, it is not possible to state definitely which breed is the best to cross with the local cattle, which are themselves of a fairly good type for the purpose, and give a high annual percentage of calves.

From 1902 to 1916, the Union of South Africa prohibited the export of cattle from Swaziland into the Union. This prohibition still exists, except in respect of cattle for slaughter purposes.

During the year 1924, 4,976 head were exported for slaughter purposes.

NUMBER OF CATTLE, HORSES, MULES, ASSES, AND PIGS, 1904, 1911, AND 1921–24.

Year.	Cattle.	Horses.	Asses.	Mules.	Pigs.
1904 (Census)	37,432	505	517	236	4,343
1911 (Census)	57,601	541	1,538	329	8,994
1921 (Census)	210,291	1,449	4,274	284	1,181*
1922 (estimated)	225,000	1,110	3,050	250	9,000
1923 (estimated)	230,000	1,064	3,021	321	9,500
1924 (estimated)	250,000	1,010	3,274	316	10,000

* Pigs belonging to natives were enumerated in urban areas only.

(iv) *Sheep and Wool.*—Approximately 300,000 sheep come into Swaziland from the Union annually, for the purpose of winter grazing. The general farming of woolled sheep the year round has not been generally tried, but a few flocks kept on the hills have done well. No wool is exported.

(v) *Goats and Mohair.*—The goats in Swaziland are of the common South African goat breed. There are no Angora goats in the country.

The Census returns of native sheep and goats are as follows:—

1904	87,085	1922 (estimated)	160,900
1911	163,593	1923 (estimated)	200,000
1921	118,790	1924 (estimated)	248,000

(vi) *Poultry.*—At the 1904 Census the number of all kinds of poultry was returned at 3,484; while at the 1911 Census the number had increased to 10,179.

2. **Agricultural Production.**—(i) *Cultivation of Cereals.*—The summer rains begin in September and continue until March or April. The principal crop raised in the country is maize, grown in all parts. Great care is being exercised by Europeans in the selection of their seed. The chief breeds grown are: Hickory King, Mercer, Chester County, Iowa Silver Mine, Natal Horsetooth.

Kaffir corn is extensively grown by the natives, and wheat, oats, rye, and barley to a limited extent by European farmers with facilities for irrigation.

The agricultural census of 1921 showed the following production of cereals in Swaziland:—Maize, 29,025 bags; kaffir corn, 1,136 bags; wheat, 110 bags; oats (forage), 58,100 lb.

(ii) *Fruit Cultivation and Sugar Production.*—All classes of fruit grow well. Citrus fruits, apples, pears, peaches, apricots, plums, strawberries grow on the high parts; citrus and all sub-tropical and tropical fruits in the middle and low parts. The Government Horticulturist of the Transvaal has reported very favourably on the prospects of fruit-growing, and he was especially impressed with the suitability of the climate and soil for citrus fruits and mangoes. All fruit at present produced is consumed in the Territory, but many citrus plantations are being started. Pending the construction of a railway, production will be limited for want of a market.

The growing of sugar-cane is only in the experimental stage.

(iii) *Cotton.*—The cotton industry is progressing favourably, and during the year 1924 approximately 8,000 acres were put under cultivation. Experiments with many varieties have been carried out, and Watt's Long Staple, Zululand Hybrid, Improved Bancroft, and Griffin appear to give the best results.

Swaziland is believed to be essentially a cotton-producing country of the future. The rainfall, averaging from 30 to 40 inches, the absence of frosts, excepting along some of the streams, the abundance of sunshine and fertility of the soil, supply the requisites for successful cotton production. The production of cotton in Swaziland in 1924 was only one-third of the crop expected owing to the very heavy rains.

(iv) *Tobacco.*—For the production of bright or yellow leaf, the soil, on the whole, is not suitable, though there are restricted areas which are suitable for the production of this type of leaf. The dark or heavy types of leaf are believed to be best suited to the soil conditions, although cigar tobacco is worth a trial. In the Lebombo flats and on the Lebombo there are considerable areas which will produce good bright tobacco.

In 1920–21 the tobacco production of Swaziland was 285,720 lb.; in 1922, 273,970 lb.; in 1923, 322,350 lb.; and in 1924, 278,500 lb.

3. **Forest Resources.**—The whole of the low veld is heavily bushed, and isolated forests or " bushes " exist in kloofs in the Drakensberg Range. There are no indigenous timbers in sufficient quantities to repay exploitation commercially, except for rough purposes, such as timbering mines. Gums and wattles thrive well in the mountainous parts of the west.

4. **Diseases of Animals.**—The diseases most prevalent are tick-borne diseases, i.e. East Coast fever, ordinary redwater, anaplasmosis, and heartwater. Owing to the dipping facilities in the country, none of these diseases constitutes a deterrent to ranching.

(i) *East Coast Fever.*—Since the dipping operations were commenced in 1911, East Coast fever, which was then prevalent over the whole country, has practically disappeared. The outbreaks and deaths from this disease are shown in the following table :—

	Outbreaks.	Deaths.
1915	43	392
1916	21	312
1917	6	10
1918	2	1
1919	3	61
1920	1	10
1921	4	361
1922	3	466
1923	4	253
1924	4	274

(ii) *Ordinary Redwater, Anaplasmosis, and Heartwater.*—These diseases are also controlled by the regular dipping insisted upon.

(iii) *Blackquarter.*—This appears to be on the decrease. General preventive inoculation is being introduced, and where it has already been carried out, the results are excellent.

(iv) *Horse-sickness.*—The virulency of this disease depends upon the rainy season and the altitude. It was very prevalent during 1924.

(v) *Anthrax.*—One outbreak occurred. Inoculation is being carried out.

5. **Government Agricultural Farm.**—An agricultural and experimental farm, where it will be possible to train the natives in improved methods of cultivation, and the production of pure breeds of the best and most suitable seed maize, cotton, tobacco, etc., has been established.

A bacteriological laboratory has been erected. This will enable the local conditions of human and stock diseases to be more easily examined than is possible at present.

6. **Game.**—The following antelope are represented in Swaziland, viz. :—

Kudu.	Impala.	Duiker.
Inyala.	Reedbuck.	Red duiker.
Roan antelope.	Bushbuck.	Blue duiker or piti.
Blue wildebees.	Mountain reedbuck.	Klipspringer.
Waterbuck.	Vaal rhebuck.	Steenbuck.
Sassaby.	Oribi.	Sharpe's steenbuck.

From time to time a few elephant, rhinoceros, hippo, and zebra come into Swaziland from adjoining territories.

Game birds are well represented and comprise a large number of species of *Francolin* partridges and pheasants and guinea-fowl.

7. **Fish.**—There are several varieties of freshwater fish in the rivers of Swaziland, and tiger fish are found in the Usutu, Black Mbuluzi, and Lomati Rivers. Trout ova are being introduced from the hatcheries in the Cape. Sir Robert Coryndon introduced some trout fry in 1908, which were put in the Black Mbuluzi River in October of that year. Further stocking is taking place with good results.

§ 10. Mining and Industrial Activities.

1. **General.**—Mining in Swaziland is carried out under the authority of concessions granted by the late Swazi king Mbandini. These concessions are subject to the payment of certain royalties and a profits tax.

There are at present four companies engaged in mining in the Territory. They are mining for *alluvial tin* in the vicinity of Mbabane, where it is found in payable quantities. *Gold mining* was carried on for some years at the Pigg's Peak and other mines, but owing to the increased cost of this class of mining little work is being done. The Crown owns a few mineral areas, and legal provision has been made for the exploitation of these by

the public in the event of payable minerals being discovered. Considerable quantities of gold have been recovered from the Forbes Reef and Pigg's Peak Mines on the west; and there appears to be no reason why further exploitation of this known mineralized area should not take place at an early date in the future. Large deposits of *coal* exist in the *low veld;* but beyond prospecting operations nothing has been done to exploit these.

2. **Mineral Production.**—The following table shows the output of tin and gold:—

MINERAL PRODUCTION OF SWAZILAND, 1910–11 TO 1924.

Year.	Cassiterite Tin.		Fine Gold.	
	Quantity.	Value.	Quantity.	Value.
	Tons.	£	Oz.	£
1910–11 (31st March)...	476	42,250	13,543	57,530
1911–12 („)...	313	32,397	14,781	62,783

§ 11. Trade.

1. **Regulation of Customs.**—By an agreement with the Government of the Union of South Africa, dated 30th June, 1910, Swaziland is dealt with, for Customs purposes, as part of the Union. Payments due to Swaziland are assessed on the proportion which the average of the collections for the three years ended 31st March, 1911, bears to the total Customs collection of the Union in each year. No statistics of imports and exports are now kept. The imports consist principally of maize, flour, groceries, wearing apparel, hardware, spirits, tobacco, and kaffir truck, while the principal export is cassiterite tin.

The revenue received by Swaziland from these sources during the last six years is shown hereunder:—

1918–19.....	£10,497
1919–20.....	10,372
1920–21 (31st March, 1921).....	14,343
1921–22 (31st March, 1922).....	11,094
1922–23 (31st March, 1923).....	11,299
1923–24 (31st March, 1924).....	13,500

2. **Trade and Cost of Living.**—There has been little variation in the imports owing to the small European population, and to the elementary requirements of the natives. The volume of trade is small.

The cost of living has increased and prices generally are high, largely owing to the cost of transport of goods from distant railheads.

The following were the average prices of foodstuffs obtaining throughout the year 1924:—

	£	s.	d.
Flour.....per bag 196 lb.	4	10	0
Maize.....per bag 200 lb.	1	10	0
Kaffir corn.....per bag 200 lb.	2	0	0
Potatoes.....per bag 150 lb.	1	10	0
Butter.....per lb.	0	3	6
Milk.....per quart	0	0	6
Rice.....per lb.	0	0	8
Sugar.....per lb.	0	0	5
Bread.....per lb.	0	0	9

	£	s.	d.
Beef.....per lb.	0	0	9
Mutton.....per lb.	0	0	11
Cheese.....per lb.	0	2	6
Eggs.....per doz.	0	2	6
Cattle.....per head	5	0	0
Horses.....per head	15	0	0
Sheep.....per head	1	0	0
Goats.....per head	0	10	0

§ 12. Roads and Principal Routes of Communication.

There are no railways in the Territory, and the lack of them has hindered the development of the country. Farmers are unable to find a market for their produce except amongst the Swazis, whose needs, outside the maize supply, are small.

The main roads in the Territory are kept in as good repair as possible, but a good deal remains to be done in improving and extending means of communication generally.

There are good roads to Mbabane from Ermelo, Breyten, or Carolina, and there is a fairly good road from Mbabane to Delagoa Bay. It is possible to motor through Swaziland from the Transvaal to Delagoa Bay, and, with the improvements now taking place to the through road, both in the Transvaal and in Swaziland, this route will no doubt be largely made use of in the winter months. The main port of entry for the southern portion of Swaziland is from Piet Retief, whence roads extend to Mankaiana, Hlatikulu, and elsewhere in the southern districts.

§ 13. Posts, Telegraphs, Telephones, and Savings Banks.

1. **General.**—By Proclamation No. 5 of 1907, the High Commissioner is empowered from time to time to enter into agreements with the Government of the Transvaal, for the carrying out by the said Government of postal and telegraph services and for the carrying on of post office savings banks. These services are now, by agreement, under the control of the Postmaster-General of the Union, but are paid for from Swaziland funds.

2. **Post Offices.**—At the end of the financial year 1924 there were seventeen post offices. and the following is a summary showing the numbers of offices in the different classes :—

Post offices	17
Money order and savings bank offices	4
Telegraph and telephone offices	7

3. **Mail Services.**—The following is a list of the mail services in operation at 31st March, 1924 :—

Route.		Times Weekly.	Conveyance.	Time (Hours).	Cost per Annum.
					£
Bremersdorp	Stegi	1	Pack Donkeys.	30	36
Piet Retief	Hlatikulu	2	Motor.	5	245
Dwaleni	Berbice	2	Foot.	4	—
Hlatikulu	Mooihoek	2	,,	4	18
Hluti	Mhlotsheni	2	,,	9	—
Mankalana	Piet Retief	2	,,	12	75
Bremersdorp	Carolina	2	Motor.	9½	640*
Mbabane	Forbes Reef	2	Foot.	4	24
Piggs Peak	Barberton	3	,,	14	168
Sandhlan	Amsterdam	1	,,	6	—
Stegi	Portuguese Border	3	,,	6	72
Bremersdorp	White Mbulazi	2	,,	6	48
Berbice	Mhlotsheni	2	,,	4	15
Malkerns	Ezulweni	2	,,	4	24

* An additional amount of £416 is contributed by the Union Post Office.

4. **Revenue Collections and Expenditure.**—The revenue collected during 1924–25 amounted to £3,469, as against £2,984 in 1923–24. The expenditure was £3,301.

5. **Postal Orders.**—The number of postal orders sold during 1924–25 was 11,258, valued at £5,076, with a total poundage of £49. 2,692 orders were paid out, to the value of £1,491.

6. **Money Orders.**—The number of orders issued in 1924–25 was 585, to the value of £3,160, and the commission collected amounted to £28. The number paid out was 466, valued at £3,320.

7. **Savings Bank.**—The number of depositors in 1924–25 was 248, and the amount standing to their credit at the end of the year was £1,553. Withdrawals totalled £1,210 The rate of interest is 3 per cent. on ordinary account and 3½ per cent. on certificate accounts.

8. **Telegrams.**—Telegraph receipts amounted in 1924–25 to £828, against £591 in 1923–24. The number of telegrams forwarded from the Swaziland offices was 12,066, of which 9,607 were " paid " messages, 80 cablegrams, and the rest were Government telegrams ; 9,746 messages were received during the year.

9. **Telephones.**—The amount representing call office receipts was £66.

10. At Mbabane, the postmaster and assistant, who form the staff, are Union Government officials, while elsewhere the post office work is done by local business people.

§ 14. Public and Private Finance.

1. **Public Finance.**—The following statements show the revenue, expenditure, and public debt of Swaziland :—

(i) REVENUE.

Revenue	Financial Year.					
	1918–19.	1919–20.	1920–21.	1921–22.	1922–23.	1923–24.

(v) PUBLIC DEBT.

Swaziland Consolidated Loan..... £35,000
Interest 4 per cent. per annum; repayable in nineteen years from 1st April, 1924; Proclamation No. 6 of 1924.
Swazi Nation Trust Fund..... £20,000
Interest 4 per cent. per annum; Proclamation No. 9 of 1906.

2. **Banking Facilities.**—The National Bank of South Africa, Limited, has branches at Mbabane and Hlatikulu.

The head office of the National Bank of South Africa, Limited, is at Pretoria. The bank-note issues, etc., are carried out under Union laws.

APPENDIX.

CHAPTER XXIII.

§ 5. Assurance.

2. **Statistics of Insurance, 1924.**—The following details have been extracted from the summaries of returns deposited with the Treasury by the Insurance Companies during the year ended 31st December, 1925 (U.G. No. 34, 1926). Practically all the returns refer to the year ended 31st December, 1924. The total assets in the Union of all insurance companies operating in the Union were £30,149,887.

During the year £3,662,710 were received in life insurance premiums, £965,258 were paid out on claims on death, £669,899 on maturity, £672,275 on surrenders, including bonuses, and in reduction of premiums, and £386,138 for commission.

(1) STATEMENT OF LIFE, INDUSTRIAL, AND ANNUITY BUSINESS IN THE UNION IN 1924. THE SUMS INSURED ARE EXCLUSIVE OF BONUS ADDITIONS AND ALL ITEMS ARE NET (AFTER DEDUCTION OF REINSURANCE).

	Number.	Sum Insured.	Single Premiums.	Annual Premiums.
		£	£	£
